CIRCLE 377 ON READER SERVICE CARD

# If flying your IBM® PC got any more realistic, you'd need a license.

You took off from Boston-Logan with nothing above you but blue sky. Now you're 5,000 feet over Long Island Sound, and New York-La Guardia, your destination airport, reports high winds. Connecticut-Bridgeport is the logical alternate, but clouds with a low ceiling are going to make life difficult. You're in for an instrument approach...

**The plane inside your PC.** Run the Microsoft® Flight Simulator on your IBM Personal Computer, and put yourself in the pilot's seat of a Cessna 182. You control everything from flaps and ailerons right down to the magneto switch. You can even navigate using radio signals and fly totally by instruments if you run into bad weather. Best of all, Flight Simulator features a full-color, out-the-window flight display. With detailed graphics that closely simulate a pilot's actual perspective.

**The world beneath your fingers.** Once you're in flight, don't worry about running out of airspace. You can take off and land at over 20 airports from Los Angeles to New York. Each, with its own particular set of challenges.

**The learning curve.** In its "easy" mode, the Flight Simulator gives new pilots an aircraft which readily forgives errors in flight, engine control, and navigation. As you

Color display is generated only when a color composite type monitor is used. Black and white display is generated when an RGB monitor is used.

gain skill, move into "reality" mode. Then get ready for simulations of everything from running out of fuel to carburetor icing.

**The Ace in your soul.** When you think you've earned your wings, turn the clock back for a round of "British Ace." Fly into a World War I air battle complete with scouting flights, bombing runs and hair-raising dogfights. Destroy your targets, shoot down the enemy fighters, and you just might survive to be decorated.

**Throttle on.** Take a test flight at your computer store or software dealer. Once you've been aloft, you'll want to buckle up behind your own IBM PC with the Microsoft Flight Simulator. It's the closest you can get to flying. Without leaving your nest.

# the Apple-IBM connection

## Upgrade Your Apple VisiCalc Models to IBM 1-2-3.

For thousands of computer users across the nation, the Apple-IBM Connection™ is the simple, reliable way to transfer all kinds of spreadsheet files between Apple II's™ and IBM PC's.™

Because unlike any other transfer method, only the Apple-IBM Connection accurately transfers everything — including formulas — precisely the way they were written on one computer to exactly the way they should be on the other.

No retyping. No reformatting. No errors or omissions.

So what started out as a fully developed spreadsheet on your Apple ends up as the same spreadsheet on your IBM PC. Now you can transfer Apple VisiCalc files to the powerful second generation spreadsheets, including 1-2-3,™ MultiPlan,™ IBM VisiCalc,™ and VisiCalc IV.™ And to integrated environments like Visi-On.™

And it works equally well with ASCII, database, word processing and source code files.

Start transferring files the easy, sensible way. With the new Apple-IBM Connection from Alpha.

Call us today toll free at 1-800-451-1018 (in Massachusetts call 1-617-229-2924 collect) for the name of the Alpha Software Dealer nearest you.

### System Requirements:

Apple II+ or Apple IIe with 64K and one of the following:

- Hayes Micromodem II
- Mountain CPS Card
- CCS Card (model 7710)
- Apple Super Serial Card
- IBM PC or XT with 96K and any RS-232 card.
- The new Apple-IBM Connection also supports external Hayes Smartmodem and acoustic modems.

**The Apple-IBM Connection - \$250.**

# INTRODUCING DATA BASE MANAGER II™ FROM ALPHA.

## IT'S FOR PEOPLE WHO HAVE THEIR OWN IDEAS ABOUT WHICH SOFTWARE SHOULD BE INTEGRATED.

Here's a proposition for you.

First thing tomorrow, throw out at least one of your favorite computer programs. Maybe your word processor. Maybe your spreadsheet. Maybe both. Just make sure it's something you like, and that you've spent some time learning it.

Now, start from scratch with programs you don't know. Ones that force you to give up features you depend on now.

Interested?

Well, if you plan to get in on the current "integrated" software rage, that's what you'll have to do. Because most integrated software systems only work with software from one manufacturer.

If you think that's too much to ask, then Data Base Manager II from Alpha is for you.

It starts by giving you an enormously powerful and elegantly approachable data base system. One that's menu driven and responds to simple, English-like commands. But one that's also truly fast. With all the advanced features you'd expect from a top-notch data base management system.

Plus, you get extended DBMS features like phonetic word search, built-in form letter, and date calculations. And a painless way to file data transferred to your PC from other micros, mainframes or information utilities.

And then it lets you do something else. It lets you totally integrate your word processor, and your spreadsheet program, instantly.

So you can quickly call up and manipulate any information. Then move it over to VisiCalc,® 1-2-3™ or Multiplan™ for calculations. Then shuffle it over to WordStar,® EasyWriter™ or Volkswriter™ for

word processing. Without re-entering data. And without complex commands.

In fact, Data Base Manager II lets you integrate nearly any combination of the word processing and spreadsheet programs that run on the IBM PC or XT.

The prestigious software journal, *The Rosen Electronics Letter*, says Data Base Manager II's unique capabilities "unify some of the best of the productivity packages already on the market... This is a signal achievement."

You'll say that this is the way personal computing is supposed to work in the first place.

See the remarkable new Data Base Manager II today. Call us toll-free at 1-800-451-1018 (in Massachusetts call 1-617-229-2924 collect) for the name of the Alpha Software Dealer nearest you.

ACCOUNTS RECEIVABLE ☐ ORDER ENTRY ☐ INVENTORY CONTROL  
SALES ANALYSIS ☐ ACCOUNTS PAYABLE ☐ GENERAL LEDGER ☐ PAYROLL

**W**hatever the product or service, it takes experience to produce quality and lasting value.

There are no inexperienced master violin makers. And so it is with software.

The staff at RealWorld Corporation have been creating packaged software products for nearly ten years. During that time, over 40,000 users have kept us in touch with reality.

We don't sell "disposable software". We haven't tried for the fanciest packaging. We won't promise "anyone can master it in ten minutes".

Mature accounting software just isn't like that.

But we will say this:

If your accounting needs are typical, and if you are willing to invest the time to read and follow our clearly written instruction manuals, RealWorld Software can work for you.

Visit your local computer store for more information, or call one of our 800 numbers for the authorized reseller nearest you.

## PRO COLUMNS

### WRITING

#### The Researcher's Assistant ..... 409

*Bryan Pfaffenberger*/Three integrated programs that can help the harried report writer produce work with more efficiency and fewer headaches.

### ENGINEERING

#### Engineering Software Exchange ..... 413

*Nicholas Basta*/An enterprising couple is publishing a newsletter for computer-wary engineers.

### DESIGN

#### Stepping Up To Draft-Aide ..... 421

*Stephen B. Gray*/Draft-Aide, a new graphics program for the PC, fills the drafting needs of both students and professionals.

### MEDICINE

#### The Doctor's Experience ..... 427

*Kevin M. Hepler, M.D.*/E-Book helps physicians computerize their patient records and streamline the detailed business of medical practices.

### BUSINESS

#### Maxi-Value From A Mini Ledger ..... 433

*Sam Perkins*/Accounting software for the small business owner with limited computer access.

### LANGUAGES

#### Grandfather FORTRAN ..... 521

*John R. Witschke*/Amidst a flock of new languages, FORTRAN has been holding its own.

### TELECOMMUNICATIONS

#### The Source For Magazines ..... 525

*Alfred Glossbrenner*/Two new on-line journals, Real Times Magazine and the IBM PC Gazette, offer user news and reviews for PC owners.

## DEPARTMENTS

### WHAT'S INSIDE ..... 15

#### PC NEWS ..... 33

Twelve pages of up-to-the-minute reports, interviews, mini-reviews, and useful tips, along with entertaining tales and fables from the computer community. Among this issue's stories:

- War of the Windows: VisiCorp Versus Microsoft
- TK! Solver update review

#### FROM THE EDITOR'S SCREEN

#### A New Year And A New Look ..... 69

*Bill Machrone*/PC Magazine greets 1984.

#### LETTERS TO PC ..... 75

#### THE NORTON CHRONICLES

#### Two Faces Of PCjr ..... 109

*Peter Norian*/Looking to both business and home applications.

#### GUEST EDITORIAL

#### Putting Conscience Into Computing ..... 99

*Jay Bloombecker*/Users must learn how to control computer crime.

#### SANDLER'S SCREEN

#### Making Peace With 1984 ..... 381

*Carey Sandler*/Coping with the coming of Orwell's world.

#### PC ARCADE

#### It's Not Easy Being Green ..... 391

*Stephen Manes*/One Hundred and One Monochrome Mazes—for less colorful computeries.

#### BOOK REVIEW

#### Living And Communicating With Computers ..... 399

*J. Scott Earle and Lisa Ellen*/Electronic Life and The Complete Handbook of Personal Computer Communications

### NEW ON THE MARKET ..... 439

*Dave Obregon*

#### USER-TO-USER ..... 469

*Paul Samerson*/PC owners share their tips and short programs.

#### CLUB NEWS ..... 477

# HERCULES<sup>™</sup> is the only graphics card that can run 1-2-3 on IBM's monochrome display.

## And that's just for starters.

You don't have a Hercules Graphics Card? Then unfortunately you won't be able to run 1-2-3, including all its graphics, on IBM's monochrome display. And you'll miss out on all the other reasons why there are more Hercules Graphics Cards producing more high resolution graphics than any other add-on card for the IBM PC.

But don't take just our word for it. If you need convincing, remember that most of the IBM PCs at Lotus<sup>™</sup> are running Hercules Graphics Cards. And the authors of 1-2-3 know a good card when they see one. Or consider that the Hercules Graphics Card is widely used at Rockwell, Mass Mutual, and Carnegie Mellon. They couldn't all be wrong, could they?

At \$499, we think the Hercules Graphics Card offers the best price/performance ratio of any graphics card available today. As you can tell, plenty of users agree with us.

Call or write for our free information kit. You'll see why the first graphics card for the IBM PC is still the best. Hercules Computer Technology, 2550 Ninth St., Suite 210,

Berkeley, California 94710.  
Telephone: (415) 540-6000.

**Hercules. We're strong on graphics.**

©1983 Hercules Computer Technology.

The Hercules Graphics Card offers 720 x 348 graphics resolution on IBM's monochrome display, compatibility with text mode software, a parallel printer port, software to use BASIC's graphics and a two year warranty. A graphics subroutine library with screen dump is available separately for \$50. Graphics software that is compatible with the IBM color graphics card but does not have a Hercules compatible version will not run on the Hercules Graphics Card. Foreign Distributors: Reflex/U.K.; Computer 2000/W Germany; Edisoft/France. Hercules Graphics Card is a trademark of Hercules Computer Technology. IBM is a registered trademark of International Business Machines. 1-2-3 and Lotus are trademarks of Lotus Development.

# No other financial software even comes close.

## Now Financier II

The financial software that has met with resounding approval from professional software reviewers just got even better. Now, the Financier Personal Series has been upgraded to Financier II. Combined with Financier's Tax Series and Investor's Series, it creates a totally integrated financial management system. Financier II is so easy to use that it is ideal for personal finance yet powerful enough, and flexible enough, to function as a small business system.

**It is clear that the Financier Personal Series is the most sophisticated and flexible of the financial programs under review here.**

Burton Alperson, Ph.D.  
Reviewer, SOFTALK  
June, 1983

Financier II features enhanced graphics capabilities, and expansion of Financier's unique auto-checking capability which prints checks directly from a user-maintained database, while updating bank, budget and tax records. Additionally, it provides a full range of professional-caliber financial statements including net worth, and cash flow reports. You can even opt for double-entry accounting methods, if desired.

## Introducing Financier II

**Now you can have a completely integrated financial software system.**

**Out of all these programs,\*\* the Financier Personal Series provides the best balance of extensive capabilities and ease of use. The manual is outstanding as an introduction to both the practice of bookkeeping, and the use of a personal computer to perform this task.**

Steven Yoder and  
Sherry Knight, CPA  
PC Magazine, February, 1983

**Financier II is remarkably easy to use. You don't have to be a computer whiz-kid to use Financier II. That's because it's menu-**

**driven. When you need to enter data, just fill in the blanks on the preformatted screen. If you can use an automatic teller machine, you're well on your way to mastering this unique financial software.**

Another thing that puts Financier II so far in front of any other financial software package is that it offers powerful tax and inventory functions. In fact, Financier II allows you to maintain literally thousands of these accounts, if you desire. And, each account is separately manageable.

**"Thus far, no other software company has matched Financier's interlocking combination of a powerful tax-planning package (Tax Series) and a year-round record-keeping program (Personal Series)."**

Augustin Hedberg  
Money, June, 1983

## Financier Tax and Investor's Packages.

Financier's Tax and Investor's Series provide the perfect adjunct to Financier II.

Financier's Tax Series lets you create multiple tax cases, and store them for later adjustment. You can even perform "what-if" spreadsheet calculations, generate graphics and print charts.

Financier's Investor Series is a comprehensive portfolio management system that lets you maintain a data base on each security account, each security position, and each security transaction.

## Financier Offers Something for Everyone.

Individuals, businessmen, tax preparation specialists, investors or anyone who wants real financial control cannot afford to miss out on Financier's powerful software packages.

Get the most from your personal computer with the financial software that does the most. Financier II, and Financier's Tax and Investor's Series.

# "I GOT WHAT I WANTED"

## PC TUTOR

Comprehensive Software

Who can blame him? With PC Tutor, you can get rid of all the confusing instruction manuals and learn about MS-DOS easily. Including an introduction to DOS, all about diskettes, disks, directories and files, DOS commands for directories and files, and DOS commands that control the system. Also how to use special keys and all about the line editor and the BATCH utility. PC Tutor makes learning easier, faster, cheaper.

Requires 64KB, 1 double-sided diskette drive, an 80-character display and MS-DOS.

**Suggested retail \$59.95. See your PC dealer. Dealer inquiries welcome.**

**Comprehensive  
Software  
Support**

2316 Artesia Blvd., Suite B  
Redondo Beach, Ca. 90278  
213/318-2581

## Good things come in 2s. The DMP-40-2 is a good example.

**TWO PENS**, poised and able, help you create vivid multicolor business graphics quickly and simply, or let you plot and draw different line widths for critical drafting applications.

**TWO FORMAT SIZES** give you the freedom to generate vibrant graphics for reports and presentations. The standard  $8\frac{1}{2} \times 11$ " format is ideal for use in the report body, while the larger size is suitable for foldouts and photo reductions. Both the standard and larger  $11 \times 17$ " formats are available in bond, vellum and acetate film (for colorful overlays or overhead transparencies). The two formats are interchangeable with drafting sizes A and B. No extra-cost accessories are needed when plotting on different surfaces.

**TWO INTELLIGENCE LEVELS** provide the flexibility to plot in either a 'smart' or incremental mode. With internal firmware that occupies 16-thousand bytes, the DMP-40-2 borders on brilliance. It's capable of automatically generating such complex figures as circles, arcs, ellipses and general curves with a single simple command.

More software is tailored to the Houston Instrument DMP-40 Series than for any other plotter. Well over a hundred programs are available, offered by scores of capable vendors. Each program has been configured in concert with Houston Instrument, so there are no rude surprises when you hit 'return.' Versatile programs for business graphics, investment analysis and computer-aided drafting are all available, with more added virtually on a daily basis.

Choose 2 for the show, and treat yourself to superior multi-color graphics at a very 'budget friendly\*' price.

For the name, address and phone number of your nearest distributor or dealer, write Houston Instrument, 8500 Cameron Rd., Austin, Texas 78753. Phone 512-835-0900 or 800-531-5205 if outside Texas. In Europe contact Bausch & Lomb Belgium NV., Rochesterlaan 6, 8240 Gistel, Belgium. Tel. 059-27-74-45, tlx 846-81399.

## houston instrument

\*Suggested US Retail \$995.  
Meets FCC class B requirements. UL Listed.

# No one else is using this simple method to teach you Lotus 1-2-3.

You didn't learn to swim by reading about it. You took the plunge. With a little extra support at first, 'til you could stay afloat on your own.

ATI's training software teaches you Lotus 1-2-3 in the same way.

The ATI training disk instructs by simulating the actual software. You practice each command by interacting with the screen, which responds just as Lotus 1-2-3 would.

It's faster—and easier—than any other method. Once you've learned the skills with our helping hand you're ready to swim on your own. Without sinking.

The ATI Training Power package for Lotus 1-2-3, with disk and handbook, is available at your computer dealer. Along with our line of training programs, based on the same simulation method, for other popular software.

Or, use the order form below to send for the ATI programs of your choice.

And dive right in.

Please rush me ATI Training Power™ programs, at \$75 each for this software:

## Textra<sup>TM</sup> word processing

The shortest distance between  
your thoughts and the printed word.

Your thoughts come faster than your words. Capturing them smoothly and quickly is the strength of Textra, and the secret behind its success.

Textra blends advanced features with a simplified design that makes it easier to write with your personal computer. And that's what word processing is all about.

Start with the 'on-line' tutorial, which has been called everything from elegant to excellent. It's the finest introduction to a software program ever filmed. You'll be ready to write in record time.

And Textra will be ready for you. Its highly responsive full screen editor helps you put your thoughts on the screen swiftly. Automatic reformatting and on-screen bolding and underlining show you what your printed text will look like at all times. You can even preview your pages *before* they're printed, so you only have to print them once!

Whether you're searching for your first word processor, or feel miserable with the one you have now, take a close look at Textra. Ask your dealer for a demonstration today.

It's guaranteed to open your eye.

# What's Inside

In addition to its new look and its twice-a-month frequency, PC brings you a host of new information, columns, departments, and features.

**W**elcome to the new, improved *PC Magazine*. We have taken great pains to make this issue the best in *PC*'s history. You will find new sections, new columns, a new appearance, and a new outlook to go with our new 26-times-a-year frequency.

Even our cover subject in this issue concerns something brand new—the PC family of personal computers, ranging from little *PCjr* for the home to the remarkably powerful XT 370 mainframe workstation. Contributing editor Peter Norton, whose expertise on PCs has become legendary, has been involved in developing software for the new *PCjr*, and in this issue he gives us his detailed views of *PCjr* sights, sounds, and performance characteristics. He also gets personal, providing his views of where the IBM home machine fits in the computer universe. Also, games expert and writer Phil Wiswell looks at the *PCjr*'s impact on the computer game business, which, it turns out, will be significant.

## New Senior Members

As important as the *PCjr* is for home use, the new XT/370 and 3270-PC members of the IBM computer family are equally important for offices, labs, and factories. These high-end extensions of the PC concept link IBM personal computing with the world's computer telecom-

munications system and with mainframes. Charles Daney, a telecommunications and 370 systems expert from California, gives a technical overview of the new PC additions. *PC* editor Bill Machrone and executive editor Connie Winkler put the high-level micros in their business perspective.

This issue, our first of the ominous year 1984, also includes a series of articles examining the effect of computers on our society today. Have computers helped make life like that projected in Orwell's *1984*? We offer views from civil liberties lawyer Dorothy Samuels, and Jay Bloom-

becker, director of the National Center for Computer Crime Data. Our world may be both more and less like the world of 1984 than we thought.

## Some New Regulars

Apart from the features, other exciting things are afoot in this issue of *PC*, including our new professional columns, guest editorial, a "PC News" section, and changes in the content and look of the magazine. Our guest editorial will open the pages of *PC* to opinions from the best known figures, the keenest minds, the most outspoken voices in IBM personal computing today. The growth of microcomputers and the increasing dominance of IBM in the micro marketplace has raised important issues that we think readers will want to see addressed by experts of all sorts.

Finally, this month we offer "PC News," an expanded section that includes our long-running "PC-Communiqués" pages. "PC News" is a late-closing, hot-item report, a place for us to handle previews, follow-ups and a bit of the absurd. This magazine-within-a-magazine will have a lively spirit and journalistic spunk all its own.

We hope you like our new magazine. We will be working to make it even better in the weeks ahead. Let us know what you think by writing us here at *PC*. ■

# THE WORLD'S BEST SELLING MULTIFUNCTION BOARD IS NOW EVEN BETTER

The new 384K Quadboard by Quadram is the most comprehensive board you can buy for the IBM PC or XT. Now with added hardware features and advanced software. But our same low price.

**NEW EXPANDED QUADBOARD** Quadboard now delivers 9 of the most needed PC functions/features. To let you get the most out of your Personal Computer. And help you work better and faster.

All of these features are standard on the new Quadboard:

- **Parallel Port:** With the new Quadboard, you get a Parallel Port. Perfect for operating most printers and other parallel devices.
- **Serial Port:** There's

a Serial Port, too. Fully programmable, use it to connect to plotters, modems, and other serial devices.

- **Chronograph:** And Quadboard's Chronograph (Real-time clock/calendar) keeps your system's clock up-to-date.

- **Game Port:** The new Quadboard has an IBM compatible Game Port. Plug in a joystick or game paddles, and fire away.

- **I/O Bracket:** Quadboard now comes with a special I/O bracket. Use it to organize your expansion port connectors. Snaps right onto the back of the PC.

EXPANDED TO  
**384K**

**NEW**

**\$295**

Socketed with no RAM installed

# QUADBOARD™

• **Expandable to 384K:**

The new Quadboard is expandable in 64K increments for up to 384K additional RAM. With full parity checking standard. With the new Quadboard and a fully populated system board, you can take your PC's memory up to the 640K limit.

• **QuadRAM Drive:** Plus, with Quadboard you get advanced QuadMaster Software. Including the QuadRAM Drive program. Use it to set up multiple RAM Drives in Quadboard memory. Solid state drives that let you store and retrieve data quickly and easily. Or take advantage of QuadMaster disk caching. To access frequently

used data whenever you need it.

• **MasterSpool:** QuadMaster Software also includes MasterSpool. Use it to set up a software print buffer quickly and easily. This advanced spooler lets you pause at any time, back up or move forward in a file. Choose just the amount of buffer space you need and stop waiting on your printer.

• **Qswap:** Another feature of QuadMaster Software is Qswap. With Qswap change line printers 1 and 2 back and forth, with just a few keystrokes, as often as you like.

**QUADBOARD STANDS OUT FROM THE PACK**

Now more than ever Quadboard is the first and only board your IBM PC or XT may ever need. No other board even comes close. Because Quadboard is designed for performance. Engineered for dependability.

And built in the continuing tradition of Quadram Quality.

There are many imitators, but only one leader. So make sure you ask for Quadboard by Quadram, the leader in micro-computer enhancement products.

Compare. See why more Quadboards are bought than any other multifunction board...

# Introducing COMPAQ PLUS, the first high-performance portable personal computer.

The makers of the COMPAQ™ Portable Computer, the industry standard, announce another breakthrough—the COMPAQ PLUS™. Portable Personal Computer. No other personal computer can handle so much information in so many places.

The new COMPAQ PLUS offers the power of an integrated ten-megabyte fixed disk drive in a portable. You get problem-solving power that no other personal computer can match.

## Plus a bigger payload

How much is ten megabytes?

Enough to tackle jobs that can't be conveniently handled on most personal computers.

used programs and data can be permanently kept in the COMPAQ PLUS, ready to call up and run.

With programs permanently stored, the COMPAQ PLUS becomes a well-informed traveling companion, a tool to help you apply your best thinking anytime, anywhere.

You could store a complete library of accounting programs on the disk—payables, receivables, general ledger, and payroll—with the company's books.

You could store an inventory control program with your inventory records and a list management program with your mailing list and a filing program with your personnel files.

The COMPAQ PLUS is also equipped with a 360K byte diskette drive for entering new programs, copying data files, and making backup copies.

## Plus more programs

More programs means more versatility. And the COMPAQ PLUS is impressively versatile because it runs all the popular programs written for the IBM® Personal Computer XT, available in computer stores all over the country. And they run as is, with no modification whatsoever.

And the high-capacity portable multiplies the productivity of every program it runs. Your inventory and its

control programs can go with you to the factory. Your books and your accounting programs can go with you to a board meeting. Your building specs and your project management programs can go with you to the construction site.

You're buying a computer to solve problems. Why not have more problem-solving programs to choose from?

*Specialty designed shock isolation system protects the fixed disk from jolts.*

## Plus a traveler's toughness

Life can be tough on the road. A true portable has got to be tougher. The COMPAQ PLUS is.

Its integrated fixed disk drive is unique, designed specifically to travel. Rough roads and hard landings don't bother it because of a specially designed shock isolation system that protects the disk from jolts and vibration.

All the working components are surrounded by a uniquely cross-membered aluminum frame. This structure, common in race car design technology, strengthens it side-to-side, front-to-back, and top-to-bottom.

The outer case is made of LEXAN®, the same high-impact polycarbonate plastic used to make bulletproof windows and faceplates for space suit helmets.

Does a portable personal computer really have to be this tough? Take a good look at your briefcase and then decide.

*Information that would fill your company's ledgers can be stored on the fixed disk drive of the COMPAQ PLUS.*

A mailing list of 100,000 names, addresses, cities, states, and Zip codes.

A full year of daily prices for every stock on the New York exchange.

Inventory records on a quarter million items.

The entire San Francisco phone book. And room left over for Peoria.

The fixed disk drive keeps all the information seconds away, ready to be searched, sorted, retrieved, analyzed or updated.

## Plus better use of your time

The integrated fixed disk drive will store programs. That means your most

*The COMPAQ PLUS runs all the popular programs written for the IBM Personal Computer XT.*

### Plus ease of use

The COMPAQ PLUS is big where it counts.

The display screen is big. Nine inches diagonally. Big enough to show a full 25-line-by-80-character page that's easy to read even if you're leaning back in your chair.

The keyboard is full-sized and typewriter-style for easy control.

With its built-in display, the COMPAQ PLUS makes a smooth, low profile on your desk, not an obstacle that you have to talk around.

### Plus an easy way to get started

If you're buying your first personal computer and you're not sure how much capacity you need, your choice is easier now.

Start with the COMPAQ Portable with single or double 320K byte diskette drives. If you need more capacity later, upgrade to the COMPAQ PLUS. A conversion kit is available that turns the COMPAQ Portable into a COMPAQ PLUS, complete in every detail and capability.

### Plus a lot more

The COMPAQ PLUS also works with optional printers, plotters, and communications devices designed for IBM's personal computer family.

It has two IBM-compatible slots for adding optional expansion boards. With companion programs, they'll let you share information with a network of personal computers in your office, communicate with your headquarters computer files while you're away, or add memory capacity if your needs grow.

The COMPAQ Portable, the industry standard in portable personal computers. ▼

The problem-solving power of a high-performance desktop personal computer can now go where you need it.

It's got high-resolution graphics and text on the same screen. A detached keyboard. Programmable function keys. Expandable memory. Dozens of other features that simply make it do a better job of personal computing.

And when you see all that the COMPAQ PLUS has to offer, you'll be pleasantly surprised by the price. The fact is, it costs hundreds less than comparably equipped desktop personal computers.

See the first high-performance portable personal computer. The COMPAQ PLUS—performance, programs, productivity. Plus problem-solving power.

The new COMPAQ PLUS, the first high-performance portable personal computer. ▼

### COMPAQ PLUS Specifications

#### Storage

- ☐ One integrated 10-megabyte fixed disk drive
- ☐ One 360K byte diskette drive.

#### Software

- ☐ Runs all the popular programs written for the IBM XT.

#### Memory

- ☐ 128K bytes RAM, expandable to 640K bytes

#### Display

- ☐ 9-inch diagonal monochrome screen
- ☐ 25 lines by 80 characters
- ☐ Upper- and lowercase high-resolution text characters
- ☐ High-resolution graphics

#### Interfaces

- ☐ Parallel printer interface
- ☐ RGB color monitor interface
- ☐ Composite video monitor interface
- ☐ RF modulator interface

#### Expansion board slots

- ☐ Two IBM-compatible slots

#### Physical specifications

- ☐ Totally self-contained and portable
- ☐ 20"W x 8½"H x 16"D

# Incredible Trainers!

No matter what level IBM Personal Computer training you want, our interactive tutorial software gives you the answers. Easier, faster, smarter.

Take **The INSTRUCTOR**, for first-time users. PC Magazine called it, "The best . . . introduction to the PC around." It's #1 because it takes the work out of learning initial PC operations.

And Now! Brand New! Setting a new standard for interactive training, we give you . . .

## PROFESSOR DOS.

You've got to see (and hear) it to believe it! Designed for PC users ready to learn higher level PC concepts, including DOS commands.

Professor DOS will challenge you, amuse you, and amaze you.

Both programs use vivid graphic images, creative animation, sound and living color to take you from mystery to mastery of your IBM PC. Each is totally self-paced. And they're "people-literate." So you really do learn.

The most sought-after computer-

assisted training anywhere. Available at IBM PC dealers and software retailers everywhere, separately or in a tutorial set. Affordable at a suggested list price of **ONLY . . .**

**\$44.95 — The INSTRUCTOR**

**\$59.95 — Professor DOS**

or

**\$94.95 — Tutorial Set**

We've made **The INSTRUCTOR** and **Professor DOS** so realistic, you'll agree . . . **THEY'RE INCREDIBLE!**

An Industry First in Word Processing Software:

# WordPlus-PC™ featuring the BOSS.™

## Word processing so smart it can even spell 100,000 words.

Meet the BOSS. WordPlus-PC's incredible new Built-in On-line Spelling System.

### WORD PROCESSING AND SPELLING COMBINED:

WordPlus-PC featuring the "BOSS" is a whole new technology in word processing software. Finally, the most powerful word processing capabilities have been combined with a built-in electronic spelling system which not only checks your spelling but also corrects your spelling.

The "BOSS", an acronym for Built-in On-line Spelling System, eliminates embarrassing spelling errors in your letters and stops time consuming trips to the dictionary.

But WordPlus-PC featuring The "BOSS" will do far more than just check and correct your spelling. It's been designed to be exceptionally easy to use and yet contain all the powerful features you expect and more. Like built-in mail merge for personalized form letters, invoice generation and the ability to merge information created by most other popular programs such as 1-2-3™ and dBASE II®. And if you have a question, just press the HELP key to get back on track.

You can also print bar graphs and other charts; \* easily move columns, scroll horizontally, execute global search and replace, boilerplate text, and even print proportionally spaced on selected printers. And WordPlus-PC is compatible with virtually all popular letter-quality and dot matrix printers.

\*With 90,000+ word standard dictionary and ability for a user to add over 10,000 "custom" words.

### HERE'S HOW THE BOSS WORKS FOR YOU:

#### IT CHECKS

Thank you for your interest in WordPlus-PC. As you know, WordPlus-PC is a whole new technology in word processing software. Finally, the most powerful word processing capabilities have been combined with a built-in electronic spelling system which not only checks your spelling but also corrects your spelling.

At the touch of a button, virtually anytime during typing or after the creation of a document, The "BOSS" locates and highlights misspelled words on your screen. The "BOSS" can even check the spelling of a word directly after it's been typed in.

#### IT SUGGESTS

Thank you for your interest in WordPlus-PC. As you know, WordPlus-PC is a whole new technology in word processing software. Finally, the most powerful word processing capabilities have been combined with a built-in electronic spelling system which not only checks your spelling but also corrects your spelling.

When a word is misspelled, the user can ask The "BOSS" for suggestions as to how to correctly spell the word. With only one keystroke, The "BOSS" will display, in a dynamic on-screen window, up to eight spelling suggestions in the order of probable phonetic correctness.

#### IT CORRECTS

Thank you for your interest in WordPlus-PC. As you know, WordPlus-PC is a whole new technology in word processing software. Finally, the most powerful word processing capabilities have been combined with a built-in electronic spelling system which not only checks your spelling but also corrects your spelling.

And The "BOSS" Auto Correct feature enables users to "fix" these misspelled words directly in text with a single keystroke. The "BOSS" is a total spelling system that Checks, Suggests, and Corrects your Spelling. All built-in.

### THE TOTAL WORD PROCESSING SOLUTION — PLUS ALL THE HELP YOU'LL NEED.

With over 70,000 word processors in use worldwide, Professional Software, Inc. has designed WordPlus-PC to contain all the powerful features you expect — and to be the easiest word processor to use anywhere. But there will always be questions. That's why

Professional Software has an entire bank of Nation-wide TOLL FREE customer HELP lines to support our registered users. This service is available at No Charge during the 90 days following the receipt of your registered users card.

**Demand to see the BOSS in person**  
Visit your local professional computer dealer or call us toll free for the dealer nearest you. Once you witness the BOSS in action, you'll see that all other word processors have become totally obsolete.

**Demand to see the "BOSS" today! Call us toll free, 1-800-343-4074.**

bar graphs and other charts can be printed inside text.

# QuadDisk™ by Quadram™

Quadram™ presents QuadDisk™. The new hard-disk system.

QuadDisk gives you maximum storage capacity in the limited space you've got. Turning your IBM™ Personal Computer, PC XT, Compaq™ Chameleon,\* or Eagle\* computer into a micro powerhouse.

## Choose from 6 to 72MB Fully Integral

QuadDisk comes in 6, 12, 20, 27, or 72 megabyte capacities. All integral to the computer for fast, convenient data access. And for added flexibility, there's QuadDisk with removable cartridges. For up to 6MB on-line storage plus added data security. (Not to mention virtually unlimited off-line storage.)

QuadDisk comes complete with disk controller board for total system integration.

## Keep your personal computer personal

QuadDisk delivers all this power without turning your computer into a main frame. QuadDisk is compact. It installs in the same space as your floppy unit to become part of your system. Ready to work with your system.

By showing off its power, not its size, it keeps your personal computer personal.

## Winchester technology made easy

But for all its power, this is one memory system that doesn't forget you're human. So QuadDisk comes with a virtual memory (RAM Drive) and a print spooler. Plus, QuadDisk's File Utility. To copy, rename, erase, and execute programs straight from a menu.

Without using complex DOS commands.

## Quadram Quality

Every QuadDisk comes stamped with the Quadram Quality seal. The mark of dependability and performance from the leader in microcomputer enhancements. So visit your local computer retailer today. Ask to see QuadDisk in action. When a little space is all you have, QuadDisk by Quadram is all you need.

QuadDisk features removable cartridges which give you unlimited off-line storage. It's Winchester technology made easy.

# Hello, information.

Or, how the IBM Personal Computer can bring you the world.

There's a world of information just waiting for you. But to use it, study it, enjoy it and profit from it, you first have to get at it.

Yet the facts can literally be right at your fingertips — with your own telephone, a modem and the IBM Personal Computer.

---

### **Plug into the network.**

---

The modem that plugs into your phone takes the codes your IBM Personal Computer understands and turns them into signals that can be transmitted over the phone lines.

On the other end of the phone lines are independent information services\* ready for you to access from your home, school, lab or office. So, in minutes, you can tap the resources of over a thousand data bases — and plug into a world of possibilities.

---

### **Something for everyone.**

---

At home, for example, you can shop through an electronic catalog. Access mortgage amortization and tax depreciation schedules. Study the wines of France, the foods of Italy. Find property to sell, rent, swap or share. And play hundreds of games.

At school, you can bring news into the classroom — as it happens. You can teach and learn with facts about everything from

phrase origins to plane geometry. You can also tap instructional courses and learn how to program the very IBM Personal Computer you're using.

In the lab, you can call up a wealth of mathematical and statistical programs or retrieve scientific and technological data.

In the office, you can plug into the commodities market. Read abstracts of leading publications. Even get census figures to see who's in your major market. And when you're planning a business trip, your IBM Personal Computer can provide airline schedules and car rental information, as well as tell you what the weather is and where the best restaurants are.

---

### **Calling all computers.**

---

And these outside data bases aren't your only information link, either.

With assigned passwords, you can also have access to data that's stored in your company's IBM minicomputer or mainframe via your IBM Personal Computer.

You can even exchange a sales forecast with a manager two floors down or two thousand miles away — one IBM Personal Computer to another.

So the IBM Personal Computer really *can* let you call the world. But there's one call to make first. For more information on where to buy the IBM Personal Computer, call 800-447-4700. In Alaska or Hawaii, 800-447-0890.

---

## **The IBM Personal Computer**

---

## **A tool for modern times**

# Undo.Windows.

New Microsoft® Word. It makes your IBM Personal Computer think it's better than a \$10,000 word processor.

With Microsoft Word, what you see on the screen is what you get on the paper. So it's easy to spot mistakes.

**Boldface**, underline, and *italics* look like this, not this: ^Bboldface^B, ^Sunderline^S, ^Iitalics^I.

And, when you make changes, paragraphs are automatically reformatted. Flush right, flush left, centered or justified. It even gives you several columns on a page, like a newspaper.

**Word forgives and doesn't forget.**

There's an "uh-oh" command called Undo. Make a mistake? Or just want to experiment? Hit Undo.

# Mouse. Finally.

Word undoes your last change and remembers things the way they were.

Word does windows. Up to eight, to be exact. So you can transfer or edit between eight different documents. Or between eight different pieces of the same document.

## Word travels fast.

Word has a Mouse, a handy little critter that lets you move copy, select commands and edit faster than you can say "cheese."

Word also lets you create your own style sheets, so you can standardize your documents, memos, files and letters.

It's not surprising that Microsoft has a way with Word. We designed the MS-DOS operating system that tells the IBM® PC how to think. And we pioneered the first microcomputer BASIC, the language spoken by nine out of ten micros worldwide.

For a few final words, call 1-800-426-9400 (in Washington State call 206-828-8088) for a free Word brochure and the name of your nearest Microsoft dealer.

**MICROSOFT**  
The High Performance Software

Here are two beautiful ways to get small computers on line with the mainframe quickly, easily and economically—yours from DCA, home of the industry's first coaxial cable links between small computers and IBM 3270 networks.

IRMA™ is the Decision Support Interface™ that gets IBM Personal Computers and IBM PC XT's into the 3270 mainstream via direct attachment to 3274 or 3276 controllers.

# CHAMELEON

by SEEQUA

## \$1995 Complete

# The IBM® Compatible Computer

### BOTH WORLDS OF PROCESSING

Using a unique dual processor technology, the Chameleon by SEEQUA is both IBM-PC compatible and CP/M-80™ compatible providing the largest software support available.

### TWICE THE MEMORY

128K bytes RAM are standard, internally expandable to 256K. And 320K formatted disk storage is included.

### SOFTWARE INCLUDED

Your computer is delivered with SEEQUA's MS-DOS, compatible with the IBM

standard 16 bit PC-DOS operating system. It includes Perfect Writer for word processing and Perfect Calc for financial analysis. And it has MBasic to let you write your own routines. Chameleon comes standard with 640 x 200 resolution black and white graphics and 320 x 200 resolution color graphics.

### EXPANDABLE

Chameleon has both serial and parallel ports standard. You can add an additional serial port or the IEEE-488 port. You can even use IBM PC compatible add-on boards in our optional expansion interface package.

### FITS IN YOUR ENVIRONMENT

Chameleon is at home in your office. But its compact packaging makes it easy to carry elsewhere.

To learn more about Chameleon's power, call us at 800-638-6066. We'll put you in touch with our closest dealer.

JANUARY 1984

## IBM IS TRUMPS IN BIG LAS VEGAS GAME

When high-rolling Comdex hits tinsel town, there's new meaning for slots and chips—and the Japanese join the fray.

CONNIE WINKLER AND MARTY PORTER

**LAS VEGAS.** Hardware and software manufacturers might as well have been playing at the game tables here at the Winter COMDEX '83 Show. Many old cards were in play, only a few new cards were showing—and the players, for the most part, were old hands.

New cards at COMDEX were dealt by:

- Japanese manufacturers showing 16-bit personal computers that, in one or more ways, aped the IBM PC.
- A surprising number of manufacturers that offered UNIX-based systems, including one which buttons together the MS-DOS and UNIX operating systems.
- Rana Systems, Inc., which put on display an odd box, with two 5½-inch drives and three boards, that allows the Apple II to run MS-DOS programs, for \$1,799.
- Tandy Corp. joined the

*The Comuter, a peculiar-sized, 16-pound, IBM-compatible, introduced by Visual Computer, Inc. at COMDEX.*

PC-compatible fray announcing its TRS-80 Model 2000. The Model 2000 with an Intel 80186 microprocessor costs less than a PC and is thrice as fast, Tandy claimed.

There were many old cards—or slightly updated versions of old cards—which were dealt on the ex-

hibit floor spanning two meandering pavilions and three hotel convention centers. These included:

- IBM's new PCjr home computer. Big Blue took over an entire "Gold Room" of the main hall and set up about 80 PCjr's for by-ticket-only demonstration of DOS 2.1 for both users and soft-

ware designers. IBM also released some of the first technical details on PCjr.

● 1983 was the year of the portable computer, and the year ended with a bang. Portables were everywhere, including a new and peculiar-sized one, the Comuter, from Visual Computer, Inc., of Marlboro, Massachusetts. It's about the size of IBM's hard-disk drive attachment for the IBM PC, runs MS-DOS, weighs about 16 pounds, and costs \$2,450 for a typical configuration.

● And, of course, there were more integrated software applications packages—many, if not all, with windows or windows capability.

Throughout the displays the IBM PC was a ubiquitous machine, with many, many software and peripheral vendors claiming their products ran on the PC.

The Japanese are also warmly embracing the MS-DOS and 16-bit playing card

as evidenced at COMDEX. Matsushita (under the label Panasonic), Fujitsu, and Sanyo had PC look-alikes...and Sharp reported good sales of its new \$1,995 portable lap computer.

In addition, another Japanese company, Mitsubishi, announced it has the OEM assembly contract for Sperry Corporation's entry into the IBM compatible horse race.

Of particular interest was the Matsushita-owned Panasonic Company's portable, the Senior Partner, a MS-DOS 2.0 computer the company claims was rated "highly compatible" by Future Computing, the Richardson, Texas consulting firm. However, it's the Senior Partner's price tag that's really expected to turn heads—the unit is priced at \$2,495 with a single disk drive. Add \$450 to the tab for a second drive and \$320 for a 128K RAM expansion board.

The Senior Partner has a 16-bit 8088 microprocessor with an 8087 co-processor socket.

The philosophy behind Fujitsu's new product in the personal computer marketplace can best be described by this gambling town's term "hedging your bets." Three of the most popular micro operating systems were demonstrated on its Micro 16s Personal Business Computer—MS-DOS, CP/M-80, and CP/M-86—although the standard unit will be sold with CP/M-86 bundled in... for \$4,000.

Sanyo, meanwhile, billed its MBC 550 as 100 percent IBM PC compatible "except with graphics." Again, the price tag is a big selling point with the one disk drive ver-

sion (160K) at \$1,000—right under the nose of the \$1,269 announced for the IBM PCjr. A larger version, with two disk drives, is expected to sell for \$1,400.

Several UNIX multi-tasking systems were on the floor, but one from CYB Systems, Inc., of Austin, Texas, provided file-to-file transfer between UNIX and MS-DOS via its network server CYB/Unite 16i. Running the UNIX System V operating system, which has been pretty much standardized by Bell Laboratories. The \$40,000 16i can be used as the central node in a network of up to 16 IBM PCs, PC/XTs, IBM compatibles, or existing CRTs.

Rana Systems, Chatsworth, Calif., which for two years has made add-on drives for Atari and Apple systems said its latest IBM PC-emulating version will be available at the end of February. The system has been embraced by Apple Computer, as a way Apple users can bridge to the proliferating MS-DOS programs.

According to Rana vice-president, Donald Burtis, the Rana unit has two double-sided, double-density drives stacked on top of each other and three boards: one is for video and emulates the IBM color graphics board, the second has two Intel 8086 microprocessors, and the third is a memory board with 256K (which can be upgraded).

The Rana IBM mimicker also requires a single card to be installed in the Apple II. Rana runs with the latest Apple operating system, proDOS, CP/M-56, or CP/M-60. ■

# MICROSOFT OPENS WINDOWS

BY JAMES LANGDELL

Microsoft announced its plans for Windows, an extension to the MS-DOS operating system that should be available by May 1984. Windows will provide a standardized interface for bit-mapped graphics and mouse control, and the capacity to transfer data from one pro-

make any announcement regarding our relationships with OEMs unless that OEM chooses to make an announcement." Microsoft will have prepared a version of Windows for PC-DOS by April 1983, but details concerning the release time and price of this product depend

Microsoft Windows divides a screen into "tiled" areas for each program that is selected for display.

gram to another if both programs use any of Microsoft's predefined data types.

Microsoft made this announcement in November at a New York press conference. At the conference, Microsoft's speakers were flanked by 23 personal computer manufacturers that plan to offer versions of Microsoft Windows for their systems. IBM, however, was not involved in this public announcement. Microsoft explained that nothing could be said at this time about IBM's support of Windows because "our policy is not to

on IBM. Several other computer manufacturers were said to be planning to bundle Windows and MS-DOS with the hardware they sell.

Microsoft's MS-DOS has become a standard disk-operating system for 16-bit microcomputers, thanks to IBM's decision to offer it with the PC. However, since MS-DOS does not include a set of standardized graphics operations, programmers who want to do graphics run the risk of writing software that can run only on a single computer model.

Microsoft Windows will

provide a hardware-independent set of fundamental graphics commands, so software written with these can be run on any model of computer that uses MS-DOS together with Windows. The minimum requirements are a system with MS-DOS (2.0 or a later version), 192K RAM, two disk drives (hard disk recommended), a bit-mapped display, and a mouse.

Programs available when Windows is running are listed at the bottom of the screen either by name or with an icon (that is, a diskette sleeve for a disk-operating system, a brush for a graphics application, a sheet of paper for a word processor). A program can be selected to appear in a window by using the mouse to move a cursor onto the icon or name. The commands for a program appear at the top of the program's window.

The windows are arranged in a "tiled" pattern in which the windows do not overlap. If the full contents of a program's screen can't fit in a smaller window, a user can use scrolling to display different portions in the window. A "zooming" feature can be used if you choose to have any one program fill the full screen (Microsoft admits that Windows' users would spend most of their time working with programs one at a time).

By the time Windows is released, Microsoft intends to have its *Word* and *Multiplan* programs available in versions that can take advantage of the new capabilities.

For more information on Windows, write to Microsoft Corp., 10700 Northrup Way, Bellevue, WA 98004. ■

## VISI ON COMES INTO SIGHT

BY JAMES LANGDELL

The Visi On "integrated applications environment" is finally available, several months after its expected release in the summer of 1983 and nearly a year after the system was first announced by VisiCorp at last winter's Comdex show. (See "Visi On, A Mouse On The Digital Desktop" in *PC*, Volume 1, Number 9.)

VisiCorp is now selling these products from its Visi On line: the Visi On Applications Manager software (\$495) in versions for personal computers made by six manufacturers (including IBM's PC, XT and 3270PC); the Visi On Mouse (\$250); and three applications programs that run under the Visi On manager: *Visi On Calc* (\$395), *Visi On Graph* (\$250), and *Visi On Word* (\$375). A fourth program, *Visi On Query*, is a relational database manager, which is expected to have a list price of \$375 when it appears in

early 1984. The total price of this software and mouse is \$2,140. VisiCorp recommends that Visi On be used on a system with a hard Winchester disk, at least 384K of memory, and graphics support.

The heart of the Visi On system is its Applications Manager, a level of software that fills a gap between the applications programs and a computer's hardware and operating system. A version of this software must be written to suit a particular combination of hardware and operating system, such as an IBM XT running PC-DOS 2.0. The Applications Manager provides standardized means that applications programs use to provide graphics and operate together. These functions aren't standardized in most operating systems.

One of Visi On's features is its ability to display the operations of several pro-

grams simultaneously on a screen in overlapping windows. A user can select which programs are displayed and determine the size and location of each window.

Most of the Visi On Application Manager functions are performed through a two-button mouse rather than the keyboard. For example, a program can be activated by moving the mouse to position a cursor within the program's window, then pressing the select button on the mouse. A double border appears around that window and the window appears in the forefront of the screen. The contents of this window are not covered by other windows; the effect is as if the selected program were a document pulled out of a pile of papers on a desktop, then placed on top of the stack. The mouse's other button is used for scrolling through the contents of a window.

One big difference in Visi On since it was first announced, is that VisiCorp decided to offer its software environment as an open system. Instead of marketing software that could only be used with other programs written and sold by VisiCorp, the company has published all the standards needed to write programs that are compatible with Visi On. VisiCorp is selling the software tools that were used by its own programmers and will charge no royalty.

IBM has agreed to offer the Visi On product line at IBM Product Centers. For more information on Visi On and the application developer's toolkit, contact VisiCorp, 2895 Zanker Rd., San Jose, CA 95134. ■

# Why buy an IBM XT when you can buy an IBM PC or compatible, our Pegasus XT Conversion Kit, and save yourself almost \$1,600?

For \$1,295 you can buy our internal 10 megabyte hard disk system installed in an IBM PC or compatible of your choice.

Think about it. When you consider buying an IBM XT or XT look-alike, you're after large storage, the convenience of IBM compatible software, and the peace of mind associated with a quality product. But one thing you're not looking for is paying more than you have to.

## The Savings

If you buy an IBM XT, it's going to cost you \$4,995 for the XT system unit. You'll get 10 megabytes of hard disk storage, one 320 Kbytes floppy disk drive, 8 slots, a \$120 asynchronous communication adaptor, 128K of RAM and the three IBM initials.

We recommend instead, that you buy the IBM PC for \$2,104. You'll get one 320 Kbyte floppy disk drive, 5 slots, 64K of RAM, the same three IBM initials, a space for your dealer to put the Pegasus XT Conversion Kit, and an extra \$2,891 to buy it with. But since the Pegasus XT Conversion Kit costs only \$1,295 installed, you'll have an extra \$1,596 — almost \$1,600 — left over. With many compatibles you'll have even more.

But if you already own an IBM PC and were thinking you'd just get the

XT expansion chassis, we have a surprise for you. If you add the \$1,295 cost of the Pegasus XT Conversion Kit to the \$2,104 price of an IBM PC, you can have a second computer — instead of a dumb box — for less than the price of the XT expansion chassis.

## Hard Disk Quality

Now, before you start thinking that IBM's hard disk is better than ours, remember that IBM doesn't make their own hard disk for the IBM XT. They go into the marketplace, just like we do, and strike the best price they can. If you were to buy an IBM XT, your hard disk might come from one

of four manufacturers. It's possible, in fact, that the IBM XT might have the same hard disk that you'd get in our Pegasus XT Conversion Kit.

## The Role of the Controller

But the hard disk is not the whole story. It takes a controller card to get your files from the hard disk to your computer so you can use them.

The IBM XT has a good controller card. Unfortunately, it is not designed to take advantage of some of the ad-

vances in hard disk technology. Our controller card will work with our 10 megabyte hard disk all the way up to our 140 megabyte hard disk — and everything in between. With the IBM XT controller, you're limited to four manufacturers. The Pegasus controller board, on the other hand, configures to whatever hard disk you may want to install in the future. There is virtually no limit on hard disk size or number of manufacturers you can use.

## Larger Disks

Pegasus offers an entire line of hard disks. You can expand your IBM PC far beyond the storage of the IBM XT. You can add our 23 megabyte hard disk for only \$1,995, or our 40 megabyte for only \$500 more. And if you really need storage, we offer a 65 and 140 megabyte hard disk that slides right into the same space that IBM and the compatible manufacturers put their 10 megabytes.

So, before you decide to spend more money than you have to, consider the Pegasus XT Conversion Kit. You'll get dealer support, the same 90 day warranty IBM gives, and have enough money left over to buy one of our larger hard disks. And isn't larger storage why you were looking at the hard disk in the first place? Contact your computer dealer today.

## DEALER INQUIRIES INVITED

**INFOWORLD:** "Mass Mailer can help eliminate the source of frustration (in maintaining mailing lists)... Mass Mailer is an affordable alternative for sorting, splitting and merging nearly any type of data... Designed to handle large-volume mailing lists... sorting easily meets U.S. Postal Service bulk mail requirements... You should consider its application to your personal records and to the retrieval of nearly any type of data. You can rename labels and categories of information codes. As a result, lists of parts, inventory of collectibles, books loaned to friends and other types of data lists can work on the Mass Mailer system. Alternative Software's published claims for this product are realistic, and you can expect the program to execute all routines as expected. The Mass Mailer print routine has been designed with the consumer in mind. You can select to print all or part of a file, determine the exact number of copies for each record and specify the format. With additional commands, you can customize the envelopes, labels, or mailing lists to meet your application needs. In all tests of this procedure, the print routine performed efficiently and flawlessly. Mass Mailer is well protected from spurious errors you might make while using the program. As a result, it is impossible to contribute to system failure... The information in the manual is presented in an interesting, easy-to-read style." October 10, 1983

# PC-COMPATIBLE PORTABLES

Portables are being upgraded with greater memory and durability as the competition among computer manufacturers heats up.

BY KAREN COOK AND JAMES LANGDELL

Several manufacturers of IBM compatible computers looking for new market niches are pinning their hopes on the same discovery: you can dress your PC or XT up, but you can't take it out. No matter how you look at your IBM, it's not portable.

At least three PC-Compatible portable computers have recently gone on sale, and more will follow. The first company to reach retail stores was Compaq, which introduced its Compaq Plus last October. Eagle Computer and Wilmington, Massachusetts-based Ivy Microcomputers started shipping new models shortly thereafter. Televideo Systems, Inc. and Seequa Computer Corporation, also makers of IBM-compatible machines, plan introductions soon.

President Rod Canion from Houston-based Compaq Computer Corporation quite literally unveiled the Compaq Plus: The first display model was draped with black fabric that Canion whisked off to reveal the new computer.

Looking proud, Canion declared that the Compaq Plus is the first non-IBM system to be fully compatible with DOS 2.0. If so, the company should maintain the reputation for com-

patibility it built with its highly regarded floppy disk portable.

The first few hundred new Compaq Plus units were already at dealers when Compaq made its announcement. Perhaps the slick presentation and smooth delivery was to reassure potential investors: that day Compaq had filed with the Securities and Exchange Commission (SEC) for its first public stock offering of six million shares. (At any rate, the concurrent-with-delivery announcement was a welcome

change from the common industry practice of hinting at or advertising new products months before they are really available.)

The 31-pound Compaq Plus contains a 5¼-inch 320K diskette drive and a 3½-inch 10-megabyte hard disk. While Winchester drives have a history of fragility that seemingly makes them impractical for use in a transportable system, Compaq claims it solved this problem. Sturdiness was emphasized in its design so that the hard disk can with-

stand the abuse that a transportable computer must face.

The Compaq Winchester's smaller size made it possible to build in more protection around it. The disk is mounted into a rugged metal casing about the size of a 5¼-inch drive. Rubber bumpers protect the drive at top and bottom, and there's about an inch of clearance on either side of the drive. Compaq claims it ran destructive tests in which the hard disk and its data remained intact, even though the rest of the system was ruined. (Following the announcement, one Compaq staffer revealed that Canion had planned to demonstrate the machine's durability by "accidentally" knocking it off its stand so that it would crash—harmlessly—to the floor. Canion practiced this several times, and the computer survived, but the routine was ruled too awkward

# TIC TOC WE'VE GOT THE CLOCK

Enhance the performance of your IBM® PC or XT with RAM +3, a new multifunction board from Seattle Computer. It combines the most needed functions for your PC on a single card. This leaves the PC's other expansion slots open for your future needs. Here's what you get:

**Lithium Powered Clock** The RAM +3 clock/calendar eliminates the need to manually input the date and time each time you power up. And the inexpensive lithium battery ensures that the clock keeps accurate time even when the power is off.

**RS-232 Serial Port** It's an easy way to connect letter quality printers, modems and other peripherals to your IBM. It's compatible with IBM's Asynchronous Communications Adapter and can be selected as either COM1 or COM2. No translation software is required.

**Parallel Printer Port** Designed to operate most parallel printers, it is functionally identical to and completely compatible with the IBM Printer Adapter.

**Memory Options** To increase the memory capacity of your IBM, there are five RAM +3 memory options: 0k, 64k, 128k, 192k, and 256k. The memory expansion boards are socketed and expandable in 64k increments to 256k. For users who do not need to increase the memory of their PC but want the clock and added port capabilities, a no memory, unsocketed RAM +3 is also available.

**FLASH DISK™** and **FLASH PRINT™** To dramatically improve your PC's throughput, FLASH DISK lets you designate as much as 576k of RAM as a disk drive. And with FLASH PRINT, you can compute and print simultaneously. FLASH PRINT is a user definable buffer that lets you select, in 1k increments, as much as 63k of memory as a buffer. Your printer can run at its maximum speed while you continue to compute.

**RAM +3 is Available and Affordable** Seattle Computer RAM +3 boards are available through a nationwide network of retail outlets including ComputerLand stores. For the location of the outlet nearest you call toll free:

**1-800-426-8936.**

**RAM +3 prices start at \$210.00\***

\* (Unsocketed, no memory version;

COMPUTER**

Seattle Computer Products, Inc.,  
1114 Industry Drive, Seattle, WA 98188

for the press conference.)

Compaq's 3½-inch hard disk is formatted the same way as the 5¼-inch Winchesters used in IBM's XT. As a result, there isn't the loss of software compatibility that would be involved if a 5¼-inch diskette drive were replaced with a smaller model. These hard disks are manufactured by Rodime, of Scotland. Compaq is negotiating to have additional suppliers for its drives.

"To us, compatibility means to be able to run all PC and XT software off the shelf," Canion explained at the announcement. "Canion believes that the Compaq Plus is the first system to be XT-compatible. The IBM XT has a personality of its own, Canion says, so it was a challenge to create a system that reproduced its effects without copying the machine exactly. Compaq's engineers even imitated some bugs in IBM's system so that XT software could find the same routes around problems on the Compaq Plus.

Like the original portable Compaq (see "Compaq: Have Computer Will Travel" in *PC*, Volume 2 Number 1), the Compaq Plus has a 9-inch diagonal, built-in monochrome monitor. The Compaq's monitor and graphics board allow it to use programs designed for both of IBM's display formats—character or color/graphics.

Compaq dealers are providing a \$2,500 Fixed Disk Upgrade Option for the original portable Compaq, which is priced at \$2,995 with a single 360K diskette drive. An upgraded Compaq is said to be identical to the new Compaq Plus, with no

The Ivy 3002: the main selling point is the Intel 80186 microprocessor.

Eagle's Spirit XL: a hard disk as tough as a floppy drive, the company says.

additional weight, so there's only a \$500 price penalty for purchasing a standard Compaq before adding the hard disk. (Converting an IBM PC to function as an XT requires the addition of an expansion unit that is the same size as the system unit itself.)

Asked how much Compaq is dependent on IBM having not produced a transportable computer of its own, Canion countered that Compaq is a quality machine competitive with IBM's. "Each has something to offer: IBM has its name and Compaq has its

advantages."

Many customers who originally wanted an IBM PC bought a compatible machine instead because no IBM machines were in stock at the time. Did the shortage of IBM PCs and XTs this past year help provide Compaq with its initial success? Canion replied; "There's been a shortage of Compaqs too. I don't know if that's helped IBM or not."

\* \* \*

Eagle Computer is another rising compatible manufacturer benefiting from IBM's shortfalls. Eagle beat

Compaq to the stock market by going public last summer, but it trailed marginally in getting its new hard disk portable, the Spirit XL, into stores.

Eagle uses a standard 5¼-inch hard disk instead of a version of Compaq's 3½-inch model, but Vice President of Marketing William Roland insists Eagle's disk is just as durable. "It has a rating of 40-gravities, the same as a floppy disk, while Compaq's is only rated for 30-gravities." According to Roland, a 40-gravity rating means the disk can sustain a drop of three or four inches without damage.

At 32.5 pounds, the Spirit XL weighs a pound and a half more than Compaq Plus, but it costs about \$20 less. Like the Compaq, the Eagle has 128K of RAM that can be expanded to 640K, a 9-inch screen, and built-in graphics capabilities. It comes with GWBASIC and CP/M-86. The Eagle has room for four expansion slots instead of Compaq's two. Also, Eagle's two serial ports are standard.

Another hard disk PC-compatible portable now available is the Ivy 3002, a companion to the Ivy floppy disk portable. The Ivy, which costs almost \$1,000 less, is a stripped-down, 22-lb. version of Eagle and Compaq. Disks are formatted to 320K, and the 256K RAM can be expanded to 512K. The Ivy runs MS-DOS 2.0, but doesn't supply BASIC. There are no expansion slots.

Like the other manufacturers, Ivy promises durability. Company publicity quotes a mean time before failure of 10,000 hours. Ac-

# No Head is Better than One!

## Bubble Storage for the PC and PC XT.

Bubble memory combines the best features of disk and solid state memory with extreme reliability. Unlike a floppy disk, it's entirely solid state with no moving parts. This makes it impervious to dust, dirt, fumes, and vibration. And, unlike normal memory, it doesn't lose data when the power goes off.

Now you can enjoy all the advantages of bubble memory combined with the famous Pure Data quality and reliability for your IBM PC or XT.

- PDIB-128 provides 128 KBytes in one slot
- PDIB-384 provides 384 KBytes in one slot
- Not affected by power failure
- Faster than a floppy disk
- Extremely reliable
- Standard DOS 2.0 disk-type device
- Compatible with all DOS software
- No patching of any system files
- Password option for computer and/or bubble
- Password cannot be bypassed by software
- Comprehensive diagnostics and other utilities
- Fully illustrated installation and operation manual
- Technical support hot-line
- Guaranteed 48 hour service
- Bubble uses 2 I/O addresses and no memory space
- Interrupts are supported but not required
- DMA is supported but not required
- On-board EPROM socket
- Pure Data quality and reliability
- No moving parts

# GLOBAL THERMONUCLEAR WAR!™

A fast-action, high-strategy game with full color graphics, exciting animation, and realistic sound effects. Features include HAL™ speech synthesis (without special hardware), option to play as enemy or defender, and top ten score display.

Action begins with you at the controls of the Defense Command Computer. A random error causes the computer to secure your nation's defense for full scale nuclear attack. You have 30 seconds before the first ICBM is launched at your enemy's capital. Decipher the secret code for aborting missile launch or prepare to fight World War III.

At launch, you discover the computer has deleted all targeting data for your weapons. Presented with NORAD style strategic displays, you watch the

trajectory of the missile track across the globe as you frantically retarget your weapon systems and prepare for your enemy's attack. Do you strike before or after the enemy launches its first wave? Do you target for military, industrial, or civilian targets? Perhaps some combination? You watch enemy strikes against your homeland and the casualties grow to staggering proportions as you attempt to deter or conquer the enemy before you are completely destroyed. The war has begun and your nation's destiny, even the destiny of the world, is in your hands.

Ask for *Global Thermonuclear War™*: \$34.95 at your local dealer or order direct. Visa, MasterCard, Money Orders, Checks accepted (Calif. residents please add 6 3/4% sales tax), foreign orders add 15%, U.S. currency only. Dealer inquiries invited.

*Global Thermonuclear War™* is available for your IBM PC or XT (64K, disk drive), Apple II+ or IIe (48K, disk drive, DOS 3.3), Commodore 64 (cassette or disk drive), Atari 400 and 800 (48K, disk drive). Joystick play optional in each version. TRS-80 version to be released soon.

WISCONSIN (UPI) — THE U.S. AIR FORCE HAS DEVELOPED an experimental spacecraft given the title XTM. Due to the vague description as to the design or purpose of the XTM, the press is still in the dark about many aspects of the craft or its intended mission. It has been discovered, however, that at least three pilots have been lost in the current flight testing program of the mysterious

# TIME MACHINE I

Starfire Games offers you the ultimate challenge in adventure games: Time Machine I. First in a series of time travel episodes, Time Machine I catapults you into mind bending mystery where the extraordinary is commonplace and dangers are as real as any human experience.

You are the fourth test pilot to fly the joint Air Force/NASA XTM series experimental "craft", a vehicle which transverses through time, the true lost frontier. Provided with the newly modified but still untested version of the craft, XTM-3, your mission is to rescue the three previous test pilots who are lost somewhere in the infinity of time itself.

Not far into the mission, you discover this task is more than you could have imagined. Never knowing what you will encounter next, you maneuver your ship from one

adventure to another. You draw upon every resource to survive events ranging from battles with Vikings in the past to outwitting aliens in the future for your ship, the lost pilots, even your very life. But prepare, your final challenge is to return to your own time era safely, a feat which has not been accomplished by any pilot before you.

Time Machine I is available for your IBM PC or XT (64K, disk drive), Apple II+ or IIe (48K, disk drive), Commodore 64 (cassette or disk drive), Atari 400 and 800 (48K, disk drive), TRS-80 version to be released soon.

Ask for Time Machine: \$34.95 at your local dealer or order direct. Visa, Mastercard, Money Orders. Checks accepted (Calif. residents please add 6% sales tax). Dealer inquires invited.

# INTEGRATED 6

has as many modules  
*twice* as Lotus 1-2-3.

Integrated 6 is the most comprehensive business productivity tool for the IBM PC. Its interactive modules combine all the functions you need for complete information processing and presentation. You get the capabilities of Lotus 1-2-3 and much more. So, you can accomplish more tasks, be better organized, generate accurate financial information faster and easier, with your IBM PC.

## SIX TOTALLY INTEGRATED MODULES.

Until now your productivity has been restricted by the limitations of available programs. Integrated 6 removes those limits because it incorporates the Spreadsheet, Database, Business Graphics, Word Processing, Communications Program, and Terminal Emulator in one totally integrated program that lets you:

*rapidly create your spreadsheet and graph the data instantly. When you change the numbers, the graphs change. Over 20 types of charts including 3 dimensional pies, bars, lines and pie-bar combinations are immediately ready for printing and plotting for presentation.*

*insert charts, graphs and spreadsheet data into the word processing for comprehensive reports.*

*create an almost unlimited database, relational for extra productivity. And access other computers and programs for file transfer, updating and storage.*

*with Integrated 6 you can use your PC as a terminal. Why buy one? Communicate directly with another PC or main computer. And there is much, much more.*

## YOU NEEDN'T BE AN EXPERT.

Integrated 6 was designed for business owners, executives, professionals - busy people with no time for computer classes. So it's very easy to use. Even if you have never used a computer before, you will be amazed at how quickly you are up and running. Menu driven, with commands in plain English, it lets you get on with the job fast, guiding you with extensive built-in help. Ask your computer dealer for a demonstration.

Integrated 6. It's like having a personal assistant. For a lot less money.

1972 Massachusetts Ave. Cambridge, MA 02140 (617) 481-8434

# FRUSTRATED WITH INCOME TAX?

## SERIOUSLY, WHAT'S YOUR QUESTION?

- Will alternative minimum tax hit me?
- Will tax shelters help?
- What's the extra tax if I sell my stock?
- Will Income averaging work for me?
- How much will an IRA save me?
- Will I owe or get a refund?
- Is it worth it for the spouse to work?
- What's the tax savings if I buy a new home?
- Will it help to prepay deductible items?
- Is my withholding too much? Too little?
- What's the tax if I cash out of my company savings plan?

### WHATEVER YOUR QUESTION, TAX ANSWER HAS YOUR ANSWER!

# tax answer

- Complete tax calculations for 1983
- 1984 rules and rates for planning ahead
- Does it all for you except save receipts and fill in the forms
- Easy to use, interactive, takes you to the bottom line anytime.

# SIMPLIFIED SPREADSHEET ASSEMBLY

**R**ISING SPREADSHEET (A) KNOCKS MEXICAN JUMPING BEANS (B) INTO MOUTH OF NEBROTIC MAN (C) WHO IS SO DISCOMBOLATED THAT HIS HAIR STANDS ON END DISLORGING HAT (D) WHICH OPENS CAGE (E) AND RELEASES EPICUREAN MOUSE (F).

MOUSE, INSPIRED BY SCENT OF PERFECTLY AGED CAMDEBLAT CHEESE, GRABS THROUGH SPREADSHEET ONLY TO DISCOVER HE HAS BEEN FOOLED BY AROMA OF OVER-LIVE GORGONZOLA (G).

IN A FIT OF PIQUE HE SPILLS VINTAGE WINE (H) INTO WATER-WHEEL (I) WHICH TURNS PULLEY THAT CAUSES GLOVE (J) TO GRASP SPREADSHEET AND MOVE IT TO TAPING AREA.

SHEET IS TAPED SECURELY IN PLACE BY TRAINED ADHESIVE TAPE WORKMAN (K).

## MADE SIMPLE.

Now you can save time, aggravation, adhesive tape, and Gorgonzola cheese by following one simple direction—Sideways. It's the unique software program that lets you output all the spreadsheet columns you need, all on one continuous page, all with one print command—and all for only \$60!

With Sideways on your side, no spreadsheet you invent with Lotus 1-2-3™, VisiCalc®, Multiplan™ or SuperCalc™ is too wide! And it's just as powerful an ally when you're creating far-into-the-future schedules and PERT charts with your word processor. In fact, for any wide text file, for dozens of uses, the way to go is Sideways.

The experts agree. PC Magazine, for example, writes: "If you've got the need, Sideways has the solution." And PC World calls Sideways "nifty . . . an easy to use program that does what it claims."

You can go Sideways today with an IBM® PC and an IBM®, Epson, Okidata, Prism™ or Pro-writer™ printer. Ask for Sideways at your local ComputerLand® or other leading computer stores. Or mail a \$60 check to Funk Software, P.O. Box 1290, Cambridge, MA 02238. (617) 497-6339. MC/VISA accepted. Send no Mexican jumping beans, please.

## SIDEWAYS™

FOR EASY-READING HARD COPY

CIRCLE 306 ON READER SERVICE CARD

cording to the company spokesperson, Catherine Aronson, that figure was calculated by scientists at Harvard University. The pre-failure period works out to about 14 months—longer than any of the Ivy 3002s have been in existence.

Unlike the other machines, the Ivy 3002 uses an Intel 80186 chip. As a result, Aronson says, programs like Lotus 1-2-3 will run up to four times faster on the Ivy than on the PC.

Among the PC-compatible models to come: Televideo Systems of Sunnyvale, California plans a fixed-disk companion to the floppy disk portable announced at COMDEX in Las Vegas. The machine will have 128K of RAM, expandable to 256K, and run DOS 2.0 and BASIC. Televideo will use the 8088 microprocessor, and build in an empty slot for an 8087 coprocessor. The company hasn't packaged its hard disk yet, but Director of Marketing Gary Baughn says Compaq's 3½-inch disk housing "is an extremely good idea. That's the way we intend to go."

There is one cautionary note, and it comes from Seequa, the Odenton, Mary-

land-based company whose only product has been Chameleon, a floppy disk portable. Seequa premiered a computer with a detachable hard disk at COMDEX, but it is not a portable.

"We don't feel that you can get a hard disk failure rate down to an acceptable level. Basically, people are rushing the technology because they think it's a cute marketing concept," Marketing Director Jim Hoffman explains. Hoffman concedes that the 3½-inch model has possibilities, however, and guesses that Seequa may find suitable technology in six months or so.

As all these companies know, it's often a dangerous game for companies to stake their fortunes on filling a gap that IBM has left in the marketplace. There's a long history of manufacturers who vanished as soon as IBM moved into their price and performance niches. In the highly competitive world of PC-compatibles, getting Winchester disks ready to join the school of hard knocks is only half the battle. For Compaq, Eagle, Televideo, Ivy, and Seequa, the real war—in marketing—has yet to be won. ■

The Compaq Plus is built for durability. Its 3½-inch hard disk is fixed inside a metal casing, with cushioning rubber bumpers at top and bottom.

## CARING FOR YOUR COMPUTER WITH A COMPUGIFT

No desktop computer need ever be lonely again.

Caring computer owners can surround their PCs with CompuCaddy, for pencils, CompuPlanter, or CompuBank. The sturdy plastic terminals are truly micro-sized—about 4" x 6" x 4". They feature a carefully modeled plastic keyboard inlay and a sliding, clear-screened "monitor" that will hold a family photograph. All CompuProducts are beige—the manufacturer found that PC-incompatible colors like pink and yellow did not sell well.

The mini-terminals are \$9.99 plus a \$2 shipping charge from CompuGift, Inc., 27802 Perales St., Mission Viejo, CA 92692. (714) 768-8223.

## THIRTEEN GOING ...PROFESSIONAL

Microsoft's youngest beta tester found his job by finding a bug.

BY ELIZABETH BIBB

Thirteen-year-old Bob Freeman had his first contact with the Microsoft Corporation as a disgruntled consumer, not as a job applicant.

But after he called the company to complain about some bugs he had found in their *Flight Simulator* he was running on his IBM PC, he landed a job as a part-time beta tester for the Bellevue, Washington software developer.

The Microsoft receptionist who took his call mistook his voice for that of the son of product support specialist Delores Bergstrom, who's in charge of handling inquiries about the simulator, and put the call through.

Bergstrom said she answered the telephone with a "hello, little one," assuming it was her 11-year-old, but in-

stead encountered an extremely flustered young computer enthusiast.

When both recovered from their embarrassment at the identity mix-up, Bob told Bergstrom that he had found some problems with the game and thought Microsoft should know about them.

Bergstrom told him that the company was aware of them and that a revised version of the simulator was about to be released. But she was so impressed by the teenager's eagerness that she asked him to test the new product.

Bergstrom spoke to Bob's parents and asked them to co-sign an agreement that Bob wouldn't divulge any information about the new product being tested. Bob's career was launched. (continued)

# WE TURN YOUR IBM P.C. INTO A SMART TERMINAL.

You don't really need to get your hands dirty to turn your IBM PC into a **DEC VT100** and **VT52** compatible intelligent workstation. All you need is **VTERM**, Coefficient's terminal emulation software. **VTERM** features full **VT100** keyboard and video emulation, including 132 column mode, throughput

to 9600 baud, printer support, and error-correcting PC-Host binary and ASCII file exchange. All in addition to the standard capabilities of an asynchronous communications package. Call or write today. Our software mechanics are standing by.

Also available for the **TI Professional**, **Eagle PC** and **Eagle 1600**

Some people  
have dreams  
while others  
have visions.

## MULTIMATE: THE WORD PROCESSOR YOU'VE BEEN DREAMING OF

At SoftWord, we had a vision of what word processing on a personal computer ought to be.

We were challenged by a blue chip insurance company to create word processing for the IBM® PC that would mimic the features and functions of a dedicated system. Other software manufacturers thought we were dreaming.

We envisioned a word processing system that would make full use of the PC and its keyboard. With

Multimate®, you get over 80 powerful word processing functions. Merge, a library for ballerplate, automatic underlining on the screen, on-line help, everything dedicated word processing could give you and more.

In our wildest dreams, we never imagined we would write the documentation reviewers say is the best in the industry. Or offer free enhancements for 180 days, including a spell checker/corrector with an 89,000 word dictionary.

Or that we would be called the "industry heavyweight."

By adding quality technical support, toll-free to end users and offering a 30-day money back guarantee, we took the nightmare out of word processing. In case you think it's still a dream, try Multimate at a computer store near you.

SOFTWORD SYSTEMS, INC. (203) 522-2116 52 Oakland Ave. North, East Hartford, CT 06108

IBM is a registered trademark of International Business Machines Corp. Multimate is a trademark of SoftWord Systems, Inc.

CIRCLE 477 ON READER SERVICE CARD

He has since tested other games and some hardware for the company, which is only about ten minutes from his house in Bellevue.

Using his connections with Microsoft as what Bergstrom calls "a foot in the door," Bob approached other local software and hardware outlets about doing beta testing. His enterprise landed him jobs with InfoCom and Sears Business Systems Centers.

Barbara Brubaker, a spokeswoman for Microsoft, said that while it's not unusual to find young people in the computer business—"The average age here is between 21 and 23 years"—Bob is the youngest employee of the company that she's aware of.

"He's not your typical 13-year-old," Bergstrom said. "He's very professional."

Although Bob isn't paid for beta testing, in accordance with Microsoft's policy, he does receive the games he tests once they're available commercially, and

he is eligible to purchase any hardware at wholesale prices.

"Right now that's worth more to me than money," he said.

Bob's introduction to computers came just two years ago, on a TRS-80, when he was in the sixth grade at Chinook Junior High School in Bellevue. He said "everybody was trying to figure out how to tell everybody how to work the machine." He grabbed a manual and taught himself.

Within a year his parents had bought an IBM PC for their businesses. His father is an ophthalmologist and his mother is an accountant. Bob struck a deal with the elder Freemans for time on the computer in return for teaching his parents how to use it.

Bob drives a hard bargain, and is always on the lookout for ways to cash in on his computer expertise. He's already bagged a Boy Scout merit badge for computers. "That was easy. All I had to

know was what a byte and a bit was."

His beta testing work is only done on weekends or during the summer, so as not to interfere with his homework. He said he uses the PC for school reports, especially in humanities class, in which his teacher "is very logical" he said, and into computers."

Bob also leads seminars on games for the Sears computer stores, critiquing them from a kid's point of view, and he's now writing a column in the Sears newsletter.

Bergstrom said that not even her own 11-year old is as excited by computers as Bob. "My son's into games. So it's nice to see a kid going beyond that," she said.

"We'll just have to see if he has that extra bit of talent, as well as the eagerness to go on," Bergstrom said.

Although he's not sure at this point in his career if he wants to make computers a lifelong pursuit—he's also considering Harvard Medical School—Bob has gone way beyond game-playing.

He's written a program incorporating saxophone music (he's in the school band) with one for reverse circles.

He is currently working on a game program he hopes to market, but he's stuck on the "PEEKs and the POKEs," he said.

"I can't get the computer to remember when the X's have been hit by the O's," he said.

Despite his frustrations with his first foray into product development, Bob's enthusiasm hasn't flagged.

Bob still says, "I like computers. They don't say anything bad to you. They just say, 'okay.'" ■

## SOFTWARE, DISKS, AND LITTLE BROWN JUGS

IBM started a mail and phone order operation called IBM Direct, which provides its catalog on a diskette that describes over 160 products, many of which are not available at IBM Product Centers. Screens of product lists and descriptions appear in monochrome or color.

There's a 5 percent discount for prepaid orders over \$50 and a 10 percent discount for prepaid orders over \$100.

A listing of "Quad Density Diskettes" may be a sign of things to come from IBM. These are used in drives that can handle 96 tracks per inch, which haven't yet been offered by IBM for its personal computers.

On a color display, the multihued text is clear and attractive, but the musical rendition of "Little Brown Jug" at the beginning of the catalog is an inexplicably unprofessional touch.

To obtain an order form for the IBM Direct catalog diskette, write to IBM, P.O. Box 3148, Wallingford, CT 06494, or call (800) 631-5582.

## THE BAD OLD GOOD OLD DAYS ARE HERE AGAIN

Until PCs came along to make the computer business so very user friendly, we came to expect that most product announcements would be packed with blocks of text as congested as the following sample, brought to our attention by Shawn S. Patrick of Springfield, Illinois. It describes one of the highlights of a piece of software:

"All dyadic-defined functions are ambivalent, allowing them to be used monadically without generating a syntax error. The system function `□NC` can be applied to the left argument within a function to determine, at execution time, whether the function actually has been called as a dyadic or monadic."

So, what's this—an account of the inner workings of IBM's advanced 308X series of processors?

No, it's from a recent IBM "Programming Announcement" of "APL for the IBM Personal Computer."

The grand tradition continues.

## Best's Professional Finance Program— Financial Aspirin for Tax Time Headaches.

It's hard to find the time to keep track of personal or small business finances, or to get the training needed to produce sophisticated financial reports. The result is often a makeshift accounting system that can cause a lot of headaches every April 15. But now Best Program's Professional Finance Program (PFP II) makes it easy for you to have all of the complex accounting tools you need right at your fingertips.

PFP II is a powerful record-keeping system that helps you organize 26 asset accounts like checkbooks, IRA's and money markets, as well as 26 liability accounts like credit cards, loans, and mortgages. The system also sets up over 1,000 income and expense categories, 99 sort categories for taxes and expenses, an electronic address book, and automatic check printing and reconciliation. In short, PFP II keeps track of all of your key financial records.

However, the Professional Finance Program is more than just a record-keeping system. From your input it provides eight basic types of financial reports. You can modify these to produce dozens of custom-tailored reports on things like income and expense summaries, budgets, and net worth. PFP II also tracks all asset and liability account activities and provides bar graphs for cash flow, income, and expense reports. Best's Professional Finance Program makes accounting a lot easier, allowing you time to *man-*

*age* your finances instead of *organizing* them.

And don't worry if you don't have any computer or accounting skills. The user's manual includes a tutorial that guides you through the use of the program in six easy lessons.

PFP II runs on the IBM Personal Computer (and the model XT) with a minimum of 128KB memory, and two diskette drives, one of which must be double sided.

PFP II is fully integrated with PC/TaxCut™, a tax planning and preparation program. Simply take the information provided by Best's Professional Finance Program and feed it into PC/TaxCut for an automatic printout of various tax forms. PC/TaxCut and PFP II provide you with a complete tax and financial package that can save you the worry often associated with financial and tax management.

You can order your PFP II for \$245 and PC/TaxCut for \$255 by using Visa, Master Charge or American Express. To order call toll-free, 1-800-368-2405. In Virginia call 703-931-1300. Or write to Best Programs, 5134 Leesburg Pike, Alexandria, VA 22302.

*"The Quality Software Company"*

# Brilliant!

**H**ere's another brilliant idea from the makers of the popular MicroAngelo® graphics board — the SCION PC 640.

Whether you're a systems developer or an end-user, this solidly-designed color graphics board is your best choice for high-resolution color graphics on the IBM PC, as well as many PC-compatibles.

## Here's why:

- 640 × 480 × 16 out of 4096 colors
- Memory-mapped for very high speed operation
- Over 60 2-D drawing primitives, accessible from Basic, Fortran, C, Pascal or Assembler
- High-level software packages available for painting,

business graphics, CAD and slide production

For more information on why the PC 640 may be a brilliant idea for you, please contact Jim Mather at (703) 476-6100, TWX: 710-833-0684, or write: SCION Corporation, 12310 Pinecrest Road, Reston, Virginia 22091.

The PC640 Professional Color™ board delivers superior resolution at 640 × 480, and the simultaneous use of 16 out of 4096 colors.

For more information on why the PC 640 may be a brilliant idea for you, please contact Jim Mather at (703) 476-6100, TWX: 710-833-0684, or write: SCION Corporation, 12310 Pinecrest Road, Reston, Virginia 22091.

# SCION

# DUNSPLUS PUTS XT IN FRIENDLIER PACKAGE

Customers are now offered one-stop shopping for information services.

BY JAMES LANGDELL

Dun & Bradstreet hopes that corporations will give a high rating to its new DunsPlus service, which is built around the IBM XT. As a value-added dealer of IBM's products, the financial services firm offers a system that combines hardware, software, and services, which is ready to use with ease for many applications. The price of a single, all-in-one DunsPlus system is \$10,200; quantity discounts will parallel IBM's discount schedule for the XT.

The hardware component of DunsPlus is primarily an IBM XT with additional RAM (a total of 256K) and a built-in 300/1200 baud modem on a card provided by IBM. (This modem is not yet available other than as part of the DunsPlus system.) An IBM color monitor and an IBM (Epson) dot-matrix printer come with the system.

On the XT's hard disk, 2.5 megabytes of software are provided, which includes the Lotus 1-2-3 spreadsheet/graphics program, the *Multi-Mate* word processor, and communications software. All the DunsPlus software is protected by a software lock that prevents the programs

from being modified or copied, the Wilton, Conn. based company said recently.

The system runs on PC-DOS 2.0, but DunsPlus provides menus that are easy to understand without prior knowledge of the operating system's commands. Messages in the upper right corner of the screen, such as MENU, FORM, and WAIT, prompt the user on what to do at any stage. The menu selections can be made through any method a user might think of—the spacebar, cursor keys, and tab key all work as might be expected. The initial letter of a menu selection can also be entered to move the cursor onto that selection, so, once a user is familiar with the system, he can use these initial letters as commands to move quickly through the menus. DunsPlus' method seems a good compromise that combines the clarity of menu operation with the speed of command operation.

Extensive customer service is part of the DunsPlus package. An IBM service representative will come to the user's office to install the system and for subsequent repairs. Each user is

provided with 2 days of hands-on training in a course developed by National Training Systems. Later, questions can be answered by calling DunsPlus' customer service center. DunsPlus will handle software support directly, including servicing software created by other manufacturers, such as 1-2-3, that is packaged with DunsPlus. To make it easier to answer questions about software over the telephone, messages appear on the lower right corner of the screen that will enable a service representative to know exactly where the user is in a program. This total service support is provided for a year after purchasing a DunsPlus system and can be contracted on an annual basis.

By offering support for all parts of the system, DunsPlus claims to neutralize the fingerprinting that hardware and software vendors sometimes resort to when service

is needed. ("It's a hardware problem," says the software vendor. "No, it's a software problem," says the hardware vendor.)

DunsPlus assembled its system by going to outside sources for hardware, software, and services, each of which has proven successful in the marketplace. But Dun & Bradstreet didn't just put together a "personal computing's greatest hits" package. The company contributed a great deal through the integration of elements in the system. Data can be transferred easily from one DunsPlus application to another. After receiving material through a communications network, a portion of the text can be transferred to the word processor for editing. This data can then be included in a memo, which is then ready to be transmitted as electronic mail, with no further formatting.

The system can be set up to access any teleinforma-

## WHAT A DIFFERENCE A MILLIONTH CAN MAKE

We've already noticed that the floating-point arithmetic used by the PC's BASIC gives some peculiar results. Jack Kelly of Glendale, Missouri pointed out yet another oddity.

When Kelly used the INT command to round off calculations to the nearest whole integer, he got the correct result of 18 in response to:

```
PRINT INT (18.2-0.2)
```

However, when he used this mathematically equivalent command, which included another operation,

```
PRINT INT(2.6*7-0.2)
```

the IBM's BASIC came up with 17—an incorrect result.

We tried this and got the same odd result. We also discovered that this glitch was very fine tuned. The correct result of 18 appeared when we substituted 0.199999 for .2. However, when we ran:

```
PRINT INT(2.6*7-0.199999)
```

the seventh decimal place activated the bug and gave us the incorrect result of 17.

Sometimes floating point numbers just kind of float away from you. Has anyone found a way to get BASIC arithmetic to come down to earth?

# PULL. PULL. STICK. STICK. CHANGE PERFORMANCE THAT QUICK.

What you see here is a remarkable system that will change the personality of your IBM Personal Computer. A system that makes it possible for you to use your PC to develop applications that normally require the resources of a much bigger computer. A system that quite literally transforms your computer from personal to professional. Here's how:

## Easy As A,B,C

First you apply the character labels to your keyboard, then you plug in the custom ROM that will enable your PC to display these new characters. Third, you insert the disk and load the software to complete the change:

APL+PLUS®/PC System from STSC.

Now, instead of limiting yourself to off-the-shelf spreadsheets, word processors, or slow program development in BASIC, you can develop custom solutions to problems that previously were beyond the scope of your PC.

The APL+PLUS/PC System is a complete APL language processor

from STSC, the leading supplier of APL products and services for more than 14 years. It also includes STSC's business report formatting feature, communications capabilities, and data management features.

The APL+PLUS/PC System can interface to non-APL programs and data

**stsc**  
A Centel Company

files so you can integrate your other software packages with the APL+PLUS/PC. And APL programs developed on your PC will run on other desktop computers, minis, and mainframes that support APL. Software developers may license the APL+PLUS/PC System to develop APL applications for resale using a run-time version of the system.

## Everything You Need for Application Development

It's all here in our comprehensive package. In addition to the keypad labels, custom ROM, and software disk, you also get a reference manual, an introductory tutorial, and a widely used APL textbook. All for only \$595.\*

The APL+PLUS/PC System requires an IBM PC or IBM PC XT with PC DOS at least 192K RAM memory, and one floppy disk drive. To order APL for your PC, call or write STSC, Inc., 2115 East Jefferson Street, Rockville, Maryland 20852, (301) 984-5123.

\*U.S.A. price only.

tion services. Users may also install additional hardware or other MS-DOS based applications programs. These optional devices, programs, and phone services can be included as choices on the DunsPlus menus.

The DunsPlus system also can be connected to a company's own mainframe computers. DunsPlus provides binary synchronous IBM 3270 emulation, emulation of System Network Architecture (SNA) for the 3270 and 3770, and asynchronous terminal emulation.

Dun and Bradstreet intends to market DunsPlus as a complete system. There are no plans to sell the software and services to users who already own an IBM XT, or to offer systems built around other makes of personal computer. Robert Weissman, executive vice president of Dun & Bradstreet, said that DunsPlus couldn't provide the same high level of service if its customers had too wide a range of hardware. "If you want to have the DunsPlus, I'm sure someone in your office would love to have your present XT."

While Dun & Bradstreet hope that DunsPlus owners will use the system to access its information services, the company expects its new venture will pay its own way.

Several customers already have DunsPlus in beta test. It will be available commercially in February. For more information, contact DunsPlus, 187 Danbury Rd., Wilton, CT 06897, (203) 762-2511, or call DunsPlus branch offices in Chicago, Los Angeles, New York, San Francisco, and Stamford, Connecticut. ■

### THE EMPEROR'S NEW DEBUGGER

Frustrated with your hardware? Software? Manuals? Coworkers? State of Mind? Life in general? A new product, Flooby Dust, is ready to dissolve any sort of digital dilemma by applying a secret ingredient—humor.

When you reach for the Bufferin-lookalike box and bottle, you'll have in your hands a lifetime supply of Maximum Strength Flooby Dust, a computer cure-all in the grand tradition of Lydia Pinkham and snake oil—but without the sticky mess. The eight-page manual says you can sprinkle or pour the Flooby Dust over a troubled diskette, keyboard, or programmer's head, and trust that all will be well once its magical properties take effect.

Flooby Dust is available for \$2.95 from computer dealers or from its source, Wallace Micro-Mart Inc., 2619 N. University St., Peoria, IL 61604. This retailer focuses on Apple-related products, but its Flooby Dust is compatible with the IBM PC—as it is with anything else, for that matter.

Wallace Micro-Mart is holding a contest, through March 31, 1984, to find the best short descriptions of "My Favorite Flooby Dust Use." Wallace also produces Flooby Dust T-Shirts, Flooby Flappers, and Flooby Disks, all intended to dissipate any excess of gravity that may surround a computer.

### COBOL'S DEBUT

On the Sunday afternoon of August 7, viewers of KSTS in San Jose, California witnessed a television first. "Window on Computers" presented a COBOL program's source code, statement-by-statement, as it executed. When we heard about this broadcast, we said, "They might call that entertainment in Silicon Valley, but it won't play in Peoria without a lot more pizzaz!"

When we investigated this story, we found it was more interesting — PC-wise — than we expected. The broadcast was made possible by a PC-compatible software tool called *cobol animator*, the creation of Micro Focus Inc. *COBOL Animator* can be used to display COBOL source code as the program executes, at any speed of execution and with pauses at any point. Programmers can use it as a tool for walking step-by-step through a program to debug it or to understand how an existing program works.

*COBOL Animator* is available for \$800 in a version that works with the \$1,600 Level II COBOL, which is marketed as part of Digital Research's CP/M Library. The software tool is also provided as part of Micro Focus' new Personal COBOL, a version of the language for the IBM PC that lists for only \$299.

For more information on *COBOL Animator* and Personal COBOL, contact the Marketing Department of Micro Focus, Inc., 1860 Embarcadero Road #235, Palo Alto, CA 94303.

# THIS PC IS COOL, LIKE REAL COOL

Necessity is still the mother of invention. The latest proof comes from Analytic Information Processing (AIP), a California software development company that turned PC peripheral manufacturer when its PC didn't work.

When AIP was hired to design some private real estate management programs, the contractor gave the programmers a PC. AIP expected to run the PC 12 hours a day.

"The PC stopped several times a day," says Linda Baptiste, an AIP programmer. Among the myriad problems: the PC didn't feed

information to the printer properly, the disk drives started unexpectedly, or the computer began generating random characters on the screen. Sometimes the PC froze entirely. "It was hard to tell if the problem was with the programs we were testing or with the PC," Baptiste recalls.

Tracking the computer errors was no better. None of the wires were loose, and the diagnostic tests didn't show any problems. More confusing, the PC began to work again every time the programmers took off the cover to look under the hood.

Finally, someone guessed

that expansion cards working 12 hours a day in a closed box might get too hot—and that opening the machine would cool it off. The technicians outfitted the PC with a variety of expansion cards, then tested the circuits for changes in temperature and resistance. They found that overheating was less of a problem when the machine had all-IBM boards. "I think non-IBM boards come in marginally different sizes," Baptiste says. "Some may be slightly larger and block the air flow more than others." Baptiste suspects that the XT, with eight expansion slots, may run much hotter

than the five-card PC.

AIP mounted a small fan on the PC's chassis, under the system unit cover. That lowered inside temperatures by as much as 15 degrees—and rejuvenated the AIP PC. In addition to getting the real estate work done, AIP became a part-time PC-peripheral manufacturer.

Although sales are not yet spectacular, Baptiste hopes the fan—marketed as PCool—will provide a fairly simple solution for people with hot PCs. "One man said he'd cut a hole in the top of his PC to cool it off," Baptiste says. Another PC owner reported that he kept a can of Freeze Brain handy for cooling off his PC.

Information on the \$99.95 PCool is available from Mary Boal, product manager, at 415-837-2803. ■

# Personal computers can be somewhat intimidating. Get ProKey.

If you're like most people, you naturally assume that IBM personal computers are so advanced they practically run themselves. Plug it in and off it goes. Solving problems, making work easy, counting new profits while you drift off with headphones and Vivaldi.

Until you own one. And a fistful of software. Soon it becomes a battlefield of tedious typing, conflicting commands, picky protocols.

Grasp victory Get ProKey.<sup>TM</sup>

ProKey is a unique software program that actually operates your favorite software including WordStar, Visicalc, Lotus 1-2-3, dBase II and most others.

With ProKey you can recall frequently used phrases, headings, names, entire scripts with a single stroke. Accurately.

ProKey memorizes mindlessly complicated command sequences and, at the touch of a key, executes them automatically. Instantly.

Standardize a plethora of protocols with one simple personal command. Painlessly.

As you gain experience and confidence, ProKey grows with you. You'll be able to customize off-the-shelf software to your own personal or business requirements. Ultimately you'll use ProKey as a "super command center" operating your word processor, spreadsheet, database and graphics programs together to create a totally unique, incredibly productive system.

ProKey is available at most Computerland stores and wherever fine software is sold.

Once you use ProKey you'll wonder how you ever faced your IBM alone.

RoseSoft, Inc.  
4710 University Way, N.E.  
Suite 601  
Seattle, WA 98105  
(206) 524-2350

To run ProKey, you'll need an IBM Personal Computer or workalike, DOS (any version, including 2.0), and 64K of RAM (WordStar requires 96K).

WordStar, VisiCalc, Lotus 1-2-3 and dBase II are trademarks, respectively, of Micro Pro, VisiCorp, Lotus and Ashton-Tate.

## PRODUCT REVIEW

## TK! SOLVER TAKES ON A NEW LOOK

TK!Solver was created by the designers of VisiCalc. Although both programs use similar commands, this equation solving-program is rather different from a spreadsheet. A new version of the program, TK! Solver 1.2, is now available. The original version was reviewed by Mark Zachmann in PC, Volume 2 Number 4 ("The Versatile Variables Of TK!Solver").

What can you do with TK!Solver? A large set of simultaneous equations can be defined on a TK!Solver rules sheet. On a variables sheet, values can be specified for any combination of the variables. Then, when you type an exclamation mark (!), the program will output all the unspecified variables that can be calculated by the direct method. If any variables remain unsolved, TK!Solver will try to find answers using an iterative method that makes a series of guesses to find values that best satisfy the equations.

Software Arts claims that the program now can make use of PC-DOS 2.0 and the XT's hard disk. The old version could not read files from the hard disk; the new version will recognize a hard disk if you call it "c:". The

program diskette is still copy protected, but the overlay files can be copied to the hard disk, which makes it unnecessary to leave the program diskette in the drive after the start of each session. Also, the models in the separate TK!SolverPack diskettes are in files that can be saved on and used from the

mands began in the middle of a page of text explaining several topics. The last two Storage commands were on the next screen and there was no way to switch between the two pages.

While I used the program, I felt it took an awfully long time to digest changes to the models and to solve them—

On the whole, this update served the purpose of cleaning up the program, making it run faster and be usable with more systems. Perhaps a future version will take advantage of the 8087 math coprocessor's capabilities and double-precision numbers. TK!Solver is the sort of calculation-intensive program that could make great use of the 8087's power.

This update is available free of charge to all owners of TK!Solver who sent a license registration card to Software Arts. The manufacturer sent each registered owner one copy of the new program diskette; a second copy of the update is sent when the user sends back the two old diskettes in an enclosed mailer. That's a civil way to handle an update.

Software Arts provided two pages about the update to be placed in the program's manual. However, it didn't print sheets that could be swapped for pages in the old manual that contained outdated information.

It is still a rather complicated program to learn to use. However, the most challenging part of creating or using a TK!Solver model is understanding the field of expertise that lies behind the equations and formulas. If a user must deal with simultaneous equations frequently, the time that must be dedicated to learning and running the program should be well repaid by TK!Solver's flexible handling of calculations.

The screenshot shows two overlapping windows. The top window is titled 'TK! Status' and contains a table with columns: 'St Input', 'Name', 'Output', 'Unit', and 'Comment'. It lists variables for a compound interest calculation, such as 'FV' (Future value of invested amount), 'PV' (Present value of invested amount), 'R' (Annual nominal interest rate), 'N' (Length of time invested), 'F' (Frequency of compounding), and 'E' (Annual effective interest rate). The bottom window is titled 'RULE SHEET' and contains a list of rules for solving the equations, such as 'R1: FV = PV \* (1 + R/N)^N' and 'R2: PV = FV / (1 + R/N)^N'.

This screen shows portions of the Variables and Rules Sheets of the "Compound Interest Calculation" model found in the Financial Management TK!SolverPack. This model deals with 12 variables and 16 rules, which can be specified and solved in any combination.

hard disk.

The most annoying thing about the old version was how long it took to respond to requests for help. That's been improved in the new TK!Solver. When I requested help on the topic "math," it took 16 seconds before the old version displayed the first screen of explanations. With the updated TK!Solver, I only had to wait 4 seconds.

The text on the help screens still are not as well organized as they could be. When I asked for an explanation of the Storage (/S) commands, a list of these com-

slow at least relative to most other programs' operations. While I waited, I could forgive the slowness if I happened to remember that TK!Solver was taking the time to perform tasks other personal computer programs hadn't done before. Operations are somewhat faster in the new version, but users still have to do a lot of waiting. They might spend the time contemplating how much faster equation-solving programs will run once the idea of this sort of software gets to be as old-fashioned as spreadsheets.

# Compute and print client tax returns in minutes

on your microcomputer with  
**MICRO-TAX**

That's right, in just minutes you can have a client's completed tax return in your hand. Think about it... you increase client volume, you increase your profits. Plus, you save the cost of your computer service bureau—and you have complete client security.

**FEDERAL AND STATE PACKAGES TO MEET EVERY NEED.** MICRO-TAX<sup>®</sup> offers four Federal tax packages and 25 state packages (fully integrated with the Level II Program), so you can select the programs that best meet your needs:

**Level I—Federal Individual Package:** for individuals preparing their own taxes.

**Level II—Federal Professional Individual Package:** for accountants, registered agents, tax attorneys, and other tax professionals.

**Level III—Federal Partnership/Corporate Package:** for those who prepare Federal Partnership, Corporate, and Subchapter S returns.

**Level IV—Overseas Tax Package:** addresses the unique tax situations of United States Expatriates.

Levels II, III, and IV have a depreciation module and automatically compute underpayment penalties and minimum tax. In addition, Levels II and III automatically compute self-employment taxes, and Level II computes income averaging.

**FLEXIBLE DATA ENTRY.** With MICRO-TAX<sup>®</sup> you can organize data entry in a sequence similar to that of manual tax preparation, or you can choose another sequence. The menu drive system makes data entry simple.

**MULTIPLE PRINTING OPTIONS.** You can input client tax information at the time of interview and produce forms immediately, or enter data during the day and batch print returns at night. MICRO-TAX<sup>®</sup> prints your returns on IRS forms, IRS approved substitute forms, or with transparent overlays.

**TAXNET<sup>™</sup>—TELETEXT SUPPORT NETWORK.** MICRO-TAX<sup>®</sup> customers can now have access to an electronic mailbox and instantaneous memoboard through the TAXNET<sup>™</sup>.

teletext support network. With TAXNET<sup>™</sup>, you can send information, ask questions, get answers and updates—directly through your computer and a modem.

**TAX ORGANIZER.** Now MICRO-TAX<sup>®</sup> offers a Tax Organizer. You get both the software and the forms, so each year, you can send your clients an organizer with the prior year's client data printed on it.

**HARDWARE COMPATIBILITY.** MICRO-TAX<sup>®</sup> is compatible with your IBM PC/XT, DEC Rainbow, Radio Shack, or any other personal computer with CP/M-80, PC DOS, or MS DOS—\*from Apple<sup>®</sup> to Zenith<sup>®</sup>.

So, take the tedium out of tax preparation—save time and money—Call Micro-Tax<sup>®</sup> for complete details, or call your local dealer.

# LUCIE FJELDSTAD

An innovative IBM manager combines a micro with a mainframe by putting the essence of a 370 into a PC XT box.

BY CONNIE WINKLER

"It's my baby," said Lucie Fjeldstad, truly beaming as she fielded questions at the recent announcement of IBM's high-end PC, the XT/370.

For Fjeldstad, the XT/370 was a tyke only in comparison to the development project she brought in the month before: IBM's latest mid-sized processor, the 4381, capable of about 2 MIPS (millions of instructions per second). The PC XT on which the XT/370 is built can run about 100 KIPS (kilo instructions per second) or about 1/20th the speed. "That's where I get the baby ratio," adds Fjeldstad.

And, unlike the 4381, where there were several layers of managers, directing several hundred employees reporting to her, on the XT/370 she was the sole manager of the project with 50 staffers. Fjeldstad, who is marking her 15th anniversary with IBM, is product manager of processor development for IBM's General Technology Division (GTD), which develops and manufactures mid-sized systems, primarily out of Endicott, N.Y. With a bachelors and masters degrees in economics, she has moved through the IBM ranks from doing operations research in Palo Alto, to managing giant

programming projects in San Jose, to planning posts within GTD.

Fjeldstad did a neat thing within IBM. She melded the mainframe and micro worlds by putting the majority of the

key instructions from the System/370 central processing unit onto a board. And that board was slotted into the XT, along with an additional memory board.

Serious data processors have been dreaming for years about putting a 370 on a chip and indeed, IBM engineers talked about it several years ago in the company's *Systems Journal*.

"I'm bull-headed and stubborn," acknowledged Fjeldstad. She likens herself to a nimble running back: "I look for the hole in the line. A lot of it is experience."

"If you hit the line the first time and there's no hole, you find another way," she offers by explanation of how she was able to bring together the evolutionary 370 world and the revolutionary per-

sonal computer sides of IBM.

The actual XT/370 project took 14 months after she convinced higher-ups that the PC XT was the box for this innovative product. The PC box provided the best leverage for the new product from a cost/effectiveness point of view, told Fjeldstad.

This cost/benefit or requirements planning is Fjeldstad's forte and it's the job she was doing for the GTD before moving up to product manager and she talks a lot about it. It's balancing the requirements of the market and users against the engineering, manufacturing, marketing and revenue requirements within IBM. "Timing is key. You have to do it when the time is right," she says about delivering product to customers. "If I didn't do it, someone else would."

Picking the PC as the vehicle presented problems for the XT/370 designers and programmers: They couldn't "add a wire" or "change a line of code." Adds Fjeldstad, "it's difficult to tell a designer or developer, 'Don't go add on anything.'"

To make products like the XT/370 happen, Fjeldstad finds she spends 60 percent of her day planning meetings, 40 percent checking

products status, 20 percent on personnel matters such as appraisals and reviewing who's happy in their job or who're the top candidates for another job, and 40 percent on phone calls. That adds up to more than 100 percent, to make Fjeldstad's point.

She spends 12 hours a day in the office, either in Endicott or in one of IBM's headquarters locations in Westchester County, N.Y.

A skier and tennis player, she uses a sports analogy to explain: There's nothing wrong with an athlete who spends 50 hours a week training, but someone who spends that much time working "is sick."

"I like to work, too," said Fjeldstad. "It's fun."

That "pitch-in" attitude comes from growing up on a ranch in northern California. "It didn't matter if you were a boy or girl. There were always cows to be milked or fields plowed. I was always in the business," Fjeldstad recalls. "My dad made very sure that we were involved."

The day after the XT/370 announcement—after the press conference was recreated for the entire project group—Fjeldstad felt disappointed.

"I felt a letdown," she recalls. It was a numb feeling, one that she had postponed the month previous at the 4381 announcement because the baby was still to come.

The day after was a day she had booked only 100 percent. She went home early.

The next day got booked back up to 140 percent. "That's the best way to do it," she adds. "We have learned a lot. We know what we did right and wrong. It's time to do another." ■

Don't call her cheap. Call her beautiful.

# The Bonnie Blue™

## Word Processing System for the IBM Personal Computer

It's obvious what makes her so cheap, but what makes Bonnie Blue so beautiful? Bonnie Blue is a new and easy-to-use word processing program for the IBM Personal Computer.

**The Full System.** The Bonnie Blue System includes in one program a full screen Editor, a Printing module and a useful Toolbox. It includes the features you've come to expect, and more:

complete cursor control: by character, word, line, page up and down instantly; go to top, bottom of document; auto scroll towards top or bottom

word wrap  
margin justification, centering  
adjustable margins, tabs, indents  
reformat paragraphs  
move, copy, delete, paste blocks  
find with delete, insert, replace and wild card characters  
keyboard remapping  
multi-line headers, footers

Bonnie Blue can handle lines longer than the screen is wide, by horizontally scrolling the line. And, unlike some programs, Bonnie Blue lets you include any displayable character in your text, such as block graphics and foreign language characters.

**Unique Features.** With Bonnie Blue, you can "paint" display attributes onto your text, by the character, word, or line, or automatically as you enter text. With the monochrome adapter, you can paint any combination of underlined, bold, reverse video or blinking. With an 80 column monitor and the color/graphics adapter, this translates into a palette of 16 color combinations to choose from. And if your computer has both monitors, Bonnie Blue lets you use them both, shifting back and forth as you wish.

**Powerful Printing Module.** You can use these colors or display attributes to highlight text on the screen, and Bonnie Blue can remove them from a file when you want (all files created by Bonnie Blue are DOS standard). The Printing module understands these text attributes, and you can map them into any single printer function or combination.

For example, normally you would want underlined text to print underlined. But you can tell Bonnie Blue to print underlined characters as both underlined and bold. Bright text on the screen can mean double struck, or emphasized and in italics. You are at the controls.

The first Print formatting module supports all the text capabilities of the Epson MX series with Graftrax Plus. By the time this ad appears, we will be supporting other popular dot-matrix and letter quality printers.

More than thirty "dot" commands give you added control of the format of your finished document. You can send it to a disk file instead of the printer, or preview the final page formatting on the screen.

**Toolbox.** The Toolbox is a set of useful functions, called "filters" that allow you to extract information from your files and transform their content. With these tools, you can join files together, sort lines of text, count words, find and substitute patterns, etc. Writers and programmers find this a useful collection of productivity enhancers.

Bonnie Blue is also great for a hard disk system. A thorough User's Guide, complemented by help screens and roadmaps, make the Bonnie Blue an exceptionally easy-to-learn and easy-to-use system.

Order yours today, or send for our free brochure. Bonnie Blue is available exclusively from **Bonnie Blue Software**, P.O. Box 536, Liverpool, NY 13088.

IBM Personal Computer is a trademark of IBM Corp. Epson Graftrax Plus is a trademark of Epson America Inc.

# Great Prices! Great Service!

If you're looking for rock-bottom prices and fast, personal service, take a close look at 800-SOFTWARE.

Because we buy in volume, we're able to sell and service the products you want at prices that finally make some sense. But don't take our word for it. Compare and see for yourself.

## OUR SERVICE CAN'T BE BEAT.

We take care of you like our business depends on it. Because it does.

When you call 800-SOFTWARE, you get the fastest delivery available anywhere. Which means that nearly every order is filled the day we get it. And that our unique Order Tracking System™ is on the job, keeping tabs on your order, every step of the way.

Our giant inventory—one of the largest in the United States—also assures you of the fastest possible service. Everything's in stock so you don't have to wait.

Technical support? Business software expertise? Customer service? We've got it—and it's the best you'll find *anywhere*.

But, put us to the test. Let us prove what we've proven to satisfied customers around the world.

That our prices are lower. That our service is better. That there really and truly is a difference.

We look forward to your call.

TO ORDER CALL TOLL-FREE 800-227-4587

or 415-644-3611

Order Desk and Technical Support open:  
6:30 a.m. - 9:00 p.m. Monday through Friday  
10:00 a.m. to 4:00 p.m. Saturday and Sunday

# Everything You Should Know About BUSINESS GRAPHICS

(that you can do on your personal computer)

## And Didn't Know Who to Ask

**WHAT IS "BUSINESS GRAPHICS"?** Converting simple or complex numbers into easy-to-understand pictures in the form of charts or graphs — on paper for reports or on overhead transparencies or instant slides (with the Polaroid Palette) for presentations.

**WHY NEEDS IT?** Probably you do. With business graphics, anyone who has to present any kind of business data can communicate it faster and make it easier to understand. This means just about everybody in management, finance, sales, marketing, advertising, consulting, and investment counseling who communicates to almost anyone about almost anything in business.

You can show information on bar graphs, pie charts and scatter diagrams in a fraction of the time it takes to present reams of data or printouts. And because you don't have to wait for an artist to draw the chart or graph, the information can be up to date, like yesterday's sales figures.

**HOW DO YOU GET IT?** Easily, yourself, with the following:

1. Your IBM PC or Apple IIe and its monitor.

2. A PLOTTER, if you want presentation-quality color graphics, or a PRINTER (except if you have an Apple IIe), if you want black-and-white graphics.

3. CHART-MASTER, the best presentation-quality graphics software package.

**WHY CHART-MASTER?** Introduced in 1981, CHART-MASTER was the first software that, with a plotter, produced presentation-quality business graphics on a personal computer. Now in its sixth edition, it is the tried and proven, "bug free" state of the art in business graphics.

Other graphics or integrated spreadsheet/graphics packages are available. However, hundreds of business people like yourself (as well as computer and graphics experts) tell us that CHART-MASTER is easiest to use, provides the best quality charts and offers the greatest flexibility and variety of business graphics.

That's why companies like G.E., EXXON, DU PONT, GTE, EASTMAN KODAK, CITIBANK, 3M, UNION CARBIDE, MOTOROLA, DUN & BRADSTREET, WESTINGHOUSE, PROCTER & GAMBLE, HONEYWELL, GENERAL MOTORS, and PITNEY BOWES use CHART-MASTER to improve communications by making pictures out of numbers.

### CHART-MASTER SAVES YOU MONEY

— Instead of the \$25-\$50 cost of each chart from an art department or studio, charts from CHART-MASTER cost about 25¢ to \$2.00 depending on quantity.

**CHART-MASTER** will make you a graphics expert in minutes. It lets you easily convert your data or VisiCalc or Lotus 1-2-3 spreadsheet data into presentation-quality graphics (you'll find that integrated packages have very limited graphics capabilities when used alone).

**NEW! SIGN-MASTER** is a new companion product to CHART-MASTER which for the first time lets you transform ordinary-looking typed proposals into dynamic, colorful word presentations. With SIGN-MASTER, you can create headlines, sub-heads, lettering emphasis, or a variety of texts on reports, overhead transparencies, or slides. This, without the expense of typesetting or hand lettering.

**SIGN-MASTER** easily produces 6 different typefaces in 16 sizes and up to 8 colors, in an infinite variety of ways, on your IBM PC.

**IF YOU EVER HAVE A PROBLEM** or a question about CHART-MASTER, SIGN-MASTER or the hardware, you can reach a live, warm human being who will answer it, by calling the CHART-MASTER HOTLINE at Decision Resources (203) 222-1974.

The suggested retail price for CHART-MASTER is \$375, and for SIGN-MASTER is \$245.

For the name of your nearest CHART-MASTER or SIGN-MASTER dealer, call:

**DecisionResources**  
Software for Decision Makers  
25 Sylvan Rd. S. Westport, CT 06880  
(203) 222-1974

**BUSINESS GRAPHICS MAKE THINGS HAPPEN** — as shown by the following Wharton Business School research.

When graphics presentations in business meetings, using an overhead projector, were used:

**BUSINESS DECISIONS FAVORED THE GRAPHICS PRESENTER** — 68% favored the presenter's point of view when charts and graphs were used, only 32% favored the presenter when none were used.

**PRESENTERS WERE PERCEIVED AS PROS** — Presenters using charts and graphs were considered more professional, persuasive, effective than the presenters who used no graphics.

**GROUP AGREEMENT WAS GREATER** — 79% reached agreement in the group using a graphics presentation vs 58% in the control group using none.

**MEETINGS TOOK LESS TIME** — 28% less than when no charts, graphs or other visual aids were used.

# A new era dawns on the datascape™

## Introducing The Database Machine™.

In one bold stroke, COGENT has solved the problem of simultaneous distributed data access. A back-end database processor that incorporates Winchester control, database commands and a multi-tasking operating system.

**The ultimate Winchester Controller.** The Database Machine™ is the smartest, fastest LSI Winchester Controller on the datascape. Fully **six times** faster than the IBM XT fixed disc adapter. A 64K file writes in just over a tenth of a second!

**A true database co-processor.** With built-in database commands, The Database Machine™ turns software into fastware. You get shared file access, record locking and password security essential to serious business applications.

**Now networks really work.** The Database Machine™ ends frustrating slowdowns, giving every network user instantaneous access to the same files including those on other discs in the network.

If there's a PC on your corporate horizon, it's time The Database Machine™ dawned on you. Call COGENT today. (206) 455-3343

### The Database Machine™

- IBM-PC, IBM-XT and PC-3270 compatible
- PC-DOS, CP/M and UNIX compatible
- Imbedded database silicon software
- 8Mhz 80186 co-processor
- LSI Winchester controller
- 64K high-speed triple-ported buffer
- 128K multi-task RAM

# A New Year And A New Look

The arrival of 1984, with all its ominous overtones, brings only good things to PC Magazine readers, including a revamped magazine and a renewed commitment to serving you.

**I**t's 1984. That date has taken on such ominous connotations that everyone, whether they've read Orwell or not, pauses to think about where society and technology are heading. Is Big Brother here, or lurking in the shadows just around the corner?

Some chose to ignore the foreboding side of this new year by saying it's a year like any other. Others, zeroing in on our subconscious sensitivities, are capitalizing on 1984 by stamping it on our T-shirts—and on our minds.

At PC, because we are so entwined with technology, we work doubly hard to be open to both sides of the question. In this first issue of 1984, we present several perspectives on the deep and complex question of where technology is taking us. And we further explore the unavoidable Orwellian questions of 1984 with views from civil liberties lawyer Dorothy Samuels, and Jay Bloombecker, director of the National Center For Computer Crime Data.

The year 1984 also has new meaning for PC Magazine. We are bringing you a markedly new (dare we add, improved) magazine, put together by a bigger, experienced team of editors and writers. This first 1984 issue is dramatically different than any you've seen before.

The biggest change is that PC is going biweekly: Subscribers will now be receiv-

Bill Machrone

We present several perspectives on the deep and complex question of where technology is taking us.

ing PC every two weeks. This frequency allows us to add "PC News," a section with a newspaper framework that allows us to include late-breaking stories. The 12-page "PC News" will be the last section of the magazine to go to the printer. But we hope it will be the first section you turn

to for timely, informative reports on PC developments.

The biweekly format gives us more room for in-depth and comprehensive articles that will truly add to your general and technical understanding of the PC.

We know that you, our readers, are becoming increasingly sophisticated in your use of the PC. As professionals and managers in business, as lawyers, as writers, as doctors, as financial analysts you want to apply the PC to your jobs. Therefore, we've added special columns such as "Writing," "Medicine," and "Business/Finance" to discuss how PCs are being used on the job, and how you can use yours.

These regular features will delve into vertical applications for the PC that might not be of interest to more general PC users. Some columns, such as those on writing and on telecommunications, will appear in every issue. Others will be scheduled as needed to keep you abreast of field-specific developments. The writers are opinionated, interested, and knowledgeable insiders.

Our new guest editorials will draw on the expertise and opinions of industry leaders (or adamant followers) to give you new looks at the dynamic world of personal computers.

This first 1984 issue of PC also looks different. New typography and design by

# computer accessories

that organize, protect, and gain space...

NEW!

## INCREASE COMFORT

**ANTI-GLARE SCREEN FILTER**  
**Model #AG820 \$35.00**  
 Reduce eye strain and increase operator comfort with this screen filter for the IBM PC monochrome monitor. The filter reduces excessive glare from overhead lighting. It fits snugly into the face of the monitor due to the vinyl foam bordering the narrow but sturdy aluminum frame. The screen is made of black nylon monofilament fibers in a square weave.

## ORGANIZE & PROTECT

**ROLLTOP 100 DISK FILE™**  
**Model #RT100 \$36.00**  
 Twice the capacity (100 - 5-1/4" disks) of the leading "flip top" file. But it takes no more desk space! An outstanding design that combines contemporary styling with the elegance of a rolltop enclosure and a textured buff plastic body. It includes 10 diskette dividers and anti-slip feet. Locking Model #RT100L - \$46.00

## GAIN SPACE

**KEYBOARD STORAGE DRAWER**  
**Model #SS610 \$89.00**  
 This is the perfect solution to narrow corridors or typewriter return locations. The keyboard drawer rolls smoothly on industrial strength ball bearing slides. The drawer locks open for stability and has a built-in wrist rest pad. The 20 gauge metal frame has a baked enamel grey finish with the drawer in putty to match the IBM PC color scheme. Holds any keyboard 2-3/4" (h) x 19-3/4" (w) x 9-1/2" (d).  
**\$5.00 Shipping/Handling\***

## PROTECT

**DISK DRIVE COVER**  
**Model #DC310 \$10.00**  
 A cover to protect the IBM PC disk drive area from dust and dirt. Molded in black plastic to match the IBM styling. A vinyl foam seal prevents harmful elements from entering the disk drive area.  
**KEYBOARD COVER**  
**Model #KC210 \$12.00**  
 Protect your computer keyboard with our dustcover made from rigid smoked bronze plastic. A low silhouette design that fits keyboards such as the IBM PC and the Keytronic keyboard.

## INCREASE COMFORT

**EASY-VUE EASEL**  
**Model #EV410 \$20.00**  
 The ultimate design in a manual easel. Provides ideal viewing angle. Protective pads prevent skidding. 10" x 15" in size, it even properly displays an 8-1/2" x 11" three-ring binder. An elegant accessory in smoked bronze, molded from tough durable acrylic.

## INCREASE COMFORT

**TILT 'N' TURN**  
**Model #PA900 \$40.00**  
 Work easier! Reduce glare and eye strain, eliminate neck craning with this sturdy CRT display stand. Completely stable 30° tilt and 360° turn without removing CRT. Attractive molded heavy hard plastic and steel construction. Rubber pads on top and bottom assure no slipping. Fits any CRT with feet separation less than 11" in width and 10-1/4" in depth.

art director Mitch Shostak and his staff give the magazine a new, cleaner, crisper look: We hope you will find the editorial material more accessible and easier to read.

### Finding Your Way

One of our most frequently heard pleas is for more page numbers to help you more easily sort through the magazine (admittedly a big chore). We have heard you and will do our best to let you know where you are in the magazine, or where to find the advertisement for the product you've been tracking down for 2 months. Our newly designed table of contents should also help you make the best use of your time in reading *PC*.

There's also a new look to the January masthead: The *PC* team has been expanded to bring you this new magazine.

Jon Lazarus, who's done a super job guiding *PC* as editor, has moved up—literally upstairs—to become editorial director of Ziff-Davis's Consumer Computers and Electronics Magazine Division. That's 11 magazines, to date. Good Luck, Jon.

As the new editor of *PC I* will be coordinating other staff members and working to bring you informative articles that span the range of PC applications and interests. Look for more technical articles, more hands-on comparisons of new products, and some ground-breaking articles, the likes of which have never been seen before.

### The Newest Member

The latest member of our magazine family is *PCjr. Magazine*, announced with the unveiling of IBM's home-education-office computer, *PCjr.* At the helm of *PCjr.* is Corey Sandler, former executive editor of *PC*, who played such a key role in making *PC* happen in 1983.

Although Corey has moved down the hall, he hasn't left the pages of *PC Magazine*: His "Sandler's Screen" ruminations will be found in alternating issues of *PC*, and he will continue to contribute to

"PC Arcade" on a regular basis.

Shaping the biweekly issues of *PC* is now the joint responsibility of Mike Edelhart and Connie Winkler, our new executive

A top-notch staff  
and knowledgeable  
free-lance writers  
produce the best  
possible magazine  
for you.

editors. Mike will be working with articles and Connie will handle *PC News* and the columns.

Mike and Connie bring to *PC* a wealth of computer publishing experience. Mike has been an editor at *OMNI* and *Technology Magazines* and most recently was the computer power behind *Enter*, the computer magazine for teenagers from Children's Television Workshop.

He's a prolific writer, with two computer books off the press this year: *The Complete Computer Compendium* and *The OMNI-Macmillan Encyclopedia of On-Line Databases*.

Connie most recently tracked the computer information processing industry from the perspective of associate editor at *Management Technology*. She was formerly editor of *Computer Careers News* and a correspondent for *Computerworld*; she has worked for IBM, and has a new book out, *The Computer Careers Handbook*.

Connie and Mike are working hard to bring together a top-notch staff and knowledgeable free-lance writers to produce the best possible magazine for you. As IBM's announcement of the *PCjr* demonstrated, we are all working at top speed. Within 2 days we pulled together a special 8-page section in our December issue to give you the latest information on this incredible machine from IBM.

Our technical staff is growing too, so

we can provide the best in-depth comparison reviews, and more of them. As the former technical editor, I am committed to presentations that will be tutorial to newcomers, informative to the experienced, and interesting to all.

Pushing us all on to better and bigger stories and projects is Paul Somerson, who, in his new role as Special Projects Editor, will give you his unabashedly biased views of everything from IBM's Enhanced Basic for the *PCjr* to Scotland (from which he just returned) to the future of the human race in 1984.

Over the past several months, we have built a test laboratory with enough sophistication to wring out just about any PC-related product. We are committed to bringing you well-founded comparative reviews of hardware and software, backed up by the solid technical details you need to make informed purchasing decisions. You'll see what makes the IBM PC and its peripherals tick, from the power line through the processor circuitry to the characters on the screen and finally to paper. Everywhere along the way, there are decision points for you. Do you need an uninterrupted power supply? Are there differences between multifunction boards? Do removable Winchester disks work in the real world? We'll answer these questions and many others in the coming weeks. We won't neglect the software side, either. There's a wealth of new software out there and more coming each day. As easy as it is to get into a comfortable rut with a favorite product, we'll show you the newest and best, especially the exciting new integrated products and sophisticated database managers.

This new and enhanced lineup of people and editorial product underscores our commitment to being the best computer publication—whether you're a PC owner at home or a business user.

Throughout 1984 and beyond we welcome your ideas, comments, gripes, and brainstorming. We will do everything possible to represent you in the pages of the "new" *PC Magazine*. ■

# Plain Talk About Printers...

## DOT MATRIX

There've been some big changes in IBM-PC printer compatibility. Okidata's new Plug-n-Play ROMs (see below) make a Microline 92, 93 or 94 fully compatible with the IBM-PC, screen dump graphics & all. If you're interested in full compatibility, that's the package to get. We expect that other printer manufacturers will offer similar upgrades shortly.

C. ITOH

## Prowriter

C. Itoh's Prowriter (120 cps) features 10, 12, & 16 cpi, a proportional spacing quality font, double strike, double-width, sub/super scripts, dot graphics (180 x 144 dpi). The Prowriter 2 is the 136 column version.

Prowriter ..... \$399.95

Prowriter 2 ..... \$719.95

EPSON

## RX/FX Series

The FX-80 (180 cps) has a correspondence font, 10, 12 & 17 cpi, italics, double-strike/width/emphasis & dot graphics, plus a 2K buffer. Friction & pin feed is standard; the adjustable tractor is optional & cost extra. The FX-100 is the 136 column version & includes the adjustable tractor.

The RX-80 & RX-80 F/T (100 cps) are upgraded versions of the MX Series.

Epson FX/RX ..... \$CALL

MANNESMANN TALLY

## MT-160 L/180 L Spirit

The MT-160 L (180 cps) features 10, 12, 17 & 20 cpi, a correspondence font, italics, enhanced/boldface print, double-width, sub/super scripts & underlining, friction/tractor feed. Parallel & RS-232C interfaces standard. The MT-180 L is the 136 column version.

The Spirit (80 cps), Tally's new, low cost daisy printer, has 10, 12 & 17 cpi fonts, italics, friction/tractor feed, and a unique square-wire printhead. 80 columns & parallel only.

MT-160 L ..... \$540.95

MT-180 L ..... \$540.95

MT-Spirit ..... \$329.95

OKIDATA

## Microline Series

The Microline 92 (160 cps) is ideal for word processing. It features 10, 12 & 17 cpi, a correspondence font, double-width, emphasis/boldface, sub/super scripts, underlining, pin/traction feed (tractor is optional on the 92) & dot-addressable graphics (120 x 144 dpi). The 93 is the 136 column version. Parallel interfaces are standard; the RS-232C interface is optional.

The Microline 94 (132 col) is the Step 2 version, featuring 200 cps at 10, 12, & 17 cpi (w/double-width), all with a correspondence mode & dot-addressable graphics. Parallel or RS-232C interfaces available.

A new PROM called PC Plug-n-Play turns a 92, 93 or an 94 into an IBM-PC compatible printer, with full capabilities. You will sacrifice a few features (like 12 cpi) but the PROMs are worth it if total compatibility is your goal.

The Microline 52A (120 cps) is a daisy cruncher. Features 10 & 18 cpi (5/8 double-width). Dot-addressable graphics are optional. The 53A is the 136 column version.

Microline Series ..... \$CALL

PANASONIC

## KX-P1090

A smart entry by Panasonic, the KX-P1090 (80 cps) features 10, 12 & 18 cpi, italics, double-width, half-width, enhanced/bold print, dot graphics (120 x 144 dpi), friction/tractor feed & a 4,000,000 character ribbon. The Epson-compatible escape code sequences make it easy to install. Quiet printing & a sharp design make it ideal for home or office. Nationally serviced by Panasonic.

KX-P1090 ..... \$339.95

STAR MICRONICS

## Gemini 10X/15X Deita 10/15

The Gemini 10X (120 cps) features 10, 12 & 17 cpi, italics, a correspondence font, double-width, emphasis/boldface print, sub/super scripts, underlining, graphics (120 x 144 dpi), a 1K buffer & friction/tractor feed. The Gemini 15X is the 132 column version.

Gemini 10X ..... \$339.95

Gemini 15X ..... \$339.95

The Deita 10 (160 cps) features both parallel & RS-232C interfaces, & an 8K buffer, plus all the 10X features mentioned above. The Deita 15 is a 136 column version.

Gemini 10X ..... \$309.95

Deita 15 ..... \$459.95

Deita 10 ..... \$529.95

Deita 15 ..... \$CALL

TOSHIBA

## P1350

An exceptional printer that produces the best near-letter quality we've ever seen. The P1350 prints at 192 cps (100 cps in near-letter quality), & features 132 columns, 10 & 12 cpi (plus double-width) & a near-letter quality font with proportional spacing. It has all the sub/superscripting features you'd expect, plus dot graphics (180 x 180 dpi, Parallel or RS-232C interface (specify)).

P1350 ..... \$1759.95

## Other Dot Matrix Printers We Carry

ANADIX

DP-3501 ..... \$1199.95

DP-3601 ..... \$1299.95

DP-3825 ..... \$1399.95

## LETTER QUALITY

The new, low-speed letter-quality printers are making quality affordable. And the high-speed models are coming down in price too. Still, get a dot matrix printer for drafts & as a backup.

C. ITOH

## A10 Starwriter F10 Starwriter Printmaster

The C. Itoh Starwriter (40 cps) features 10 or 12 cpi, sub/super scripts, underlining, 8/8 lpi, 1/48" line feed, 1/120" horizontal resolution. It uses Oume code & Diablo wheels & ribbons. The A-10 Starwriter has the same specs, but it prints slower (20 cps). The Printmaster has the same specs, but it prints faster (55 cps). Both the Tractor Feed and the Sheet Feeder fit all three models.

A-10 Starwriter ..... \$509.95

F-10 Starwriter ..... \$519.95

Printmaster ..... \$1589.95

Tractor Feed ..... \$289.95

Single Bin Sheet Feeder (A10/F10) ..... \$619.95

SILVER REED

## EXP-550/500

The Silver Reed EXP-550 (17 cps) is a 132 column letter-quality printer with 10, 12 or 15 pitch, sub/super-script, underlining and true Diablo 1610 emulation, making it compatible with most word processing software. It's friction feed, and it features a page injector, an optional tractor is also available.

The EXP-500 (12 cps) is a 100 column letter-quality printer with the same specs as the EXP-550, but slower and without page inject.

EXP-550 (Parallel) ..... \$899.95

EXP-550 Tractor ..... \$139.95

EXP-500 (Parallel) ..... \$499.95

EXP-500 Tractor ..... \$129.95

NEC

## Spinwriters

The new 2000 Series are slower (20 cps), but they've retained all the quality of the 3500/7700 Series. Uses the same thimbles & ribbons.

2010/2030 ..... \$879.95

2050 ..... \$999.95

3530 ..... \$1399.95

3550 ..... \$1899.95

7710/7730 ..... \$2159.95

SMITH-CORONA

## Messenger

The Memory Correct III Messenger (the full name) is ideal for the home or small office. It combines the features of an electric typewriter and a letter-quality printer. It features 12 cps, 3 pitches (10, 12 & 15), variable line spacing, 10" writing line, backspacing & auto-correction. It comes complete with parallel/serial interface. Memory Correct III Messenger ..... \$629.95

QuadColor-2 ..... \$219.88

US/PARADISE

### MultiDisplay

Supports 32K graphics, with composite, RGB, PC monochrome display and a parallel port.

MultiDisplay ..... \$479.88

TECMAR

### Graphics Master

192K for RGB or composite display, supporting 480 non-interlaced RGB output.

Graphics Master ..... \$579.88

## EAGLE COMPUTER

We are now offering both the Columbia MPC and the Eagle PC-2 to our customers. These machines are IBM-PC compatible, with 128K RAM on board, two 320K disk drives, one parallel port, two RS-232C ports and bundled software packages.

The Eagle PC-2 includes MS-DOS, CP/M 86, plus Eagle-Writer and EagleCalc. The Eagle PC-2 also includes a monochrome monitor, with a resolution equal to the PC monitor. The PC-2 is ideal for first-time users. It's easy to learn & easy to use.

The Columbia MPC includes MS-DOS, CP/M 86, BASICA, Perfect Writer/Speller/Calc/Filer, Home Accountant Plus, Fast Graphs, Asynch Communications, a Macro Assembler, plus numerous utilities. This system is for more sophisticated users who have a PC at work and want a system at home or in a remote location.

Please call (603) 881-9855 for further specifications, price and delivery.

# Letters To PC

## More Language Talk

Bill Machrone's article on languages ("Microlinguistics: Languages For The PC," *PC*, Volume 2 Number 4) was both timely and informative but left several key questions unanswered.

It was not clear which of the 10 languages Machrone considers suitable as general purpose languages, as opposed to those he considers more suitable for specific tasks.

The term "tight code" was not explained. Does it mean that the object files for some compiled languages will be smaller than for others accomplishing the same task?

One last point: What technical mystery prevents companies from providing interpretive (interactive) debugging capability as a utility with language compilers?

Wayne Sefton  
Mendocino, California

Bill Machrone replies:

*I'll have to refer you back to "Summing it Up" for the best general-purpose languages. BASIC, Pascal and Logo will give you the fastest return on your time and effort investment, while C and PL/I will require more study. They are all general purpose. dBase is mostly for records management functions and the others are either commercial standards or for more specific applications.*

*"Tight code" is a sloppy phrase. In one context it means well-written, economically expressed source programs.*

*The other meaning refers to the size and efficiency of the compiler's output.*

*Many have asked your final question and a few have even answered it. One such product is Micro Focus's COBOL Animator. Another is Morgan Computing's Professional BASIC. We'd be interested to hear about other products that include this capability as a utility.*

Your concern about reader's letters will certainly disappear after the articles on languages in the September issue. Most experienced programmers will find areas of disagreement with the opinions expressed—and so do I!

I'm glad you presented two views of BASIC; one author suggested that it offered portability (an incredible opinion!) and another pointed out the truth: there are many versions of BASIC that are almost impossible to translate. There are tremendous differences in file structure alone.

COBOL seemed to be maligned as

a micro language. Believe it or not, I chose COBOL as my business language. Why? Here's the rundown: It offers the greatest portability in running on numerous systems. Screen handling techniques are built into the language. Excellent file handling techniques (specifically indexed files and indexed files with duplicates) are built into the language and are extremely easy to use, virtually eliminating sorting. Record lock-out techniques are built into the language for multi-user systems. The same programs can frequently be used even if additions are made to the number of fields in a record, thus minimizing time spent on program modifications. Finally, the compiler is easy to use.

Language purists frequently criticize the GOTO statement. Frankly, some applications are virtually impossible to write, or require gigantic increases in the amount of code. For example, in our business applications, we allow users to enter a control code and jump back to previous fields on a screen if they see they have made an error. The GOTO is almost imperative.

A highly structured language is not necessarily a practical solution to the needs of business programming. I'll be the first to admit that despite my praise of COBOL, it has its own limitations and programmer frustrations. A near-perfect language simply doesn't exist at this time.

Tom Stover  
Gering, Nebraska

### Encore, Encore!

Paul Somerson's lead article, "Goblins, Gremlins, And Glitches," really hit the mark (*PC*, Volume 2 Number 5). I have lived with my PC, Quadboard, and *WordStar* (plus *MailMerge* and, thank goodness, *ProKey*) for nearly a year, and the episodes all rang true for me. Oh, so true! Let's see more from Somerson. I like his easy, cogent style.

Thomas R. Thurmond  
Vacaville, California

### King Me

Thank you for reviewing *Checkers for Beginners* ("PC Arcade," *PC*, Volume 2 Number 5). I created the program to entertain my children back when there was little game software to run on our family's new PC.

The programs first skill level, which Corey Sandler reviewed, was designed to make the PC a relatively easy opponent to beat, so that young players can feel a mastery over the computer instead of feeling intimidated by it. The second skill level, which was not reviewed, has many more advanced playing features to entertain and challenge more seasoned players.

Writing the program on the versatile and responsive IBM PC was truly a labor of love and I am pleased that it provides entertainment for others.

John E. Hoel  
Springfield, Virginia

I chuckled when I read Corey Sandler's comment that the IBM checker program made him wait 8 seconds before he beat it. Think a moment—that's why that feature exists!

Seriously, I used to have a game of micro chess for an Apple II computer (I now have an IBM-compatible Zenith Z-100). When the game checkedmate, it made a sound like "Heh Heh Heh Heh." When I checkedmate it, however, it sounded like a dying cat. The words "You win" sheepishly ap-

peared on the center of the screen.

I also liked Sandler's story about the horse race predictor program ("The \$2 Sure Thing," *PC*, Volume 2 Number 4). X=5 indeed.

Dennis Baer  
Farmingdale, New York

### Keep Biding Your Time

I thoroughly enjoyed David Whitehouse's chess game reviews ("Biding Your Time With Computer Chess," *PC*, Volume 2 Number 4). Being a fair chess player (1600 or so) and the owner of a couple of IBM PCs, I have been eagerly awaiting a chess program worthy of a 16 bit processor. Whitehouse's article convinced me to keep on waiting.

I recently saw a review in another magazine of a different chess program for the PC, *Bluebush Chess*. It received high marks, but I'm afraid the reviewer didn't go into as much depth of analysis as Whitehouse did in *PC*.

I would value Whitehouse's opinion on *Bluebush Chess*.

Dean Ballard  
Seattle, Washington

David Whitehouse replies:

*I had a chance to look at Bluebush Chess about a month ago, and it is definitely better than either Chess Partner or SPOC, the programs I reviewed in PC. The graphics are good, it only uses 64K RAM, and it has a fair variety of levels. Still, it needs improvement. There is no opening "book," and it cannot go back on retrieve games from the disk. Worst of all, the game will repeat itself at the same level if you let it. I quickly found a line in the Vienna game where I can repeatedly play the same game out to mate. So while it's an improvement, there are certainly even better games to come.*

*Although you can't use your PC for them, I would still recommend one of the standalone games.*

### Of Mice, Moths, and Smoke

In Bill Machrone's article "Run It Till It Breaks" (*PC*, Volume 2 Number 5), he says, "The accessory that makes me laugh the most is the cover that fits over the drive." While disk drive covers may be for "compulsives," Machrone may be interested to learn that people have purchased covers for other reasons: mice, moths, and palmetto bugs had entered their PCs through the drive opening.

Also, my partner's father had a small fire in his office and found that the disk drive cover prevented smoke damage.

These PC predators do exist. Don't laugh at the usefulness of the product; you might need it someday.

Nat Hellman III  
President,  
MicroComputer  
Accessories, Inc.  
Los Angeles, California

### And The Winner Is . . .

After reading Lindsay Van Gelder's admittedly grouchy review, "Programs That Polish The Processed Word" (*PC*, Volume 2 Number 5), I pulled out Volume 1 Number 7 and reread Lawrence Magid's review of the *Random House Proofreader*.

Sure enough, all the reasons that I bought *Proofreader* after first reading Magid's review are still true.

As one who edits and proofreads the technical documents of a systems programmer-turned consultant, I have found the *Proofreader* indispensable. Systems programmers, by genetic composition, are poor spellers who quite often invent words when their nontechnical vocabulary abounds.

True, the *Proofreader* is slow (compared to what?). True, one must build an auxiliary dictionary peculiar to one's profession. True, word tense and usage are not checked. However, on a

(continued)

# THE COLUMBIA IBM-PC COMPATIBLES. THEY REWARD TWO BUSINESS VIRTUES: FORESIGHT AND CUNNING.

## **Trust your instincts.**

While others rushed out to buy an IBM® PC, you waited and watched. You knew prices would come down and software would get better.

Now we have a reward for your patience: the Columbia family of IBM-PC compatible computers. It's a choice of systems and software no one else can match.

The Columbia line includes the VP Portable which lets you work anywhere, any time. There's also the MPC, our desktop model, available in dual floppy disk or 10MB hard disk drive. Compatible with each other and the IBM-PC, as well.

## **Foresight led you to our IBM-PC compatibility.**

We start you with more operating systems than IBM, even more than other IBM-PC compatibles (MS-DOS® and CP/M® 86). Which means you have immediate access to all the latest business and financial software.

## **Free software that's a steal.**

Thousands of dollars worth of free software come with every Columbia computer. Columbia Tutor gives you a fast, comfortable start. Perfect Software® covers your word processing, spreadsheeting, and filing needs. Fast Graphs® turns facts and figures into graphs and charts. And asynchronous communications lets you share information with other computers.

For your sense of self, we give you Home Accountant Plus®, games, and two programming languages so you'll feel like an eleven year old genius.

## **Responsive service. Above and beyond.**

175 local Bell & Howell service centers stand ready to maintain your Columbia computer at a moment's notice.

## **Prices start at \$2995. The phone call is free.**

Now, while you're feeling shrewd, call toll free for the Columbia dealer nearest you. Then, see for yourself how the Columbia Compatibles can reward your business virtues.

**800-638-7866**

## **COLUMBIA**

**DATA PRODUCTS, INC.**

Columbia Data Products, Inc.  
9150 Rumsey Road, Columbia, MD 21045

**CIRCLE 168 ON READER SERVICE CARD**

## LETTERS

recent weekend I spent over three hours reviewing a 66K design document. The *Proofreader* arrived Monday morning, and I quickly discovered 56 errors that I had overlooked during several readings.

The document was presented to IBM the following day in a conference room full of people. The embarrassment saved on this one project alone more than justified the modest cost of the program.

Of course, professional writers are more proficient at this sort of thing than us plain old humans—as they should be. However, all of Lindsay Van Gelder's grouching aside, I can wholeheartedly recommend *Proofreader*, or any good spelling checker, as an indispensable tool for generating documentation you don't have to be ashamed of. I plan on ordering the *Electronic Thesaurus* as soon as I finish this letter.

Now, as soon as Dick Brass gets his grammar program to the point where it can be used with any word processor, I won't have to worry about my grammar no more.

Tons of praise for an excellent magazine.

J. David Gardner  
Mauldin, South Carolina

*Congratulations, J. David Gardner! You've written the winning "Better Letter." We hope you can find a word processor that works well with the Proofreader.*

*Keep those letters coming, folks. We love to get mail.—Ed.*

### Unix or Bust

Where are your journalistic gumshoes? I'm tired of waiting to find out when (or is it if?) PC-DOS will be transformed by the magic wands of IBM and Microsoft into a true Unixoid. Should I buy IBM's C compiler now, or wait? Should I go whole hog and buy a Unixoid-cum-C system now? Go

for broke and pick up Xenix on a 68000 board?

I want it both ways. An old and devoted lover of Unix on PDPs, I'm not hooked on all the glorious software that runs under PC-DOS (not to mention the hardware). If I wait, will I get a Unix that will still let me play with dBase II and *SuperCalc*? Will they throw in Unix's adult word processors and text editors, *Ex*, *Vi*, and *Nraff*? Will the C compiler utilize the 8087? Will all the software vendors update to Unix? Will DOS 3.0 cost \$2,000?

Come on, you guys. Tell me the future. Tell me what I want to hear!

David M. Graber  
Three Rivers, California

*We're C fans and PC fans, but Unix may be asking too much of that wheezing 8088. Still, we'll review Venix, QNX, Coherent and similar products in upcoming issues. For now? Redo your DOS 2.0 shell to look like Unix and give the new Digital Research C a try. By the way, Ex and Vi are adult text editors the way an AWACS is an adult flying machine—idiosyncratic, rather overspecialized, but effective in its place.—Ed.*

### Compu-Cheaters

Last week our company received a letter from a firm called Compu-Chart Computer Services in Coral Springs, Florida. The letter was advertising the service this firm provides: They will write a "favorable review" of not less than 1000 words and send it to all major computer publications. The cost to the software company of this review is \$250.

The letter states: "Since most magazines must adhere to a certain ratio of ads to editorial content, independent reviews and articles are generally welcomed and usually get published soon after they are submitted. This is FREE advertising!"

We have always enjoyed your pub-

lication and have found your articles both informative and factual. We hope that you are aware of this company and others like it, and we urge you to discourage them from such practices. We feel that these biased reviews, if published, will become a major liability to the computer software industry.

Mark W. Turner  
Vice President, MTS Inc.  
Niceville, Florida

*PC goes to great lengths to ensure the objectivity of software and hardware reviews. We never accept reviews from public relations or advertising firms. Our reviewers are experienced in the fields they cover. They always have opinions and are not afraid to describe a product's shortcomings. We promote comparison articles whenever possible and generally review only commercially available products, not developmental or experimental versions.—Ed.*

### Once and for All

They say the third time is the charm, so perhaps the third attempt at the DOS CLS (clear screen) command will get it right ("User-To-User," PC, Volume 2 Number 2; "Letters to PC," Volume 2 Number 5). I'm afraid the corrected data given in James Anderson's letter was itself in error. Though I'm not as familiar with my Technical Reference Manual as Anderson, it didn't take me long to compare the two sets of data and figure out the correct set, which should read:

B9 00 00 BA 79 24 B7 07 B8 00

06 CD

10 BA 00 B7 00 B4 02 CD 10 C3

Somehow the B4 byte in Green's listing became BA in Anderson's, with rather curious results.

James H. Johnson  
Alpharetta, Georgia

*There's one thing that's worse than correcting a mistake: correcting a*

*With an AST Research Multifunction Board, you can realize the full potential of your IBM PC or PC-XT without wasting valuable slot space. By combining your memory and input/output requirements on a single card, you can take advantage of more of the capabilities IBM designed into the PC, while leaving space for future enhancements as they are introduced.*

## **AST Research Multifunction Boards can add the following features to your PC:**

- **User Memory from 64K to 512K**—When added to your existing system memory, brings a PC up to its maximum of 640K. This enables you to run larger spreadsheets, create larger in-memory databases, or you can use the additional memory along with the supplied AST SuperPak<sup>®</sup> software for print spooling or for simulating floppy drives to increase your PC's throughput.
- **Serial Ports**—By connecting a modem to a serial (async) port, your PC can communicate with other computers over telephone lines. By connecting a serial printer, you can obtain high quality print output. Other serial devices such as a plotter or mouse may also be connected to a serial port. The PC allows for the installation of up to two serial ports.

**Parallel Ports** — The parallel port is used to connect a parallel printer to your PC. A parallel printer typically uses a dot-matrix output which is suitable for high-speed draft quality printouts. The PC allows for the installation of up to three parallel ports.

**Clock Calendar** — With the on board battery, the clock-calendar feature will maintain the correct date and time, even when the PC is turned off. This feature eliminates the need for typing in this information each time you power up your computer.

**Game Adapter** — The game adapter port allows you to connect an IBM-type joystick to your PC so you can play the multitude of arcade-quality games which take full advantage of the PC's graphic capabilities. Or you

can use the joystick input for other applications by writing your own programs.

• **SuperPak** — Every AST Research Multifunction Board comes with an AST SuperPak diskette containing programs for setting and accessing the clock, as well as SuperDrive™ and SuperSpool™, the most powerful RAM disk and print spooler available for PC-DOS. With SuperDrive you can use your PC's memory for simulating one to four floppy drives, from 20K to 380K each. SuperSpool allows you to set aside memory (from 4K to 512K) as a print buffer; SuperSpool sends output to the printer in the background while you execute your program in the foreground. With SuperDrive and SuperSpool, you can significantly improve your PC's operating speed.

• **Proven Compatibility** — All AST Research hardware and software products are 100% compatible with all versions of the PC and PC-XT as well as the Compaq and other PC look-alikes, and are 100% compatible with PC-DOS 1.1 and 2.0.

• **Warranty** — All AST Research products are backed with a one year limited warranty covering parts and labor with an optional paid second year warranty available.

Of course, all AST Research Multifunction Boards come with the **AST "PLUS,"** our unsurpassed reputation for quality, reliability, after-the-sale support, and overall design excellence which give our products the best price/performance ratio in the industry!

## LETTERS

*correction. Our apologies to readers who have been trying to clear their screens since July, and to James Anderson, who did provide us with the correct listing. We flubbed it when we retyped it. Now go clear your screens!—Ed.*

### Wounded Ego

My first published letter to PC appeared in the August issue (PC, Volume 2 Number 3). The very next month, you issue a plea for better letters. This is a grievous blow to my self-esteem.

Anthony Barcellos  
Davis, California

*Relax. You are loved. Your August letter told us new things about one of our article topics (fractal algorithms for graphics). It was one of the good letters that whets our appetite for more.—Ed.*

### The ANSI.SYS Answer Cont'd

You said to write if something in PC struck a nerve. Well, something did: "how to" articles that don't really explain "how to." Case in point: Kenneth Wood's article "Defining Function Keys With DOS 2.0" (PC, Volume 2 Number 1). Wood stated that the DOS utility ANSI.SYS could be used to redefine keys, and he gave a program example written in C. He also stated that the same could be done in any language.

The point of the article was to illustrate the use of ANSI.SYS, which Chapter 13 of the DOS 2.0 manual doesn't quite manage to explain. In "Letters To PC" (Volume 2 Number 4), Wood replies to a puzzled reader who couldn't get ANSI.SYS to work through a BASIC program that "BASIC bypasses the operating system to get its input characters." Nice of him to let us know, but how does one use ANSI.SYS if the only language one has is BASIC? No help from Wood.

That really frustrated me. I've been using mainframes and minis for close to 10 years to do statistical analysis, bibliographic storage and retrieval, and text processing. Text processing on these machines is a laborious affair that involves entering text and formatting commands with a text editor, then processing the file with the text processing program. I was looking for something simpler to use, something interactive, when the IBM PC came on the market.

I was ecstatic when I saw its character set, and figured someone would soon find a way to get French characters (like é, â, è, à, ù) from the keyboard to the screen to the printer. I was tired of typing "stand-in" characters that I later replaced with accent-backspace-character sequences in order to simulate French characters on mainframes.

I purchased a PC as soon as I could, in December 1981, and I have been using it as a data entry machine and smart terminal. I still use a mainframe for text processing until some suitable word processing software becomes available for the PC.

I am still waiting. Some word processing programs that work the way I would like are available in Quebec, with French characters on the keyboard and on the screen: *L'éditeur PC* (a translation of *WordWord*) and a patched version of *Volkswriter*. But I need something that will process footnotes properly, deal with sub- and superscripts, and lengthy documents (30 to 50 pages) with a modest amount of memory.

DOS 2.0 seemed to be the answer to my problems. The descriptions of ANSI.SYS that I read make it sound like a snap to take a good word processor and redefine some keys to my liking. I managed to get DOS 2.0, only to be left so helpless by Chapter 13 of the manual and Wood's article that I resigned myself to plod along as

I had always done in the past.

Then, late at night, after reading Wood's reply in the September letters column and remembering a phrase about standard input and output in Chapter 13 of the DOS manual, I was struck by an idea. How does one do I/O on a computer without going through BASIC? Why, with DOS, of course! So using BASIC, I created a file containing the Keyboard Key Reassignment character sequences I wanted, and then asked DOS to TYPE that file. The cursor raced down the screen, obviously typing invisible characters. I tried the reassigned keys. They worked! I created another file to restore the key assignments to their standard keyboard layout. I made up a .BAT file to convert the French characters to character sequences the mainframe text processing programs will understand.

I can now enter text on the PC with EDLIN, easily proofread what I've typed, then dump the file on the mainframe. Maybe soon I will be able to use a text processor on my PC.

José E. Igartua  
Montreal, Quebec

### Corrections

Okiprint, from The Software Factory, does not require a color monitor to operate properly ("New On The Market," PC, Volume 2 Number 5).

Zuron, from Zee Programming, does require a color monitor to work. In addition, the game's full name is *Zuron Defender* ("New On The Market," PC, Volume 2 Number 6).

The charts illustrating "Battle Of The Network Stars," (PC, Volume 2 Number 6) were incorrectly labeled. The chart on page 94 should read "File Read Time." The chart on page 95 should read "File Create Time." The tested file read time for PC Net is 350, not 35.

# A real fish story.

by Brett Kirk  
Owner  
Poseidon Aquatics

"Our business is wholesaling tropical fish to pet stores. We're not a large-sized company, but we have one whopper of an inventory-control problem. That's where dBASE II® comes in."

## The one that didn't get away.

"We needed a fast program, and dBASE II, the relational database management system from Ashton-Tate, gave us the speed we needed to quickly log in our weekly live-fish shipment in terms of total numbers received, the kind and numbers of each different type, the cost per fish—all critical factors in determining our pricing and being able to pass along savings to our customers whenever possible without hanging us out to dry profitwise.

"We're sure glad we bought dBASE II when we did. I think our customers are glad, too."

**Once you try dBASE II,  
you'll be hooked.**

If you're up to your ears with data

that has to be managed quickly and efficiently, dBASE II can really help you stay afloat.

For all the particulars, contact Ashton-Tate, 10150 West Jefferson Boulevard, Culver City, CA 90230. (800) 437-4329, Ext.214. In the U.K., call (0908) 568866.

# Whaddya Show 'em When They Say 'Show Us'

## PC-Showoff!

Okay, they all know you just invested in a new IBM Personal Computer. Most of them figure they'll have to get one some day. Most of them want to see fireworks. Most of them expect to see words and numbers. After all, the IBM is a serious machine.

Now, what are you going to show them when they say, "Show us"? Surprise them. Impress them. Impress yourself. Show 'em PC-Showoff!

- Explode bombshells in living color.
- Design your own personal rainbows.
- Set off roman candles in 16 colors.

PC-Showoff! will turn that mild-mannered machine into a show-stopper. And you into a guaranteed crowd-pleaser. There's more fun to an IBM than just opening the box. Let

PC-Showoff! show you how. So the next time the gang asks for a look at your new "toy", show 'em your stuff! And ours. PC-Showoff!

At dealers, or order direct, \$39.95 + \$2.00 handling. SoftStyle, Suite 200, Dept. C, 7192 Kalaniana'ole Hwy., Honolulu, Hawaii 96825 Telephone: (808) 396-6368 Master Card and VISA accepted.

# THIS WEAPON JUST WIPED OUT 10 WEST COAST OFFICES AND 70 PAGES OF ORDERS:

IBM, Eagle, Columbia, Compaq, Kaypro, Otrona, TI, Victor or Zenith users: now give your files total protection — with Alloy's PC-BACKUP.®

Information wipe-out can be a costly, time-consuming nightmare that Alloy's PC-Backup can easily help you avoid. In fact, Alloy's PC-Backup works like your business does: it is file-oriented, backing up files in an organized way.

Alloy's PC-Backup is time and cost-effective precisely because it never lets you lose important data. Even more: only Alloy can give you high performance storage/retrieval and protection at the right price. And it even works with the IBM Expansion chassis.

Designed exclusively for small to large businesses, some of the features that make Alloy's PC-Backup the standard among users of major PCs are:

- Winchester hard disk backup and restore
- Comprehensive menu driven software package (Alloy's industry standard Tape Interchange Package)
- High speed data transfers
- Up to 16.5 Mbytes of data per cartridge
- File-oriented backup

Also available, Alloy's new PC-9/TRACK tape drive, for backup with mainframe compatibility.

### Our Policy

- We accept VISA, Mastercard, Money, Orders, Credit Checks, Cashiers, Checks, Personal Checks, Wire Transfer.
- No surcharge added on VISA and Mastercard.
- Add-on order will be processed and shipped only to clear.
- COD (Invoices \$500. Cash or Certified check on delivery. Please use local phone number for order status, inquire if items subject to change without notice.

**SHIPPING (U.S.):** For monitors, printers, and hard drives add 2% to all orders. Blue later and Next Day Available. For all other items add 14%. Most orders shipped next day.

Computers are designed to compute—not print. That's why Daisywriter has a built-in buffer memory to let it print while your computer is free to do your next computing job. No unproductive waiting.

It's a large buffer too—48 Kbytes. That's 24 pages of text.

Of course, Daisywriter works with all leading comput-

ers and software packages. It even includes its own word processing, diagnostics and graphics software. That makes Daisywriter almost a word processor itself!

Big buffer memory... built-in software... plug-to-plug compatibility with any computer. They're all standard when you buy Daisywriter—

only \$1495.\*

Get a demonstration at your local computer store. Today.

# PC Mouse works wonders.

**Works with Lotus 1-2-3, VisiCalc, VisiON, WordStar, Volkswriter, IBM Personal Editor, Multiplan and Microsoft Word.**

**Works with existing hardware and software.**

No modifications are required. PC Mouse connects to your IBM PC, PC-XT and compatible PC through the RS-232 port. Software installation is a one-time, one-line procedure.

## **Helps you work quickly.**

PC Mouse is ideally suited for moving the cursor. It's fast. Eliminates using the cursor keys. Use the pop-up menu to enter a command by pressing a button on the mouse. It's simple. Nothing to memorize.

## **And your dealer can make it work for you.**

Clearly, PC Mouse does more. And your dealer is waiting to demonstrate how it can work wonders. PC Mouse is available immediately for \$295.00 complete.

For more details, contact Mouse Systems, 2336H Walsh Avenue, Santa Clara, CA 95051. Telephone (408) 988-0211 or Telex 467848.

# Now you can buy IBM software at a convenient new location.

## Introducing the ONE POINT Electronic Catalog.™

Now you can get a complete listing and evaluation of *all* IBM compatible business software delivered electronically to your computer.

And you can buy this software at extremely low prices. 7 days a week, 24 hours a day.

It's called the ONE POINT Electronic Catalog and it takes all the hard parts out of buying software.

The catalog comes to you via your telephone modem and is updated daily. So you can search for programs, get evaluations and purchase software all with one phone call.

Each listing includes a description as well as evaluation comments from several sources. So you can be sure of buying the software best suited to your particular needs.

And since you buy directly from ITM, you pay far below retail prices.

Subscribing to the catalog costs only \$100. And an average search costs only about \$5.

So if you want to shop for software without ever leaving your hardware, call: (800) 334-3404 or write ITM, 2835 Mitchell Dr., Walnut Creek, CA 94598. Ask about our free demonstration.

# ITM™

# TRANSEND PC. WE DON'T PROMISE THAT IT WILL INCREASE YOUR PRODUCTIVITY.

## WE GUARANTEE IT.

### TRANSEND

THE WORLD JUST KEEPS GETTING SMALLER.

Instant electronic mail. With Transend PC communications software, you can correspond instantly with other computer users—at less than 10% of the cost of overnight mail. Transend PC handles all the communications protocols and procedures for you.

You can schedule automatic mail directly to and from individual PCs anytime, day or night. With services like SourceMail™ and OnTyme®, your PC can send mail even when the receiving computer is busy.

Build your own network. Transend PC lets you build a network without local area network equipment. All you need is the name, phone number, and/or ID number of your network members.

Instant electronic office. Transend PC turns your IBM PC into a powerful workstation. Terminal options let you communicate with virtually any other computer: Apples®, compatible personal computers, mainframes, and information services like THE SOURCE™.

A built-in message editor lets you process text easily. And Transend PC displays your desktop (including IN and OUT BASKETS) on the screen so you can go to work without having to think about software.

The guarantee. Try Transend PC on your IBM PC. If you're not satisfied, return it for a full refund.

For more information, ask for a free copy of *The Who, What, Why, How and When of Electronic Communications* from Transend.

# The New Generation In Word Processing

## OfficeWriter™

**Finally, there is word processing for the PC worthy of the business community!** OfficeWriter combines exceptional power and simplicity to bring you a word processor for the IBM PC that makes sense—it's easy to learn, easy to use, and incredibly versatile.

Until now, most word processors were modeled after WordStar—they were often cumbersome, confusing, and required lengthy training sessions. OfficeWriter is a new generation word processor, patterned after dedicated systems such as Wang and Lanier.

**We designed OfficeWriter with the first time user in mind.** Our tutorial and practice documents show you how to put OfficeWriter to work immediately.

OfficeWriter's careful human engineering lets you concentrate on writing rather than operating your word processor. You initiate any editing function by pressing a single labeled key—there's no need to memorize complicated command sequences.

And OfficeWriter's dynamic screen formatting constantly adjusts your text, so what you see on the screen is what you'll get on paper.

If you have a problem, our context sensitive "Help" screens provide information specific to the function you're using.

**We didn't sacrifice power to make OfficeWriter easy to use.** You get all the editing features you expect and then some—like document merge, pagination, and text transfer between documents.

And OfficeWriter is reasonably priced at \$325, including our full guarantee.

Ask for OfficeWriter at your local computer dealer, or call us to see the difference a new generation can make.

# Conscience In Computing

Illegal use of the computer is a threat to all of us. To control computer crime, we must protect our own data and teach our children to respect information power.

The world appears to be careening as never before toward an unknown cybernetic future. We look around and see new industries, new professions, even new forms of crime—all created or influenced by computers.

Crime demonstrates perfectly the dramatic changes in our computer-based culture. For the last 5 years, I have been studying computer crime as director of the National Center for Computer Crime Data, a clearinghouse for information and research. From that vantage, I see computer crime as a kind of useful, albeit evil, systems analysis. It quickly points out a computer system's weakest links.

## The Emperor's New Clothes

Neal Patrick recently testified before a congressional subcommittee on the topic of computer security. This 17-year-old, a member of a group calling itself the 414 gang, had used a personal computer, a modem, and a less-than-earthshaking level of computer expertise to gain access to more than 60 computer systems throughout the United States and Canada. His targets included Los Alamos Nuclear Research Center, Security Pacific Bank in Los Angeles, and the Sloan-Kettering Cancer Center in New York City.

His message to the subcommittee was that anybody could gain access to computers just as he had—it wasn't hard. Security

Jay Bloombecker

is often nonexistent, he told the assembled legislators. He pointed out the fact that users would not even spend the 30 seconds required to change a password, as their user manuals told them to do.

In a perverse way, we ended up grateful to this young man—he had demonstrated how naked our emperor was. We trusted those who manage our computer systems to keep them adequately protected, and it appears that some have abused our trust, including government and private agencies with files containing information about us, businesses that take their losses to computer crime out of our hides, and the military establishment, upon whose computer systems the very future of our planet depends.

We must look at the rash of computer crimes involving personal computers without paranoia or complacency and try to discern some of the more striking implications for personal computer owners who wonder how they may be affected by computer crime.

Recently, the father of a 16-year-old told me that his son would never become a file prowler. "I'd take the modem out of the house before I'd let that happen," he said. That's a hard choice, one of the many choices that parents will have to make when they bring computers into their homes. Unauthorized computer use demonstrates society's inability to communicate morality to its young. There is no conscience in computing; the field seems so new and so seductive that many adults seem happy to go on forever talking about what computers can do. There is seldom much discussion, however, about whether computers *should* do everything they can do.

## Computer Addicts

Addiction, a term that used to be reserved for physical dependencies on substances like heroin and alcohol, has been and virtually redefined. For many people, computer addiction is a negative term. For many so-called computer addicts, it is a label worn with pride.

The central difference between a nega-

# trillian<sup>TM</sup> VISUALL

Visual Shell for the IBM Personal Computer

## Complicated Commands Are History!

Trillian VisuALL creates a connection between you and your computer. It provides you with a library of visual windows allowing you to use all your software by seeing and pointing rather than remembering and typing. Now you can use your computer without having to read a manual! With VisuALL you only need to tell the computer what-to-do not how-to-do-it. The result is that you can concentrate on the work at hand instead of remembering complicated keyboard commands.

The VisuALL shell for PC DOS including the DOS Command windows and the VisuALL program for creating customized windows is available now for \$99.95. Additional VisuALL shells for popular software programs such as Lotus 1-2-3 and WordStar are available for \$49.95\* each.

You can get VisuALL at your local computer store and at many bookstores.

For information call 408-374-5001  
or write Trillian Computer Corporation.

\*VisuALL shells require VisuALL programs in order to operate.

CIRCLE 491 ON READER SERVICE CARD

# Next April 15th, you could be adding up your golf score instead of your taxes.

With your IBM PC and Best Programs' TaxCut™ program, you can use the long days and nights you used to put into preparing your taxes for something more enjoyable.

TaxCut includes two second-generation programs, one for tax preparation and the other for tax planning, pioneered and refined by tax and programming experts—and by PC users like you. With step-by-step, on-screen prompting, the tax-preparation program helps you prepare and print the 1040 long form and more than 30 other commonly used forms and schedules.

You don't have to know all the regulations. You don't have to figure out IRS instructions. If you need help, the on-screen prompter tells you exactly which page in the comprehensive reference manual

has the answer. You won't waste time answering questions more than once because the program automatically transfers information from one tax form to another.

TaxCut also includes a tax planner program that allows you to decide for yourself whether or not to set up an IRA, what effect a new mortgage will have on your tax liability, and the tax implications of a wide variety of other financial alternatives.

TaxCut is compatible with the IBM PC, the PC/XT and the COMPAQ computer. The program requires at least 128KB memory and one double-sided diskette drive. Add Best's Professional Finance Program (PC/PFPII), which tracks and computes data for input into TaxCut, and you have a complete financial and tax package.

You can have the whole, proven, second-generation tax-preparation and planning package for \$255.00. This price includes extensive customer support and a newsletter to keep you up-to-date. And both the cost of the program and the actual cost of doing your taxes with it are tax-deductible.

The TaxCut program is available for immediate delivery. Call us toll-free at 1-800-368-2405 for more information.

Next April 15th, you'll be very glad you did.

**BEST  
PROGRAMS**

*"The Quality Software Company"*

tive and positive addiction may be the addict's connection with external reality. Perhaps a positive addiction is one that brings us closer to other people, things, and experiences. Runners, meditators, Zen Buddhists, readers, and lovers may feel out of sorts or unfulfilled without their daily dose of the activity to which they are addicted. If they use their addictions to augment their feelings rather than obliterate them, perhaps positive addiction is the appropriate phrase. If so, the question of whether computer hacking is a negative or positive addiction is probably best addressed to those most responsible for the young hacker's development.

It's up to parent and child to determine whether computer use is a negative or positive addiction. The question is essentially one of humanity and values. If you let manufacturers determine the morality of your children, you shouldn't be surprised if their concerns are limited to getting and spending. Putting conscience into computing means adding moral sense into the equation, and parents can do this more compassionately than the FBI.

It is important to remember that not all computer criminals are kids. Nor are all computer criminals after information, or even after money found in obvious targets like banks or payrolls. Consider the case of the computer criminal who traveled from state to state selling computer peripherals at phenomenal prices. With no inventory to speak of, he could afford to offer bargains. He took people's money and ran. When last we checked, he was in jail on one such case and believed to be running another scheme from inside the prison. Consider, too, the chagrin at the Security and Exchange Commission when it learned that a computer demonstration involved a blinking machine that did nothing else.

Around the world, con men and women are developing new schemes based on no other knowledge of computers than that people have lots of funny ideas about them. People who believed that computers could do investment com-

putations and instantly produce windfall profits have been fleeced in schemes in Florida and Colorado to the tune of over \$50 million. In England, a similar scam involved several hundred thousand

## It is important to remember that not all computer criminals are kids.

pounds. In New York, over 500 people were conned by phony repairmen who waited at Citibank's automated teller machines and persuaded them to hand over their cards.

### Protect Your Assets

Both illegal access to computers and consumer computer fraud demonstrate crime's basic economic law. Criminals go where the money is—or, more properly, where the assets are. Computer users must protect their assets, or they may find themselves embarrassed and without recourse. A popular system like *dBase II* may be all you need to do a payroll, but it may also be an open invitation to a computer criminal. And with an ever-increasing proportion of the population engaged in information processing jobs, more and more people will be looking at every part of the system they work in, trying to see what is worth ripping off, from paper and blank diskettes to space and time. Another valuable commodity, of course, is information that, if changed, can make the criminal's performance look better, such as school grades or the new net worth of a company issuing new stock.

If you use a computer in business, you have concentrated and reorganized your assets, possibly creating, in the process, assets you never had before. It is essential to be aware of everything you stand to lose and how you can avoid losing it. The 414 gang showed what can be done to sophisticated systems. Entirely different problems and solutions apply to securing your

own personal computer, and you ignore them at your peril.

Computer crime is an environmental issue, and environmental issues seem to need bleeding bodies before anyone pays attention to them. It may be in the interest of a computer user *not* to increase security against computer crime. It may cost less to pay insurance and to make changes in existing security after a crime occurs. One reported case involved a bank that slowly became aware that someone was using a computer to steal \$5 from each account of a large number of bank depositors. The bank found it cheaper to pay the victims who complained of the loss than to make the criminal stop. If such a plan is more economical than preventive security, the chances are slight that the computer user will change the procedure—unless the public demands it. And up to now there have not been enough bleeding bodies to shock the public into demanding more moral use of computers.

In large part, this is because of the essentially peaceful uses of information processing to date. It is also because the links between computer processing and human consequences are often complex and hard to communicate. The difficulty of documenting computer abuses has kept us from gathering more information to support our position.

### Taking It Seriously

People who fear computers include those who have never used them and those who study or work with them full time. Slowly but discernibly, all these people are making their voices heard. There have been bombings of computer centers in Italy, England, France, and elsewhere. Far more reasonable groups in the United States have challenged the use of computers in military weaponry and nuclear arms. But the flashpoint has not been reached, and perhaps only with the prominence of Neal Patrick and the 414 gang have we even become aware of the possibility that the public, that amorphous beast, could take computer security seriously. ■

# PC PEACOCK™

## Brings Living Color to Your IBM PC™

Computing is dull in black and white. But it doesn't have to be.

PC PEACOCK brings the excitement of color to your IBM computer. Pictures, charts and graphs "come alive" in multicolor brilliance. PC PEACOCK works with all color and composite monochrome displays to produce crisp, detailed images.

You'll see your favorite programs in the splendor of color. PC PEACOCK is fully compatible with all software for your IBM PC — including the wide variety of graphics programs. The medium multicolor mode and high resolution monochrome mode enhance your display capabilities for business, home and education.

And PC PEACOCK is convenient. Its parallel port allows you to connect a printer to your computer without wasting an additional expansion slot. Connections for all displays (RGB, composite, monochrome and televisions) are included.

PC PEACOCK is designed to provide years of worry-free performance and is backed with an outstanding TWO YEAR warranty.

So bring living color to your IBM PC, with the PC PEACOCK Color Graphics Adapter. PC PEACOCK is available now at your local IBM dealer.

# Build a Time Machine

## Introducing the first hard disk multi-function system for the IBM PC

Now, you can add 10 or 15 megabytes of on-line hard disk storage to your IBM PC and get a serial port, a clock/calendar, and sockets for as much as 192k of additional system RAM. You get all the features of the IBM XT—and more—in only one expansion slot. It's all possible with Falcon Technology's new PC eXTender™ series hard disk systems.

## Falcon PC eXTender Systems Save Both Time and Space

A PC eXTender system will save you time two ways. First, with more on-line capacity than 45 floppy disks, you won't be changing disks continuously. Second, Tim Paterson, the author of the IBM PC's operating system and founder of Falcon Technology, has developed proprietary circuitry that can continuously transfer data at the maximum speed of the drive. The Falcon system is capable of reading one megabyte from the disk in three seconds. This is by far the fastest hard disk available for the PC.

The speed improvements you get with Falcon will turn your PC into a true time saving machine.

A PC eXTender system also saves you space. The disk controller and the added functions occupy only one expansion slot.

## Plated Media for High Data Density

Falcon's PC eXTender systems use thin-plated media which resist damage from contaminants and head crashes

better than the oxide-coated media used in other PC hard disk systems. In addition, the disk/head cavity is shock mounted to a cast aluminum frame.

## Stretch Your Capabilities, Not Your Budget

With a PC eXTender, you'll be able to process more data, faster, and at a lower cost than with an IBM XT.

Prices for Falcon PC eXTender systems start at \$2,295.00 for 10MB mounted within the IBM chassis. The 15MB drive is \$2,595.00. PC eXTender systems are also available in externally mounted cases. Systems can be configured with one or two Falcon drives.

For the serious PC user, a Falcon PC eXTender may well be the ultimate performance-enhancing add-on available.

To find out more about Falcon PC eXTender systems for your IBM, give us a call:

# THIS IS ALL IT TAKES TO RUN OUR HARD DISK.

**Compatibility.** A lot of manufacturers talk about it. Mostly, compatibility is defined as something that almost works like the original. Our hard disk subsystem for the IBM PC runs on 2.0 without modifications, patches or use of device drivers. Just boot 2.0 and run.

And we haven't cut back on reliability either. The Apparatus hard disk uses the Xebec controller and connects via a host interface module to one of the slots in your PC. The HIM also contains an RS-232 serial async port for use with a

mouse, modem, etc. Even with compatibility and reliability built in, we've managed to provide some very competitive pricing. The 10, 15 and 26 megabyte drives are priced at **\$2,295, \$2,695 and \$3,395** respectively.

When you use a multifunction RAM Card, such as the Apparatus Combo II (with up to 512K of RAM, RS232, parallel printer, clock calendar, and game adapter) along with the HIM, floppy disk controller and CRT monitor adapter cards in your PC, you still have one slot available for future expansion.

If you're considering a fixed disk for your IBM PC, look at all the systems available. Look for compatibility. Look for reliability. Look for value. We think you'll pick ours.

For more information or to order yours call **800/525-7674** or write Apparatus, Inc., 4401 S. Tamarac Parkway, Denver, CO 80237, 303/741-1778. Dealer inquiries invited.

# The Two Faces of PCjr

Like the Roman god Janus, IBM's newest computer stares in two directions: to the business and work environment of its big brother, the PC, and to the home setting.

When computer manufacturers like IBM work on new projects, they give them code names for working purposes. The code name for the original IBM PC reportedly was Chess. For the new IBM PCjr, IBM is said to have used a few code names, including Hercules, Pancake, Pigeon, and Sprite. Bringing out a new personal computer model calls for the help of outside companies, particularly software companies such as Sierra Online, which developed many of the first games for the new PCjr. To find out if any of these outside companies were leaking information, IBM gave each its own code name for the new computer.

I don't know what IBM's own internal code name for this wonderful new computer was, but I know what it should have been: Janus. Janus was the two-faced Roman god who stood guard over the new year with one face turned back to the old year and the other face turned forward to the new. To me, there isn't any better symbol of the meaning and significance of the PCjr than Janus.

## Code Name: Janus

The PCjr is a computer that looks in two directions. It has two strong aspects that allow it to peer with a steady gaze into two quite different realms. One face looks into the world of the IBM PC as we have known it. The other looks into the world of

Peter Norton

home computing, a world that has previously belonged to computer companies like Atari, Commodore, Mattel, Coleco, and Timex/Sinclair.

The "PC" face of the PCjr is thoroughly remarkable. When the PC first appeared, we all understood that it was a very powerful, capable, and versatile computer at what we thought was a modest price, between \$3,000 and \$5,000. When the XT appeared, extending the PC's capabilities for a price between \$5,000 and \$7,000, we were impressed by its cost-effectiveness too. At the time, the price/performance ratio of the PC and the XT seemed quite impressive. Yet the PCjr is priced at around \$1,000 to \$1,500 while giving us about 85 percent of the comput-

ing power of the PC and roughly the same proportion of its capability as well. That is completely remarkable.

(The reason the PCjr has less computing power than the PC is technically intricate: In the PC and XT, the display screen has its own dedicated memory, which can be read to refresh the display independent of the needs of the processor. The PCjr's display, however, shares the same memory used by the computer's processor, and refreshing the display image steals memory cycles. This causes the processor's use of the memory to take about 50 percent longer than it would otherwise, and the extra time needed to use the memory adds, on the average, about 15 percent to the overall running time of each instruction the computer carries out.)

The other face of the PCjr is equally impressive. Home computers have traditionally provided a strong ability to play games. In the areas of home finance, education, and home-style word processing, however, the capabilities of home computers have been sadly lacking. Analysts of the home computing world have reported that a high proportion of old-style home computers have ended up on a closet shelf, simply because they weren't really very interesting or useful after the novelty wore off. The IBM PCjr shouldn't suffer from this problem.

The PCjr brings an unprecedented

**The Office  
UNIX System**

UNISOURCE

# WE DRESSED IT UP. NOW YOU CAN TAKE IT ANYWHERE.

## Introducing *The Office UNIX®* System for the IBM PC.

We took the best implementation of AT&T's UNIX operating system designed especially for the IBM personal computer - *VENIX/86™*. Then we created an elegant but simple menu interface tool to make it more user friendly. And, finally, we selected top-notch applications for decision support, database management, electronic mail, word processing, and more. We call it *The Office UNIX System™*. It gives you the most advanced, interactive, multi-tasking, multi-user environment available on the IBM PC. Let us tell you more.

**Yes. It's a real UNIX.**

 **VENTURCOM**

*VENIX/86* is from VenturCom, the leading UNIX software development company, which pioneered UNIX for microcomputers. They tailored UNIX for the IBM PC to optimize memory usage, speed, and system reliability. The standard distribution includes: four editors, a C compiler, BASIC, an assembler, yacc and lex. Plus UNIX to UNIX system communications (UUCP and CU), document preparation (nroff), a spelling checker, a table formatter, a wide range of library routines, and more. VenturCom even remembered the UNIX aficionado by including the UC Berkeley enhancements vi, termcap, more and the c shell. Electronic mail, calendar and reminder functions are, of course, standard. The hard disk can be partitioned to permit both UNIX and PC-DOS files. So look no further: *VENIX/86* is a complete and faithful UNIX implementation.

### New for UNIX Users!

To make *The Office UNIX System* easy to use, add our new *Office Menu Tool™*. It allows you to choose from a set of prepared menus or you can make your own. Menus can be constructed

with multiple levels, each with their unique descriptions and help screens. That's not just user friendly, that's UNIX friendly!

### Do we have applications?

You bet! For word processing, add the highly acclaimed *The FinalWord™* from Mark of the Unicorn. *Viewcomp™* from Unicorp Software, gives you all the features you expect in an electronic

spreadsheet. Take care of database management needs with *Leverage™* from Urban Software. *Leverage* is menu driven, has substantial online help screens and can generate reports, mailing lists and letters. *FUSION™*, a product of Network Research Corp., lets you join the Ethernet™. Naturally, we'll continue to review and offer more applications and UNIX tools.

### Multi-user on the IBM PC.

Connect two display terminals to your IBM PC and have three users share the same PC, disks, and printer. This economical yet powerful multi-user system offers all the features, storage and convenience of a much larger system. Plus you get the benefits of IBM and UNIX.

Start building your Office UNIX System today by purchasing *VENIX/86*. Make it easy to use by adding the *Office Menu Tool*. Then buy the applications best suited to your needs. There's a lot to choose from!

Now that we've dressed it up, you can take UNIX and your IBM PC anywhere. Tied together, they're a natural!

*The Office UNIX System* is available for immediate delivery. Just give us a call or write to: Unisource Software Corp.

## THE BEST-KEPT SECRET IN SOFTWARE.

### JEWEL™ A NAME TO KNOW.

We've made our "secret" identity public knowledge, and now that the word JEWEL is out, you'll be hearing about some remarkable software for microcomputers.

### JEWEL ACCOUNTING SOFTWARE. FULLY INTEGRATED, FULLY INTERACTIVE.

Our systems are the most powerful, feature-packed accounting programs available for micros. They're superior to nationally-known companies' versions of programs adapted from larger hardware formats. Ours were written just for microcomputers.

General Ledger is automatically updated by data from A.R., A.P., Payroll, Job Costing, and Fixed Assets, and all can interface to electronic spreadsheets. All the systems interact as needed, i.e., Job Costing allows progress billings, Purchase Order updates inventory, etc.

In short, we have more performance, higher efficiency, and more management tools for business executives. Guided by veteran entrepreneurs, our program writers attack the economic problems of growing businesses. Now, after years of user success, our accounting systems will be available nationwide.

All our software systems are compatible with any MS-DOS version up to 2.0. JEWEL software will be available in multuser (Ethernet™ & other networking) as well as Xenix™ type formats.

A.R. • Inventory Control • Order Entry • A.P. • Payroll • G.L. Standard • G.L. Complete • Client Write-Up • Fixed Assets  
• Manufacturing • Job Costing • Medical Office Manager • Purchase Order • Client/Time Billing • Point of Sale

## NORTON CHRONICLES

amount of computing power and versatility into the home environment. Families that learn to make full use of the PCjr won't find it lacking in amazing abilities. It has enough computing power, graphic formats, and all-around flexibility to provide a dramatic improvement in home computing.

But the most important thing about the PCjr's homeward-looking face is its connection to the face that looks toward the established world of the PC and XT. IBM's home game computer and IBM's cheapest personal computer are the *same* computer. This means that the computer user who works at home can run nearly all of the most important and useful programs that have been written for the other IBM personal computers.

### The Volkswagen of PCs

Some practical factors need to be kept in mind when measuring the PCjr's abilities against the PC's. Consider this analogy: A pickup truck can haul around more stuff than a Volkswagen. But if a person's main objective in owning a vehicle is to bring the groceries home, then a Volkswagen would serve just as well as a pickup truck could. The new PCjr can be compared to that Volkswagen and the PC to the pickup truck. An XT would be comparable to a moving van.

The truth is that the work most of us give our computers doesn't begin to stretch their capacity. If the work that you do with your computer really calls for an XT, you'll probably think of the new PCjr as nothing more than a toy. On the other hand, if you own a PC and the programs you use can get by in 88K of user memory, then the PCjr would probably be almost as useful to you as a PC.

The PCjr does have limitations when compared to the PC and XT, and two stand out: It has only one disk drive and only 128K of total memory. Most PCs have two disk drives, and an awful lot of PCs have 256K or more memory. Yet most programs for the PC have been designed to work with only one disk drive

IBM's new PCjr can be used in the office and at home.

and only 64K. In the past, it may have seemed laughable that so many programs lived within these restrictions, but now we should be very grateful. Any program that followed a design guideline of 64K and one disk drive is likely to run beautifully on the PCjr.

This means that the PCjr will run most of the PC's programs very nicely. Most of the programs that can't run on the PCjr are programs you probably wouldn't think of trying on the PCjr anyway. If you really need a moving van, you wouldn't even think of driving a Volkswagen. If you're considering getting a PCjr, then a PCjr is probably enough computer for your needs.

Looking at things this way, the new

PCjr has all, or nearly all, the capacity and flexibility that most of us who are already using PCs need. For someone who is just starting out in personal computing with the IBM PCjr, things look even better. These new users can tailor their choices of programs and applications to fit the abilities of their computer.

All in all, the PCjr looks like a remarkable machine for its capabilities and an astounding one for its price. The micro-computer world has looked with amazement at the impact of the original PC on personal computing, it seems likely that the PCjr will make an even bigger splash, and that the waves from that splash will spread much further. There is great excitement ahead. Stay tuned. ■

Announcing A Major New Innovation From The Publishers Of 

# Now, Get Up To 72 Programs For As Little As \$2.00 Each.

**Introducing PC DISK MAGAZINE. The Only Magazine On Disk That Gives You A Library Of Software Programs For Your IBM Personal Computer ... At A Fraction Of The Price!**

Imagine building a library of software programs with amazing ease...adding utilities, subroutines, games and data files to your system...for as little as \$2 per program! Introducing PC DISK MAGAZINE—a totally new concept for your microcomputer that gives you all this and more! You get thoroughly tested, ready-to-run programs on a floppy disk—complete with a comprehensive, illustrated User Manual—for the ultimate in ease, efficiency and economy. With your subscription to PC DISK MAGAZINE you'll receive a floppy disk containing up to 12 varied ready-to-use programs and files. Developed by experts and tested by the editors, you'll be able to expand the use of your IBM personal computer.

**Business and Finance Aids:** Create advanced pie, bar and line chart graphics. Compute loan payment tables. Calculate the Present Value and Internal Rate of Return for your investments. VisiCalc™ templates for

Real Estate, Lease/Purchase and Tax Shelter analysis.

**Programming Tools:** Create cross-reference listings for your BASIC programs. Convert MBASIC™ program files to CBASIC™ format or reverse. Use your text editor on your BASIC programs. Convert data between BASIC and VISICALC® or Supercalc® formats.

**Home/Personal Applications:** Whether you need your own income tax return helper...proven ways to maintain a mailing list...a personal cash flow analyzer...a speed reading trainer...or SAT test preparation aids, you'll get it from PC DISK MAGAZINE.

**Utilities and Diagnostics:** Print graphics, screen images on your printer...backup, copy, delete, un-delete or type files with simple menu commands. Use your computer to simulate a conversational terminal with function key control of disk or printer logging...and more.

**Data Files:** Tax tables, population statistics, dictionaries and economic times series.

**Games:** Adventures! Strategies! Test your skills, intelligence and your luck!

## Everything Is Ready For You

PC DISK MAGAZINE has everything you need. The accompanying 60-page User Manual is written clearly, concisely, in easy-to-understand terms. You'll be able to try the programs immediately...there's no need to type listings into your computer. Just insert the disk and go! That simply, all the latest software developments are at your fingertips!

# AIR TRAX

**It's only a game . . .  
but you can hardly tell the difference!!**

Begin your training at Raleigh-Durham airport as a junior Air Traffic Controller. Your job is to direct incoming traffic, maintain proper air separation, administer take-off and landing, and monitor transiting planes at suitable headings and altitudes. Your successes will bring you salary increases and job advancement to larger, more difficult airports. The ultimate success, of course, is to reach and then master the world's busiest airport, O'Hare in Chicago.

AIR TRAX is a sophisticated, real-time simulation featuring professional user-friendly documentation, multiple runways, game hold, six game speeds, small craft, jumbo jets, super-

sonic transports, fuel constraints, and 25 airport traffic pattern combinations (both fixed and random) ranging from simple to impossible, including one you can design yourself.

To order AIR TRAX, call our toll-free number or send \$44.95 in the form of money order, certified check or cashiers check to: Control Concepts, P.O. Box 2367, Manassas, VA 22110. Make checks payable to 'Control Concepts.' Ordering by phone using VISA or Master Card, please have your credit card number and expiration date handy. Do not send cash. Control Concepts will pay for all shipping in the U.S.

CIRCLE 279 ON READER SERVICE CARD

# Introducing the First 2.5 Mb Minifloppy Drive.

Isn't it just like Rana Systems to introduce a floppy disk drive for the IBM® with the mass storage benefits of a hard disk, plus the floppy's strength of removable media. The first minifloppy that stores an incredible 2.5 megabytes on a single diskette. Imagine, storing a word processor, a spelling checker, mailing list, and dictionary on one floppy. With megabytes to spare.

Rana's new drive needs only 10 floppies to give you all the capacity of five 5-megabyte hard discs. But that's not the limit. In fact, there is no limit. Like any floppy with its removable media, you can use diskette after diskette to increase your storage. Our expanded capacity disk drive not only acts like a hard disk, it also serves as an ideal back-up for one.

And that's just the beginning, because Rana's drive introduces totally new "closed loop servo" minifloppy technology, making the drive insensitive to temperature or humidity. Rana's controller card can be used with standard internal drives also, so you don't have to

use an additional slot. Our drive comes with its own power supply, software enhancements for PC-DOS 2.0 and 1.1, and CP/M-86®, and a box of diskettes. Everything you'll need to make your IBM operate to its maximum potential.

The new 2.5 megabyte minifloppy drive, available first for the IBM® PC and XT and soon for the Apple®. It's Rana's latest proof that to stay a step ahead, you've got to lead the way.

# A Match Made To Win...

Introducing Thoroughbred™ Software  
on the IBM® PC/XT

At last! Business and system software for the IBM PC/XT designed for results. Thoroughbred Software from SMC Software Systems brings the power and speed of mainframe software to the XT.

What makes Thoroughbred unique? Completely integrated business applications enhanced by Thoroughbred IDOL®, the leader in application development software. Specialized applications are simplified by IDOL's powerful customization features. Complementing the Thoroughbred business software line are SMC's well known Business BASIC programming language and a new word processing package.

SMC answers the multi-user need with a fast and efficient operating system, Thoroughbred/OS, which can handle up to four users simultaneously. And, of course, Thoroughbred is offered under MS™-DOS.

Available on 30 additional microcomputers, Thoroughbred Software has a proven track record for success. So put Thoroughbred Software on your XT and let a winning team fulfill all your business computing needs.

Run with the best...

# IN THE BEGINNING THERE WERE SPREADSHEETS... NOW PROFIN™ GOES BEYOND.

If you're a very busy person wondering why it should take hours to set up the mathematical calculations for financial analysis on a microcomputer, the answer is it shouldn't.

If you think there should be some way to see income statements, interest schedules, capital expenditure reports, tax schedules, return on equity, discounted cashflow, and balance sheets without spending days laying out a spreadsheet, you're right — there should.

In fact, there is! It's Profin.™

## **MATCHING THE TOOL TO THE JOB.**

From now on, using a universal spreadsheet to do the highly specific work of financial analysis will be considered just fun for hobbyists.

But, if you're a business person with little computer experience and even less spare time, you can quickly and easily use Profin to figure forecasts and budgets, return on equity, discounted cashflows, net present values, capital expenditure, interest calculations, depreciation comparisons and taxation scheduling — with the reports laid out for you automatically.

## **FINANCIAL REPORTS IN MINUTES.**

Because Profin is menu-driven, you simply answer a series of questions. You can complete your analysis

in 30 minutes, or change prices, costs, inflation rates, interest rates, capital costs, and foreign exchange rates, then immediately see revised reports.

In the beginning, spreadsheets were great. At least, they were all we had. Now there's more, with the specialized tool for a specialized job: Profin.

Available under \$300 for CP/M-80, MS-DOS, and IBM PC-DOS from your local retailer or from most distributors.

Also available: Planfin.™ For sales, marketing and other executives who just want simple forecasts and budgets without detailed capital and loan analysis, Planfin gives you operating income statements plus net income and discounted cashflow reports in less than 15 minutes. Under \$200.

**BUSINESS™  
SOFTWARE**

☐ Please send me more information about how Profin and Planfin beat the spreadsheets for budgets and forecasts.

# Meet The New Members

This issue of PC Magazine explores the three latest additions to the IBM personal computer family: the XT-370 Workstation, the PCjr, and the 3270-PC.

**F**irst there was the PC. When IBM produced its personal computer, the machine stood far apart from the rest of Big Blue's activities. It was a kind of stepchild, not unloved but not entirely in step with the rest of IBM's computing clan. Apart from building and marketing the machine, IBM did little to find it a role in the computing world. The PC's character and many of its capabilities were provided by outside vendors rather than by the computer's corporate parent.

Then IBM introduced the XT. It was as if PC had suddenly acquired a tough older brother. The introduction of this more powerful version of the IBM personal

computer was an important manifestation of the company's belief that personal computers are serious machines with important business roles to fulfill. The PC-XT team could play a much larger role than the PC alone, and the addition of an "older brother" brought the PC closer to the family fold.

Now IBM has expanded the PC family even further with the introductions of the PCjr, the XT-370 workstation, and the 3270-PC. These new products represent the full integration of PC into the IBM scheme of things. No longer is the personal computer an odd offspring. Now, in fact, it appears as the heir apparent to the role of the IBM business workhorse

machine. And the new additions to the PC family extend the impact of IBM personal computing all the way from the rec room at home to the data processing room at major corporations and institutions.

If the PC by itself represented the standard by which microcomputers were judged over the last two years, the PC family will be the standard by which integrated computer systems will be judged from now on. IBM will no longer merely be selling a good micro machine; it will be marketing a system of micros with such variable and flexible capabilities and applications that the possibilities almost defy description.

The possible combinations are mind

From left: the IBM XT-370 workstation, the PCjr, and the 3270-PC.

boggling: PCs at home or on secretaries' desks, with PCs and XTs in executive offices, laboratories, and sales stations, and 3270s at branch offices, communications posts, and overseas outlets, plus 370 workstations at key points in the processing chain of command. An individual or company can now have machines of different characteristics and power in different situations, all richly compatible with one another and which can trade information up as the information grows more complex or shift it down into smaller, easier-to-use units. Customers, if they so desire, can arrange to purchase an entire family of computers that can be serviced by one person and that require one basic

set of training guidelines.

Beyond these straightforward commercial considerations, though, the new PC family is important because it is a first taste of the computing future. Today's individual, isolated, proprietary micros are destined to give way to networked machines that can speed information wherever it needs to go and can speak to one another and to other devices at different levels in the computing chain. The distinctions between micro, mini, and mainframe will continue to blur as machines become more flexible and powerful at all levels. Personal computing will shift from today's one-man, one-machine situation to a future in which the individual will be

able to work through many machines, depending upon the best way to solve each problem.

By spreading IBM personal computing across the broad face of individual and business situations, the PC family is leading the way into this age of enhanced communications and capability.

In short, these machines are transforming the way we use and think about personal computers even more than the PC did on its own. That is why we at *PC Magazine* felt that the new PC family deserved special coverage. Meet the new members of the IBM clan; you'll be reading about them and using them often in the weeks ahead.

# Screening The PCjr's Color, Video, And Memory Options

Offering a choice of colors and screen memory sizes, PCjr's video display screen is a rich and effective mixture of new and old technology.

The most remarkable thing about IBM's new personal computer, the PCjr, is how it manages to be both the same as and very different from its predecessors, the PC and XT. Nowhere in this remarkable new computer is this more strikingly apparent than in the video display screen. We'll take a quick tour through what is old and new in the PCjr's display screen and how the two are married so effectively.

The PCjr's display is rich and complicated with many parts to it. It offers new graphics modes, more flexible use of color, and an intriguing new way of using memory, which played a major part in keeping down the cost. PCjr's new circuitry differs from the PC's, and its new video modes have an effect on its computing power. Finally, there are all those video plugs on the back of the PCjr. We'll take a look at all these factors and explore what they do.

Let's begin where IBM began—doing its damndest to imitate the PC. PCjr is designed to act like a PC with the color graphics board installed. The original PC design had eight different video modes, one specifically for the monochrome adapter and the other seven for the color graphics adapter. Programmers familiar with the PC's built-in ROM BIOS service programs know the color graphics modes as video modes 0 through 6 and the monochrome mode as 7. A color graphics adapter could be put into any of the PC's seven modes using the BASIC statements shown in Figure 1.

Since the PCjr is designed to mimic an ordinary color graphics board PC as much as possible, all the original color graphics modes work as they originally did, as do the BASIC statements that control them. But in addition, there are three new graphics screen modes, with accompanying new BASIC statements to control them: SCREEN, COLOR, and PALETTE.

To the PCjr's innards, there are three new video modes, referred to as modes 8, 9, and 10, respectively. Each of these new modes extends the PCjr's graphics capa-

Mode	BASIC Statements	Description
0	SCREEN 0,0 : WIDTH 40	Text, 40 column, black and white
1	SCREEN 0,1 : WIDTH 40	Text, 40 column, color
2	SCREEN 0,0 : WIDTH 80	Text, 80 column, black and white
3	SCREEN 0,1 : WIDTH 80	Text, 80 column, color
4	SCREEN 1,1	Medium-resolution graphics, color
5	SCREEN 1,0	Medium-resolution graphics, black and white
6	SCREEN 2	High-resolution graphics, black and white
7	(The monochrome mode, not used by the color graphics adapter or the PCjr)	

Figure 1: the original eight color graphics modes in BASIC.

bility beyond what the PC's original color graphics board provided. Mode 8 gives us low-resolution graphics, with 160 dots, or pixels across the standard 200 lines that fill the screen from top to bottom. By contrast, the other two resolutions, which are not new, given us 320 pixels across for medium resolution, and 640 dot positions on each line for high resolution.

### A Choice of Colors

In the new low-resolution mode 8, all of the PCjr's 16 color options can be used at once. In the original PC, only four colors could be used at a time in the graphics modes, and we couldn't even choose our own four. But now, with low-resolution mode 8, we have a free and complete choice of colors, as well as a new resolution.

You might be wondering why it is useful to have a new lower-resolution mode for creating graphics. The point isn't simply to extend the amount of color we can use, as we'll see in a moment. The real reason is to make graphics work better with TV sets. TV sets have a fairly poor picture-making resolution compared with computer monitors. They are not very good at handling pictures made up of 80 columns of text nor those that use either medium or high graphics resolution; it's for TV sets, in fact, that IBM personal computers originally were equipped with the 40 column display mode. With the higher-priced PC and XT models, TV sets were seldom used for computer display screens—after all, anyone who could

afford a PC or XT could probably afford a proper monitor. But now, with the low-priced PCjr, TV sets will be widely used—that's why a low-resolution graphics mode is so important.

Two other new modes, 9 and 10, add more color to the existing medium and high resolutions. Mode 9 is 320-by-200-pixel medium resolution, but with full use of 16 colors, whereas the old medium-resolution mode 4 used only four. Mode 10, 640-by-200-pixel high resolution, selects four colors in a palette from the full complement of 16, whereas the old high-resolution mode gave us only two colors (black and white).

We have been describing these three new graphics modes in terms of their internal ROM BIOS video mode numbers. In BASIC, they are controlled by the SCREEN statement's mode parameter. Those who have dug into PC have learned that the computer looks a little different from the perspective of BASIC, and this is also true for these new video modes. In the BASIC SCREEN statement, there are four new modes, numbered 3 through 6. SCREEN 3 mode is the new low resolution (video mode 8); SCREEN 5 mode provides the new medium resolution with more color (video mode 9); SCREEN 6 corresponds to the new high resolution with more color (video mode 10). SCREEN 4, which we skipped over, is something of an oddity—it's the old four-color, medium resolution, which we always had with SCREEN 1, but the color is controlled a bit differently.

Color, in fact, figures in the PCjr in ways that are quite new. For one thing, the PCjr has more colors than the PC. As we've seen, there are now 16 instead of four in medium resolution mode and four instead of two in high. In addition, we can now select which colors to have at our command when we are using a 4-color mode. In the original circuitry, the colors in the PC's palettes were mostly fixed; we could choose one of the four colors used in the palettes, but the other three were pre-selected for us. The new color graphics circuitry, on the contrary, is completely flexible: We can load any color selection that we want to into the palettes.

### Arranging the Palette

To control the new color possibilities, PALETTE and PALETTE USING statements and an extended COLOR statement were added to BASIC. The function of the PALETTE statements goes beyond defining which colors will be available in the four-color modes. In the 16-color modes, the PALETTE statements can be used to rearrange the colors, so that when a program asks for color 1 (which is normally blue) it might actually get color 4 (red), and so on. Changing PALETTE can instantly change the colors on the screen or make things appear and disappear. In fact the new color tricks are so extensive and interesting that they could use a whole article to themselves just to cover the basics of what we can now do with color.

As we hinted before, the PCjr differs from other IBM personal computers in the way it uses memory to support the display screen. All IBM personal computers have what is called a memory-mapped display, which means that what appears on the screen is stored in the computer's memory. The central processing unit doesn't "write" information onto the screen, it changes what is stored in memory. Meanwhile, the computer's display circuitry continually reads whatever information is stored in memory, and converts it into the signals needed for the screen.

In the PC, there is a special kind of

memory dedicated to the display screen's memory mapping. What makes it special? First, it is dual-ported, which means that the display circuitry and the computer's processor each has its own independent

**The new color tricks are so extensive and interesting that they could use a whole article to themselves.**

access port to the memory, so that they will not get in each other's way; both the display and the processor can be working with the dual-ported memory at the same time, without either one slowing the other down. This arrangement works very well for memory-mapped displays but is more expensive than ordinary memory. To help hold down the cost of the PCjr, its display memory is *not* dual ported. To keep the display and the processor from butting heads, the memory circuitry for the PCjr gives a certain proportion of memory access cycles to the display screen, letting the processor use the remaining cycles when it needs them. The net result is that it takes the PCjr's programs six clock cycles each time it uses the memory, whereas the PC and XT do the same work in four. This shared use of memory cycles slows down the PCjr only when it is using the memory. The PCjr runs more slowly than the PC, primarily because of the extra time needed to use its memory. This is a small price to pay, however, particularly since most programs don't use much of the computer's power anyway. In many circumstances, the slower running time of the PCjr will not be noticeable.

Display memory in the more expensive IBM personal computers is unique for a second reason: its location in the computer's address space. The memory addresses, or address space, of IBM personal

computers have a range of 1 million bytes. About two thirds of this space is set aside for our programs to use; the rest is held off for certain dedicated uses, one of which is providing a fixed location for the display memory. For those familiar with hexadecimal memory addressing, the monochrome adapter places its display memory at segment B000, and the color graphics adapter places its display memory at B800, both toward the high end. In keeping with its remarkable nature, the PCjr sets up its display memory in a way that is both completely different and yet also functionally the same as the PC.

How can we explain this apparent contradiction? To start with, the PCjr doesn't use any special memory at all—the ordinary, general-purpose RAM that is used for programs is also used for the information that appears on the display screen (which is partly why the PCjr's display memory can't be dual ported). Next, to provide memory for the display, a portion of the PCjr's memory (64 or 128K) is set aside for the display screen. Usually 16K is set aside, which is the same amount that the original color graphics adapter had. However, the amount of memory set aside can be adjusted. However much memory is given to the display, it is at the top of the computer's 64K or 128K, and the rest of the memory is used in the ordinary way. If a PCjr with 128K of total memory has the display set to use 16K—the normal amount—then 112K is left over. In this case, the computer will act like a PC with 112K memory.

In the PC, the display memory is located at one of two fixed locations, depending upon whether a monochrome or color graphics adapter is used. Many programs have been written that make use of this fact by placing their output directly into the computer's display memory. When IBM was designing the PCjr, it knew that the actual display memory would not be located at the traditional places, but elsewhere, (and at a moveable "elsewhere" at that), since the actual location of the PCjr's display memory

changes depending upon how much memory there is and how much is given to the display. This creates a real problem for all those programs that try to use the display memory directly—they will be looking at the wrong location when they're run on a PCjr.

IBM's ingenious solution to this problem is a piece of circuitry known as a video gate array or VGA. The VGA is a sort of programmable supervisor of the use of memory. It is told when the PCjr's actual display memory location is set. As programs run on the PCjr, the VGA constantly checks any references to the traditional location of the color graphics display memory, located at hex segment B800. If the VGA finds that a program, any program, is trying to use the PC's display memory locations, the VGA invisibly reroutes things to the PCjr's true display memory. By this sleight of hand, the VGA makes the PCjr act as if it were an ordinary PC with the color graphics adapter. Even though there is no memory on the PCjr board actually located at B800, part of the PCjr's regular memory is treated as though it had been moved to that location.

### Adjusting the Amount of Memory

As we've mentioned, the amount of memory used by the PCjr's display screen can be adjusted. This statement calls for some explanation. Depending upon what display mode the computer is in, different amounts of memory are needed to store the information that appears on the screen. In the original color graphics modes, this could be as much as 16K, or as little as 2K for the 40-column text modes. Accordingly, the original color graphics adapter board was built with exactly 16K of display memory on it. When the computer was in a graphics mode that needed 16K, the screen used the entire display memory. In any of the text modes, which used less than 16K, part of the memory was used for the information currently shown on the screen, and the rest was set aside for off-

screen images, called pages. BASIC gave us control over these display pages with the visual-page and active-page parameters of the SCREEN statement.

PCjr takes this fundamental idea and

**The innovation  
means that we can  
connect a TV set to  
our PCjr with an  
ordinary audio jack  
connector.**

develops it further. First, its display memory, carved out of ordinary main memory, is adjustable from a low of 2K to a high of 32K (which is required for using either of the new medium- and high-resolution modes because of their extra colors). Naturally, because the PCjr is set up to mimic the PC, the default for the display memory size is 16K, the same as the PC's. But PCjr can change the size of the display memory: expand it for more pages or for the new modes, or diminish it to recover working memory space. It's particularly useful to reduce the size of the display memory, since few programs make use of multiple display pages and the PCjr has less memory than members of the PC community are accustomed to using. If, for example, we're running a 128K PCjr with DOS 2.10 with the display memory set at the default value, our programs have 88K to themselves—a good-sized amount but not huge by PC standards. If we cut the display memory down to a reasonable minimum of 4K, then our programs have 100K to work with, over 13 percent more.

The final novelty in PCjr's video display magic is the number of plugs on the back of the system unit. There are no fewer than three different built-in video outputs. As expected, PCjr gives us exactly what a color-board PC would give us—a composite video outlet and an RGB outlet.

The RGB outlet is designed to connect to a computer-quality RGB monitor, providing it with separate signals for the three components of display color, red, green and blue (R, G, and B). The composite outlet is designed to connect to what is called a composite monitor, of which there are two kinds. A color composite monitor will produce all the colors that the IBM PC generates, just like a high-quality RGB monitor; the only difference being that the picture quality may not be as good as that of an RGB. A monochrome composite monitor will produce a picture similar to IBM's monochrome monitor (which can't be used with the color board, or with the new PCjr) and may produce a green, amber, or white display image. Many PC users have found what PCjr users will discover—that this kind of display screen is one of the cheapest available and one of the easiest to read when you are working with written text for programming or word processing.

RGB and composite outlets are fine for connecting our computers to special computer monitors, but these outlets can't be directly connected to an ordinary TV set. In the old days, we needed another piece of equipment, called an RF modulator, to convert the computer's composite signal into a TV-style signal. The PCjr has a third video outlet that provides a signal our TV sets can use directly, thanks to an RF modulator built right into the PCjr's system unit. The innovation means that we can connect a TV set to our PCjr with an ordinary audio jack connector. This direct TB signal provides one extra benefit previously unavailable on the other models of the IBM personal computer. When we use the TV outlet, the sounds generated by the PCjr are included with the picture image, so that our TV sets can produce both sound and picture together.

This article is just a quick run-through of what is new and exciting about the PCjr's video display. It only begins to sketch out the main points, and there is much more to learn about the amazing details inside the PC's younger sibling. ■

# Cartridge Magic: PCjr's New Memory

The PCjr's two cartridge slots fit neatly into the memory design of the IBM personal computer family.

**O**f everything that's new in the IBM PCjr, one of the most innovative is the software cartridge. In this article, we'll take a look at how the new cartridges of the PCjr work and how they fit into the overall design of IBM personal computers.

A computer's memory can be compared to a playing field where the championship teams of computer instructions we call programs perform athletic feats. Plugging a software cartridge into the computer is like putting a team onto the

playing field—it's an instant way to add excitement to the sport of computing.

To appreciate the magic of software cartridges, we must understand some key things about how IBM Personal Computers use their memory, since software cartridges are a part of that memory. IBM Personal Computers, actually have two different kinds of memory. Random Access Memory (RAM) is used by the computer to hold the programs and data that it is currently working with. This kind of memory doesn't have any permanent

use; it's just the playing field where different teams, or programs, can play. When the program teams are done, they leave the RAM playing field free for the next team. When we talk about our computers having 64K or 128K of memory, we're talking about how much RAM it has, measured roughly in thousands of bytes.

## Understanding RAM and ROM

Anything can be stored in RAM for as long as it is needed. This information can be inspected (or read out of memory) and

changed, or written into memory. For this reason, RAM is sometimes called read/write memory. When a new program begins working, it overwrites whatever was left behind by the last program; when the computer is turned off, everything that was stored in RAM is then erased.

Computers also use ROM, which is permanently recorded with programs and data, so it is able to provide us with programs that are always ready to be used and which can't be accidentally erased or lost the way that programs on diskette can be. Giving a computer programs recorded on ROM is like building a locker room next to the playing field. ROM doesn't increase the size of RAM's general playing field, but it adds extra facilities that can enrich the use of the computer.

Each IBM Personal Computer, whether it's a PC, an XT or a PCjr, has two distinct sets of ROM programs built into them: one is the cassette BASIC, which we see in action when we turn on our computers without a diskette, and the other is a

PCjr's two program cartridge slots.

set of fundamental control programs, called the ROM-BIOS, which assist the operation of the computer. These ROM programs are permanently recorded on memory chips, which are permanently installed in the computer.

The program cartridges that the new PCjr can use add an extra degree of flex-

ibility to ROM programs. The PCjr's program cartridges are permanently recorded, so users don't have to worry about erasing or damaging them. But because they aren't permanently installed, they can be switched around; one cartridge can be plugged in for one use and another cartridge for a different use.

A cartridge plugs pre-recorded memory into the PCjr's memory space. To understand how that works, here's a short tutorial on how the memory is organized.

Use of memory in the IBM personal computers is based on the architectural design of the Intel 8088 microprocessor. Every computer has what is called an address space, which is the definition of all of the memory that it could have. The specific memory that the computer actually has is located within that address space. IBM Personal Computers, and all computers which use the Intel 8088 chip, have an address space of slightly over 1 million bytes—1,048,576 bytes, to be exact, or 1,024 kilobytes.

### Memory Architecture

When IBM designed the PC family of computers, it had to make some basic decisions about how that memory capacity would be used. In broad terms, two thirds of the address space is dedicated to general use by RAM memory; the other third is set aside for special uses such as the PCjr's new software cartridges. To understand them in more detail and to see exactly how the software cartridges fit into the scheme of things, let's take a look at the working boundaries of the memory.

The entire 1,024K memory space of our computers doesn't have any real boundaries or divisions and every part of it can be used uniformly. But just as yard lines are drawn on a football field to mark off locations, so the computer's memory is divided into 16 blocks of 64K each. This division into 64K blocks helps us talk about different parts of the address space, and it helps show some of the structure that IBM designed into their use of the computer's memory. We can identify

### Block Number

### Use

0	Ordinary RAM for our programs and data
1	Ordinary RAM for our programs and data
2	Ordinary RAM for our programs and data
3	Ordinary RAM for our programs and data
4	Ordinary RAM for our programs and data = 640 K total
5	Ordinary RAM for our programs and data
6	Ordinary RAM for our programs and data
7	Ordinary RAM for our programs and data
8	Ordinary RAM for our programs and data
9	Ordinary RAM for our programs and data
A	Reserved (mysterious)
B	Display memory, monochrome and color graphics
C	Fixed disk and mysterious reserved
D	for use by 2nd cartridge slot
E	for use by 1st cartridge slot
F	ROM - BASIC and BIOS

Figure 1: The 16 memory blocks in an IBM PC, XT, and PCjr, and their functions.

each of these 16 blocks of 64K each by the first hexadecimal digit of their addresses, and we can refer to them as 0 through 9 and A through F.

Figure 1 shows an outline of all 16 blocks of memory. The first ten blocks together, a total of 640K, are set aside for ordinary RAM. This is almost two-thirds of the total space. The A-block that follows the RAM area is set aside for some future use. The B-block is used for the memory that the monochrome and colorgraphics adapters need. The two original PC display adapters combined use only 20K of the 64K in the B-block; the rest of the space in this block could be used for expanded display modes.

The C-block of memory is partly used by the BIOS control programs for IBM's 10-megabyte fixed disk used in the XT. This BIOS program is stored in ROM. Curiously, this small amount of BIOS programming is placed right in the middle of the 64K C-block, dividing it neatly into half.

The main ROM programs for all of the IBM Personal Computers are located in the F-block, at the high end of the computer's address space. Both the cassette ROM-BASIC and the ROM-BIOS are located in this block.

### One Mystery Solved

Before the introduction of the PCjr, both the D- and E-blocks of 64K memory were reserved for unspecified purposes. Now we know that they were set aside for use by the PCjr's software cartridges. Before the introduction of the PCjr, both the D and E-block of 64K of memory were reserved for unknown purposes. Now, though, we know that they were set aside for use by the PCjr's software cartridges. Each cartridge could use any of the memory space in this 128K area. The electronic coding in the cartridge determines exactly where in memory the cartridge's data will appear. For example, the BASIC cartridge places itself at the paragraph address E800, or exactly in the middle of the E-block of memory. This leaves the remain-

ing 96K (all of the D-block and the other half of the E-block) for any other use. By convention, single cartridges plug themselves into the E-block of memory. Second cartridges (such as a BASIC program cartridge, which works with the BASIC language cartridge), normally use the D-block. If a program wants to look for cartridges all it has to do is to search through this 128K area of memory, to see what is there.

The information stored in a cartridge simply appears or disappears from the computer's address space whenever the cartridge is plugged in or removed. A sensor switch causes the computer to reboot when we plug a cartridge in, just as if we had pressed Ctrl-Alt-Del. This allows the computer to respond to the cartridge. In

Before the introduction of the PCjr, both the D- and E-blocks were reserved for unspecified purposes.

the booting process for the PCjr, the memory locations set aside for the cartridges are checked and allowed to indicate that they want to take control when the computer begins.

Cartridges can contain anything that anyone might want to put on them, from exotic programs to ready-to-use data. In practice, though, they are intended for only a handful of things. One is standalone programs, usually games, that can be run without any use of the computer's disk drive. These are the cartridge equivalents of the self-loading diskette programs used without the help of DOS or any other operating system. Normally these cartridge programs would be plugged into the first

slot; if a program is too big to fit into 64K—which is unlikely—it could have a companion cartridge for the second slot.

The second kind of cartridge is designed to work as a supplement to DOS. When DOS is running and given a command—for example, DIR or FORMAT—DOS first looks for the command program inside itself, checking for internal commands such as DIR. If the command isn't found internally, DOS looks to the disk for the external commands, like FORMAT. However, between looking to the internal command table and the external disk, DOS also checks to see if the command is on a cartridge. If so, then DOS carries it out with the program on the cartridge. The most obvious example of this kind of DOS program cartridge is the BASIC cartridge. When we have DOS running with the BASIC cartridge plugged in, and we give DOS the command BASIC or BASICA, DOS will run the version of BASIC that is stored in the cartridge.

### The Second Slot

The third kind of cartridge is plugged into the second slot, with the BASIC cartridge in the first slot. Stored on these cartridges are BASIC programs that need to have BASIC running at the same time. The BASIC cartridge is designed to check the second cartridge memory block and run any BASIC program it finds there. This makes it possible to have game cartridges with programs that are written in BASIC.

Each cartridge is supposed to have a standard signature, which is 2 bytes coded in hexadecimal 55 and AA. This signature appears at the beginning of each cartridge on the extra ROM-BIOS code for the IBM fixed disk—oddly enough, at the end, not the beginning, of each diskette's boot record. Although the cartridges plug into two specific addresses, at the beginning of memory blocks D and F, DOS and other parts of the computer's system programming actually check at every 2K memory boundary for this special signature.

Figure 2 gives a short BASIC program that will search all of the computer's address space for these signatures. If you have a regular PC, this program will find nothing except for the fixed disk BIOS at location C800, if you have it. But on a PCjr, this search program will detect any cartridges that are plugged in.

The hex 55 AA signature shows that there is a cartridge present but doesn't tell anything about its contents. We find out about the contents from some special coded information that follows the cartridge's signature. The next byte, the third byte of the cartridge's memory, gives the size of the cartridge's ROM, in units of 512 bytes. This scheme allows for a size up to 128K. A single 128K cartridge theoretically could fill the space allotted to both cartridge slots.

### Self-Starters

Following the length byte is a single machine language instruction, a 3-byte-long jump, which is intended to let the cartridge perform any start-up work that it wants to do. In the design of the IBM personal computers, interrupt 18 activates the computer's built-in cassette ROM-BASIC. When the computer is started or reset without a disk ready, the start-up programs perform an interrupt 18 to turn control over to the ROM-BASIC. This was the original scheme, in any case. Now, to accommodate self-starting cartridges, the PCjr's start-up routines allow a cartridge to change the controlling vector for interrupt 18 to point to some part of the cartridge's programs. This way, the computer is given a standard place to look for the beginning of a cartridge program, while the cartridge can then jump to wherever the actual working program is located. This is part of the scheme that makes self-starting cartridges work, and it's also part of what makes it possible for the BASIC cartridge to work both as a self-starting program and as a program that can work under PC-DOS. Three bytes have been set aside on the beginning of a cartridge to let the cartridge participate in the computer's

start-up activity.

Following the 6 bytes at the beginning of each cartridge, there is a table that DOS uses to identify the command programs on a cartridge. There is one entry in the list for each command program that DOS can use; the end of the list is indicated by a 0 byte after the last entry. Each entry in the list has three parts: a single byte that indicates the length of the name of the command, the command's name, and a 3-byte-long jump instruction that is used to activate the program.

Even cartridges that don't have any DOS command programs on them will have an abbreviated version of this command table, just to let DOS know that there aren't any commands on those cartridges. An empty command table consists of just a single 0 byte, the byte that is used to mark the end of the table.

The BASIC cartridge reveals what DOS command lists are like. There are two entries in the table on this cartridge, for the two commands BASIC and BASICA. BASIC and BASICA, of course, are the names of the two versions of BASIC that the original PC-DOS had. In PC-DOS, these are actually two distinct versions of BASIC, but on the cartridge

there is only one program that provides all the features of BASIC. To keep completely compatible with the PC, the BASIC cartridge provides both names, even though they both use the same program.

### Acting Dumb

There is a third program on the BASIC cartridge, known as TERM, which allows the PCjr to act like a "dumb" ASCII terminal. This TERM program, however, isn't included in the cartridge's table of contents as a third entry after BASIC and BASICA. Instead, TERM is activated through BASIC as a command, even though it isn't really a part of the language.

A complete PCjr with this TERM program on the BASIC cartridge costs less than many ASCII terminals. We may see lots of PCjrs sold to mainframe computer users just to serve as ASCII terminals; to these people, the PCjr's computing ability is just a benefit. We've heard that IBM didn't plan to offer this program; it was a last minute idea that Microsoft thought up when it found out that there was enough room left over in the BASIC cartridge. Ironically, this one feature may end up selling lots, and lots of PCjrs. ■

# Sound Abilities: The PCjr

The PCjr has distinguished sound-making skills that will enhance the noises in game programs. Norton believes that these capabilities reflect IBM's intentions for its new machine.

**T**he new IBM PCjr incorporates many new features, but at the same time it closely matches the abilities of the PC. The most dramatic improvement over the PC is its ability to create music and sounds. We'll take a look at PCjr's remarkable new sound features and investigate both the technical details and the practical aspects of using them.

## A Game Machine

Let me raise a question before we get started. If one of the main design goals for

the PCjr was to make it thoroughly compatible with the PC and the XT, why did IBM add new features that would set the PCjr apart? Why give the new machine abilities that the PC doesn't have? The answer is games. Think about this question and the answer. It is significant to the growing community of PC users because it tells us a great deal about IBM's plans for its personal computers.

I have no doubt that IBM is serious about program compatibility among all the models of the growing PC family. How-

ever, it is evident that IBM is introducing a degree of what we might call "functional product differentiation." The company is producing various models of personal computers, which are different from one another not just in price and overall capability, but also according to the type of use. The PCjr is clearly targeted at home users, which means that games will become one of its largest applications. The PC is a most capable computer. It has always been able to play games well, but it lacks some of the features that the most

popular game computers have. Among them are two video features—additional colors and “sprites,” which are parts of the screen picture that can be moved around quickly through hardware rather than software control. In addition, it lacked rich sounds. But, with the PC's high computing power, there isn't as much need for sprite hardware. The new video features enable the PCjr to make better use of color, though, in fact, it has more basic colors than the PC. One area where the PC falls completely short is in its capacity for sound variation, which is insufficient for most games. The PCjr, however, has distinguished sound-making skills.

But what about compatibility? Do the PCjr's sound capabilities sabotage the need for program compatibility among all the IBM Personal Computer models? Of course the PC and XT can't utilize the sound and video features programmed into a PCjr game, unless they are equipped with the necessary add-ons. However, most of the PCjr's new features, particularly the ones for sound, are oriented toward games, but, for the most part, XT users are not heavy game players. Worrying that certain game programs can't be run on an XT is like fretting because we can't put the XT's 10-megabyte fixed disk on our PCjrs. Some people may want to, but doing so is contrary to the very nature of each computer.

Entertainment and educational software programs need extra sound capability because we interact with them in a way that is more complex than interacting with word processors and spreadsheets. Games generate action sounds from chest pounding gorillas to exploding bombs. These programs play music in chords, sounding more than one note at a time, and, with the PCjr's new sound hardware, all of this is possible.

### Technicalities

Now let's get down to the technical details. The PCjr retains all the PC's sound-making abilities, and adds some

entirely new ones. While the new features for the display screen are natural extensions of the PC's abilities in this area, the sound-making abilities are accomplished through an entirely new means.

The sounds we hear are actually waves of pressure in the air. The frequency at which they oscillate determines the pitch of the sound, and the strength of the waves determines the volume. A computer creates sounds by generating electrical pulses at the correct frequency and strength to

## The PCjr retains all the PC's sound-making abilities and adds some entirely new ones.

enable a speaker to produce the sound desired. In the PC's sound-producing scheme, the computer's clock pulse and a programmable counter were combined to generate the required frequency. Here is how it works.

Both old and new sound in the PCjr begin with a frequency of 1,193,180 cycles per second, or 1.19 Mhz (million cycles per second). For the PC's sounds, this frequency is fed into a programmable counter, known to electronics designers as an 8253-5 timer chip. Our programs, written in BASIC or any other programming language, “program” the 8253 timer chip by passing it a counting number—let's say the number 2280. The 8253 timer counts the 1.19-Mhz signals being fed into it, until they reach the count value. Then the 8253 sends out a single pulse and begins counting again. In effect, the 8253 chip divides the 1.19-Mhz signal by the count that it has been given. So, if we give the 8253 chip a count of 2280, it divides the 1.19-Mhz signal into 523 cycles per second, which is the pitch of the musical note middle C. After it is amplified to the right voltage level, the 8253 chip passes the signal onto the computer's built-in speaker.

When this signal is passed to the speaker, it produces a sound with the same frequency as 1.19 million divided by the number given to programmable counter. Nearly any sound frequency can be produced this way, within the limits of arithmetic. A divisor of 60 would give a frequency of 19,886 cycles per second, while a divisor of 59 would give a frequency of 20,223. But, we couldn't achieve any frequency in between (say, by dividing by 59.5). However, in practice, this isn't a limitation; we can produce nearly any frequency that human ears can hear.

While this scheme can produce a pure musical tone at nearly any pitch, it has quite a few limitations. For one thing, only one sound can be produced at a time. Furthermore, it doesn't provide any control over volume, and it produces only pure musical pitches, not the kind of noises needed for rocket liftoffs and bomb explosions.

### PCjr's Four Voices

The PCjr overcomes these limitations. While it follows the same basic approach, it adds the power of a circuit chip: the Texas Instruments SN76489A sound generator (henceforth TI). The TI sound generator provides the PCjr with many additional features. It can produce four different sounds simultaneously with what we call “four voices.” Three of the four voices produce pure tones, like the PC, while the fourth produces noise sounds. Each of the four voices has its own independent volume control, which is called “attenuation.” And finally, the noise voice can produce two quite different types of sounds.

Here's how PCjr's four voices work. Each of the three ordinary voices of the TI sound generator accepts a number, which controls the frequency of the sound that is generated. The sound generator starts out with the computer's 1.19-Mhz frequency, divides it by 32, and then divides it again with the controlling count that a program has assigned to any of the three voices, which results in the sound frequency that

the voice will produce. For example, if we gave a controlling count of 100, the frequency produced would be 1,193,180 divided by 32 and divided again by our 100 count, giving us a pitch of 373 cycles per second, roughly a G flat note.

Each voice takes its own count and produces its own sound frequency. The controlling counts are binary numbers 10 bits long, so they can range from 1 up to 1,023. This provides a range of sound frequencies from a high of 37,287 cycles (with a divisor count of 1) to a low of 36 cycles (with a divisor of 1,023), which is roughly the range that the human ear can hear.

While the TI sound generator's three ordinary voices produce pure tones following the arithmetic we've outlined, the fourth noise voice works entirely differently. It produces a scrambled pattern of electrical pulses, using what is called a shift register with an XOR feedback network to produce an irregular series of electrical pulses, which we hear as a noise sound. The noise voice can produce an even pattern, which we'll hear as a pure "white" noise, or a periodically varying pattern, which causes a more ragged sound. Each noise pattern has particular uses in game programs. The noise voice needs a base frequency from which to build its scrambled sound pattern, but, unlike the other three voices, this voice doesn't have its own full range of frequencies. Instead, we are given four choices—either use one of three fixed frequencies or borrow the frequency being generated by the third of the three pure tone voices. The three fixed frequencies are 2,330 cycles (a high-pitched even hissing sound), 1,165 cycles (a medium hiss), and 582 cycles (a lower, rougher hiss). If we don't need all three of the other voices for pure tones, then we can base our noise on any frequency we choose, which greatly extends the range of noises that we can produce.

#### Volume Control

Each of the four voices in the TI sound generator has its own independent volume

control, known as attenuation. While the noise voice doesn't have its own full frequency range, it does have its own separate volume range, just as the other three voices do. The volume is controlled by four attenuation bits, each of which reduces the level of the sound by a fixed proportion, measured in decibels (dB). Each successive bit deadens the sound by about half as much as the bit before, so that the bits can be combined to produce a fairly even range of sound levels. The bits are referred to in the TI generator as A0 through A3, and here is the measurement in decibels of how much each of them reduces the sound level:

- A0 2 dB (least attenuation)
- A1 4 dB
- A2 7 dB
- A3 15.5 dB (most attenuation)

By combining the bits, we can achieve different levels of attenuation; for example, if A1 and A2 were set, the sound would be attenuated 4 dB plus 7 dB, for a total of 11 dB. If all four bits were set, the sound would shut off completely. With four bits, there are 16 combinations, giving 15 dis-

The noise voice can produce a periodically varying pattern, which causes a more ragged sound.

tinct sound levels, and no sound at all.

So far we've discussed the two ways that the PCjr can create sounds—from the original clock-counter combination and from the new TI sound chip. The PCjr is also capable of using these sounds in two ways. The PC and XT can use only the frequencies they create to produce actual sounds on the speaker built into the computer's system unit. The PCjr has this internal speaker, too, but, in addition, it

can pass its sound signals to other electronic equipment. Among the many plug sockets on the back of the PCjr's system unit are two that can be used for sound.

One is an ordinary audio jack, which can be connected to a hi-fi set. Plugging it into a hi-fi results in a high-quality reproduction of the sound signals created by PCjr. As you probably know, the speaker built into PC and XT isn't designed for high fidelity—it was designed to produce sounds crudely and inexpensively. But now, with the PCjr, we can pass the computer's sound signals on to a decent sound system to achieve top-quality sound.

The other destination for the PCjr's sound signal is the video TV outlet on the back of the PCjr's system unit. This outlet is designed to connect directly to a TV set, and it provides the computers display image, already converted into the format needed by a TV set. This TV outlet is something new to IBM personal computers; the PC and XT models, provided they are equipped with a color-graphics adapter board, can be connected to a TV. But the connection is not direct; the signal must be converted by another piece of equipment called an RF modulator. One of the PCjr's features is a built-in RF modulator, so that we can connect it to a TV without fuss. Since the PCjr was set up to create a TV-type signal for its picture, it's only natural to include the computer's sound signals, too. After all, TV sets give us sound as well as pictures.

Here's a quick summary of PCjr's sound features. It can create sounds in two ways—either the same way the PC does or through its new TI sound generator. The PCjr can also use these sound signals two ways—either passing them to its internal speaker, like the PC, or sending them to external parts. The external signal is available either as part of the TV signal or independently in a signal connected to a hi-fi set. With the TI sound generator, we can create three independent pure tones and a noise sound. For each of the three pure voices and the noise voice, we can control the volume.

All these new sound capabilities require programming support, and, once again, BASIC comes through for us.

### BASIC Support

Some programming language critics, myself included, like to throw bricks at BASIC, but when it comes to providing support for the features built into IBM personal computers, it compares to none. Let's take a short tour through the new BASIC commands that support these sound features.

The question of where sounds come from and where they go to is a good place to begin. The BEEP and SOUND statements control these functions. Figuring out what does what can be confusing, and the BASIC manual isn't completely clear, either. Here's how it works. First, there are four new statements:

```
SOUND ON and SOUND OFF
BEEP ON and BEEP OFF
```

If sound is on, then the new TI sound generator is active; when sound is off, then the old sound-generating circuitry does the job. This very simply takes care of where sounds come from—SOUND ON, new method; SOUND OFF, old method. But the explanation of where sound goes to is more complicated.

The sound signals can go to the internal speaker, to the external plugs, or to both—three combinations. (It cannot be turned off so that it doesn't go to either place.) Various combinations of BEEP and SOUND statements determine which one of these three possibilities is taking place. Figure 1 shows how the four combinations of BEEP and SOUND statements and ON and OFF statements control what's happening.

If you study Figure 1, you'll understand how it works. When the TI sound generator is working (SOUND ON), then the computer's internal speaker is turned off—because the internal speaker and its circuitry can't handle the TI generator's sound signals. So the SOUND ON statement, which activates the sound genera-

tor, always sets the internal speaker off and the external connection on. Then, BEEP ON also turns on the external connection, if it isn't already on, and BEEP OFF turns it off, unless SOUND ON is also turning it on—a little too complicated, but that's the way that it works.

Unless otherwise informed, BASIC will use the default settings, BEEP ON

With the PCjr, we can pass the computer's sound signals on to a decent system to achieve top-quality sound.

and SOUND OFF. The sounds come from the original sound circuitry the PC uses, while the sounds go out everywhere.

To make use of the three pure-toned voices and the volume controls, both the regular SOUND statement and the PLAY statement have been extended. For the SOUND statement, the two original parameters of frequency and duration continue to be used, and two new parameters are added: volume and voice. The volume parameter controls the loudness. Volume is set with a number from 0 to 15; 0 is silent; 15 is full volume; the numbers in between set various attenuation levels. If you are familiar with binary arithmetic, you'll recognize that the inverse of the BASIC volume value gives us the bit settings for the TI sound generator's four attenuation bits, A0 to A3.

The new voice parameter of the SOUND statement controls which of the pure tones voice will be used. The voices are numbered 0, 1, and 2, respectively. The last voice, number 2, is the one whose frequency can be borrowed by the noise voice. If we set a SOUND frequency for voice 2 with a volume of 0, then this voice will be silent. But it still will generate a fre-

quency ready for the noise voice to use.

The PLAY statement has also been extended to use the new features, but in a different way. While it takes a separate SOUND statement to activate each of the three voices, a single PLAY statement can control any or all of the voices. The new version of PLAY will take three separate music definition strings, one for each voice. If a string is left off, then that voice isn't affected by the PLAY statement. For example, a statement like this:

```
PLAY , NOTES.1.$, NOTES.2.$
```

would skip voice zero and use the other two voices.

To let the PLAY statement control the volume of the music that it is playing, an additional command letter has been added to the music definition language, V, which sets the volume level between 0 and 15 in the same way that the SOUND statement sets the volume. The default volume level is 8, so we can increase or decrease the volume from the default setting.

The noise voice in the TI sound generator has quite special abilities and so BASIC handles it with a special NOISE statement. The NOISE statement looks like this:

```
NOISE source, volume,
duration
```

The duration parameter is the usual count of clock ticks, which is familiar to anyone who has used the SOUND statement with the PC. The volume is the new, but now also familiar value from 0 through 15, with the higher number creating the loudest noise. The source parameter controls what kind of noise sound is made. The source is a number from 0 through 7, and it works in a way that is similar to BASIC's color numbers, actually controlling more than one thing at the same time.

The NOISE source number determines the base frequency of the noise. And it also controls whether the noise will be "white" or periodic. Figure 2 shows how this works.

BEEP	SOUND	TI Active?	Speaker	Connections	Comment
OFF	OFF	No	Yes	No	default setting
OFF	ON	Yes	No	Yes	
ON	OFF	No	Yes	Yes	
ON	ON	Yes	No	Yes	

Figure 1: BEEP and SOUND control in PCjr's BASIC.

PERIODIC Noise	WHITE Noise	Frequency used for the noise
0	4	2330 cycles (high)
1	5	1165 cycles (medium)
2	6	582 cycles (low)
3	7	Borrowed from voice number 2

Figure 2: PCjr's BASIC's NOISE statement controls base frequency.

There is, of course, quite a bit more information to explore about how BASIC controls the PCjr's new sound abilities and the kinds of sounds they can produce. The possibilities are so great that I'm sure that we'll be trying new combinations for a long time and making some remarkable discoveries. Just to give you a taste of what's in store, let's consider these few examples.

- If we want our computer to play music like an ensemble of two or three instruments, we can use the PLAY statement to start playing three quite distinct music strings, each of which has the part for one of the instruments.
- If we want to make our personal computer play music to sound like a single instrument that plays chords, we can set up three music strings that have an identical time pattern, with the same tempo and duration of notes and rests, but with the differently pitched notes that we need to create our chords.
- We can have our computer play a "round" such as "Row, Row, Row Your Boat," by setting up one music string, shifting and copying it into two other strings, using the MID\$ statement, and then PLAYing the same music in three rotated parts.
- And finally, one of the most bizarre things we can do with the sound features is to have the PLAY statement silently create various frequencies in voice number 2, by using MB (music in the background) and V0 (zero volume, silent) in the music string. Then, we can use the NOISE statement to borrow the frequencies from voice 2, which will allow it to create varying noises. Here is an example of how we could do this.

```
10 SOUND ON
20 PLAY "", "", "MB;V0:L1;
  ABCDEFGFEDCBACDEFGFEDCBA"
30 NOISE 3,8,400
```

If these new sound possibilities excite you, get your hands on a PCjr, plug in the BASIC cartridge, connect it to a hi-fi or TV set, and have fun. ■

# Coming Soon: Games For The PCjr

Software developers of computer games are converting their existing products or developing new ones for the IBM PCjr.

When IBM debuted its two new PCjr models, it quickly became obvious that the computer games industry had been eavesdropping. Most of the major software developers of games acknowledged that they are hard at work converting their games to the new format or creating new ones with exciting graphics. Other software houses are waiting to get their hands on a development machine.

Indeed, four well-known California game design firms—Sierra On-Line, Gobbli Software, Microsoft, and The Learn-

ing Company—had been contacted in advance by IBM to create an initial line of game products for the PCjr. All were represented by finished products at the November 1 PCjr announcement.

Sierra On-Line developed *Adventure in Serenia*, a disk package for the PCjr that was not on display, and two ROM cartridges, *Crossfire* and *Mine Shaft*, both of which are available for other computers. (Sierra is one of the largest publishers of home computer software.) *Crossfire* is a captivating arcade-style shoot-'em-up, in which the player moves a character about

a grid of alleyways in four directions, shooting at anything that moves. This game is one of the popular, best-known titles from Sierra. *Mine Shaft* is a version of *Creepy Corridors*—a game in which your computer draws mazes with diamonds in the four corners. Once you make your way to all four, a doorway to the next maze appears.

We're going to back the PCjr with software as we have backed the PC," said Ken Williams, president of Sierra On-Line. "We think it's an important machine that will do much for the industry

Screens depicting four different games now available for the PCjr.

in general, and we'll be converting most of our games line to the PCjr format."

Roberta Williams, wife of Ken and designer of many high-resolution text adventures for Sierra On-Line (among them *The Wizard and The Princess*, *Time Zone*, and *The Dark Crystal*), has just finished working on an original game designed specifically for the PCjr called *King's Quest*. It's an adventure game along the same line as her others, but it features something brand new to computer games—animation.

"I'd always wanted to do an animated

adventure game," says Roberta, "but the game I foresaw couldn't be written for an existing home computer. I was happy to discover that the PCjr has animation capabilities."

It's almost impossible to use animation of high-resolution graphics with the artificial colors used with other computers, according to Roberta. But with solid colors, you can create beautiful animation. The PCjr has 16 solid colors available to the game designer. And the 128K model has enough memory to handle an animated adventure such as *King's Quest*.

Gebelli Software, founded by Nasir Gebelli, has been a driving force in the Apple game software arena. Two of his games, *Mouser* and *ScubaVenture*, have already been written in cartridge form and were on display at the IBM announcement. *Mouser* is a connecting series of nine rooms through which mice and a cat run rampant. The player's task is to position the movable maze walls to trap all the mice. Color graphics and sound effects are nicely used, and the game will probably appeal most to younger players. The same is true of *ScubaVenture*, a game in which

## Developing PCjr Software

The PCjr opens doors for software developers and users but doesn't create any real problems.

**W**hat does the introduction of the new IBM PCjr mean to all the software developers who have been busily writing programs for its predecessors, the PC and XT?

The news for developers and users of PC software is good. The PCjr opens some new doors but it doesn't create any real problems for software developers or users. Existing PC software doesn't need to be redesigned or rewritten.

Because the PCjr is nearly 100 percent software compatible with the original PC and XT models, we don't need a new set of programs to make the PCjr sing and dance. We don't even need any special revisions to adapt existing programs to the PCjr.

### No Cheating

Software developers can rest assured that their programs will work as well on the PCjr as they do on the PC and XT. However, they must understand the PCjr's basic limitations and promise not to cheat. Of the basic limitations that software developers need to keep in mind, the most obvious are the single drive and the 128K memory.

There are two important issues concerning the disk drive. First, the PCjr computers will have only one. Even when industry's magicians give us ways to add on more drives, most of us will have only the standard one. The obvious lesson here is that programs for the PCjr must require only one drive. Relatively few PCs have only one drive (unless, like the XT, they also have a hard disk), and some program developers have become sloppy about supporting one-

drive systems. The PCjr provides the motivation to create programs that will run with one drive.

Second, the PCjr disk drive is controlled and operated quite differently, with BIOS programs doing much of the diskette control work that the PC and XT's disk drive adapter does with hardware. The exact performance of the disk drive and the load that it puts on the computer's computing power are very different. Many copy-protection schemes rely on close and exacting knowledge of how the diskettes work, so problems in this area are likely to arise.

The most popular model of the PCjr has 128K memory, and for many programs that sounds like plenty. But programmers who are developing software for the PCjr shouldn't assume that 128K in a PCjr is the same as 128K in a PC. The PCjr's display memory needs are taken out of the main RAM. (The PC and XT have dedicated display memory that isn't a part of ordinary RAM.) In most circumstances, this means that a 128K PCjr has 16K taken out for display use. (The amount of memory used by the display can be adjusted up or down, but 16K is normal.) When figuring how much memory is available for a program to use, we also have to take DOS into account. The PC-DOS 1.1 version uses up about 12K of memory, and DOS 2.0 takes up twice that much. Fortunately, the PCjr's DOS 2.10 doesn't need any more than DOS 2.0.

We find that a 128K PCjr has 88K of user memory for our programs and their data. This sets a new standard, or design point, for programs. A program that

barely fits into 128K on a PC will probably not work on a PCjr, but any 128K program that has spare room should run without difficulty on the PCjr.

### And Bear In Mind

There are also some minor things that software developers need to be aware of. The PCjr acts like a PC with a color-graphics display adapter, but it doesn't even try to imitate the PC's monochrome adapter. So a program that requires a monochrome adapter—if there are any—is useless on the PCjr.

There are also lots of niggling technical details that might keep PC programs from working on the PCjr. Programs that break the unwritten rules for PC compatibility by trying to outsmart the PC's BIOS control programs are likely to fail on the PCjr. Few PC programmers have written programs this way, but those who have may now regret it.

The PCjr opens one significant door for software developers: that of software cartridges. Since the PCjr has slots for two program cartridges, program developers can now consider either developing new cartridge programs or adapting existing diskette-based programs for the cartridge. This creates exciting new possibilities for bringing software to the PCjr—and also to the PC, when IBM or another manufacturer gives us a cartridge adapter for PCs and XTs. Cartridges are the main thing that sets the PCjr apart from the rest of the IBM Personal Computer family. The more integrated and compatible the family is, the better off we all are.

—PETER NORTON

the player moves against a scrolling screen and attempts to pick up treasures while avoiding nasty sea creatures.

Another program available for the PCjr is Microsoft's *Adventure*, which comes on a disk, not cartridge. However, it was not on display. More PCjr software is expected from this company. And though *Bumble Plot* and *Juggles Butterfly* (both on disk) from The Learning Company, were also completed they were not displayed at the product demonstration, either. The Learning Company, publishers of the highly acclaimed Apple product *Rocky's Boots*, has concentrated on software for the young user. Most of its programs are aimed toward an educational goal. Most strive for computer literacy, achieved through a fun activity. For example, *Bumble Plot* is a series of six games that use an animated creature, *Bumble*, to teach children ranging in age from 6 to 10, how to draw computer pictures. It also illustrates the concepts of greater than and less than. *Juggles Butterfly* is for the very young, ages 3 to 6. It uses colorful clowns to teach children spatial relationships and to develop simple math skills.

Other software developers are looking toward the PCjr, too. When I spoke to Mike Cullum, director of software development for Avalon Hill Microcomputer Games, he said he was "sitting here now trying to decide how much of our software is compatible with the new machine." According to Cullum, the company (which has published 2 dozen war games for the computer) plans to release a number of games for the PCjr. Among them are *Diplomacy*, the classic world power struggle, *TAC*, a game of tactical armored combat during World War II, *Panzer East*, the invasion of Russia, *Gulf Strike*, a simulation of a modern Persian Gulf war, and *Exercise Rhine*, a naval action game of close tactical warfare based in the North Atlantic during World War II. Most of these games are already available from Avalon Hill for the PC, Apple, and Atari computers. "These are the games that will definitely be available for the PCjr during

the first half of 1984, and we're working on more," said Cullum.

"The company does not view the conversion as a big deal. Special graphics options are available in the new DOS 2.10 that are not available in DOS 1.1, which is

## *Creature Creator is a program that lets you make a strange creature and then teach it to dance.*

what Avalon Hill's existing PC software uses. "So it will only enhance the games," said Cullum. "And the only reason we haven't gone to DOS 2.0 yet is because of all the users with DOS 1.1. We try to make our games as compatible as possible with the largest group of users," he continued.

Broderbund software, another big name for Apple, Atari, and Commodore computers, currently has no public plans for the PCjr. However, the company's director of marketing, Cathy Carlston, said, "The company will develop some PCjr products in 1984." In all likelihood, we can expect conversions of Broderbund's top hits such as *Lode Runner*, *Choplifter*, *Serpentine*, and *David's Midnight Magic*. Carlston hinted that we might see an original title or two for the PCjr specifically. Broderbund's PCjr software will probably first be published on disk, which is standard operating procedure for this company.

### **Spinnaker Software**

Spinnaker Software, the largest publisher of computer learning games in the world, also has plans for the PCjr. Initially it will publish *Facemaker*, a drawing composition program, *Fraction Fever*, a fast-paced action game in which the player must match correct fractions and zap incorrect ones, and *Kindercomp*, a series of games based on drawing, matching

shapes and letters, writing words and names, and filling in missing numbers—all in time for the arrival of the PCjr in the stores. The plan at Spinnaker is to support the PCjr with the company's entire line of children's learning software, including the highly acclaimed detective games *Snooper Troops I* and *Snooper Troops II*. Currently, Spinnaker's products are available for Apple, Atari, IBM PC, and Commodore 64 home computers.

DesignWare creates learning programs for ages 4 through adult for the Atari, Apple, and IBM PC and plans to convert its entire line of seven games for the PCjr. *Math Maze*, *Spellakazam*, *Spellagraph*, *Trap-A-Zoid*, and *Spellicopter* are all journeys into word and number play. *Crypto Cube* is a three-dimensional word game with a built-in puzzle generator that allows you to create your own games. And *Creature Creator* is just what it sounds like—a program that lets you make a strange creature and then teach it to dance.

Epyx, a large publisher of computer games for Atari, Apple, IBM, Commodore, and Radio Shack computers, also plans to convert most of its successful products to the PCjr format in 1984, but the company hasn't made any announcements yet. However, since much of Epyx's software includes fantasy role playing and adventure games, you can expect similar programs for the PCjr.

Human Engineered Software and CBS Software, both with extensive lists of software titles, have carefully sectioned their product lines into about 30 percent entertainment, 30 percent home business, 30 percent productivity software, and some utilities, which means that although both companies plan to support the PCjr with the same enthusiasm they have shown for the PC, neither will offer many games.

The PCjr is a relatively inexpensive machine with plenty of memory and graphics capabilities. Only time will tell more about this new machine. What is certain, however, even at this early stage, is that the PCjr, if nothing else, might be the best game machine ever designed. ■

# The Mainframe Marketplace: XT/370 And 3270 PC

IBM's dramatic new mainframe products legitimize the Personal Computer. They cry out for creative software development, pricing, and distribution in a market unlike any seen before.

Photograph: Dennis Reinhardt

**H**istory will mark the end of 1983 as a watershed time for the computer industry. Texas Instruments abandoned the home market. Osborne Computers folded its tent. DEC and other manufacturers had severe earnings setbacks. And IBM went into the workstation market. It is not surprising that IBM began manufacturing workstations. That portion of the market has been on the upswing for a while. Many workstations are based on UNIX, which is where workstations got their start.

What constitutes a workstation? While some manufacturers use different definitions, it is for our purposes a terminal with enough intelligence to execute the same programs as the host computer to which it is connected. It may emulate the host so that it seems to be using the host machine's operating system, even though the workstation's control program or local operating system may be quite different.

Another approach is to run a processor-independent operating system, such as UNIX, on both the host and workstation. UNIX is inherently a multitasking operating system, so the main difference between the host and workstation is processing power and the amount of disk storage.

Other workstations may provide additional facilities not available on the host system. The facilities can vary greatly, depending on the user's needs. Some of the add-ons include high-resolution graphics, color, interface to laboratory instrumentation, and execution or emulation of nonhost operating systems.

Some of the most popular workstations within the UNIX world are those produced by Sun Workstation and Charles River Data Systems. Western Electric is entering the fray with workstations derived from Bell Labs Interactive Terminal (BLIT). All provide a full Unix operating environment, local data storage, host communications, and high-resolution graphics.

In many ways the 3270 PC and XT/370, the new high-end PCs that IBM announced in October, are significantly

less capable than these workstations. The XT/370 can only perform one task at a time. Although it provides the full capabilities of a PC-XT, it can't do so concurrently with 370 operation; 370 tasks are

**Who will buy the 3270 PC? Anyone who is a potential customer for a 3270-compatible terminal. The multi-session capability alone is a significant aid to programmers.**

limited to those that can be performed as a single task under VM/CMS. The 3270 PC, while offering one of the finest color displays available, does not provide graphics.

Why, then, all the fuss?

It's altogether too easy to say that the main reason these machines will sell is the three magic letters on the front. There's much more to it than that.

First, both products at last legitimize IBM's bastard offspring, the PC. Sources within IBM report that the micro-370 chip set was in design for 3½ years, with no clear idea of what box would be its home. It could have been a derivative of the Displaywriter. It could have been the 68000-based machine produced by the Instruments Division. It could have been implemented on Multibus cards. It could have been stuck inside a 3270 terminal. It could have been something brand new.

But it was none of those. The processor, memory, and communications controller boards were built to PC specifications, and the XT became their home. Likewise, the 3270 PC is built on that familiar low-slung cabinet. Inside the 3270 PC, however, are many changes,

both in hardware and control program—although not so many that it can't run PC programs. In fact, it is something of a champion juggler, able to maintain as many as seven different sessions simultaneously. Four of those are 3270 sessions, where each is a separate log-on entity to the mainframe. One session is a standard PC-DOS task, and there are two "electronic notepads" that permit full-screen access into a dedicated file. All of the sessions can be displayed on the screen in windows. The user can change the shape and size of the windows and move freely between foreground and background tasks. The color display is strikingly clear, giving some of the highest legibility we have seen yet on color screen.

Who will buy the 3270 PC? Anyone who is a potential customer for a 3270-compatible terminal will have to give this machine a hard look. The multi-session capability alone is a significant productivity aid to programmers and will also be useful to the professional or knowledgeable worker who requires multiple simultaneous access to mainframe programs. Add to that market the attractiveness of running PC programs locally, throw in the electronic notepads, and you have got a winner.

### Bigger Mainframes

It doesn't hurt IBM one bit that products like the 3270 PC will be more demanding on mainframe resources. More sessions mean more demand for compute power. More demand means bigger mainframes. Who benefits? The users and, obviously, IBM. Less obviously, the MIS managers reap a harvest, too. Instead of husbanding a scarce, expensive resource, they will increasingly find themselves controlling a corporation-wide network, with the mainframe as its hub. There will still be lots of noncentralized personal computing going on, but users who require access to corporate databases for their personal computing will have it easier than ever.

What then, is the rationale for the

## New Rules In The Mainframe Game

IBM has moved the target for hardware and software developers and competing microcomputer manufacturers.

Software developers for the PC, microcomputer competitors, and terminal manufacturers are undoubtedly losing sleep over IBM's two new PCs the XT/370 and the 3270 PC.

Several IBM watchers see the XT-370 in particular as the beginning of the end of open architecture on the PC, and the beginning of IBM's push toward Unix.

"It's like a depth charge," suggested IBM follower Hesh Wiener. "We don't know how bad it's going to be until we see the bodies start floating to the surface."

The experts concur that IBM no longer wants to deal with the confusion created by the PC open architecture, which allowed many independent software (and hardware) developers into the lucrative PC marketplace. The problem has been aggravated lately as corporate PC users demand a link between their PCs and the vast amounts of data stored on giant IBM mainframes—at least three-fourths of the world's computers.

### Mainframe Access

Now with the XT/370 (which costs approximately \$10,000 to \$15,000) users get both a PC and a direct access to a mainframe running VM/CMS. Importantly, IBM is keeping its Motorola 68000 and the VM software in the XT/370 proprietary.

"In the beginning IBM wanted a fragmented market. Now it's chaos. They are not in control of their destiny and they don't like it," said Robert T. Fertig, referring to companies such as Microsoft, which provides the operating

system custom made for the PC.

"Ultimately," continued Fertig, a consultant who started in the mainframe business, "they're going to have to come over to UNIX. It's the only operating system with multi-tasking, multi-work-

The experts concur that IBM no longer wants to deal with the confusion created by the PC open architecture.

station capability."

And, added the Greenwich, Connecticut-based IBM watcher, the market is moving toward the 32-bit machines, also ideal for UNIX.

"The XT/370 doesn't auger well for Compaq and the other plug-compatible manufacturers," said David Ferris of the Ferris Corporation in San Francisco. "It's harder and harder for the plug compatibles to remain compatible."

Ferris, whose company provides personal computer services to large organizations, is less concerned about users and software developers being hurt by the IBM senior products. IBM doesn't want to discourage the developers who build "value added" into their products, and it doesn't want to handle service and maintenance that are resource-intensive for IBM, according to Ferris.

"And most PC users won't find the XT/370 particularly attractive," he added. "VM/CMS is not as friendly an

environment as PC-DOS."

### Not For Novices

Both Wiener and Fertig emphasize that at this stage the XT/370 is for big-systems engineers and programmers—not novice PC users. (Thus "personal" PC users can continue to run programs available for the various independents.)

XT/370 is perfect for the small to medium-size company that wants to develop new System/370 programs and maintain its existing ones. In the past, programmers had to do maintenance and testing when the system was not in production use.

Wiener, who works at *Technology News of America* in New York, gives the example of a shoe store chain that can develop programs on the XT/370 at its headquarters and distribute that same program to its local shoe stores, which are also running the XT/370. Each local shoe store then compiles its sales and tax data, for example, and transmits it to headquarters. Hospitals and big accounting firms are just two other examples of sites where the XT/370 would be appropriate.

There are two other big ramifications to the new XT/370:

- Local users, as in the shoe store example, can now also access IBM's growing service bureau business, the Information Network, for additional computer services.
- XT/370 users now have access to more powerful, large systems database management systems programs—some of them already widely installed, such as RAMIS from Mathematica.

—Connie Winkler

XT/370? Can't the 3270 PC, given sufficient mainframe power, do just about everything the XT/370 can do and more? In a word, no.

The XT/370 is truly the machine for all seasons, a veritable panacea for users of all persuasions. Need more horsepower than that wimpy 4.77 MHz 8088 provides? Tap the 370. Need to run mainframe packages in a remote location and can't get co-ax communications lines installed until next June? That's right, XT/370 to the rescue. Thanks to its built-in communications board, the XT/370 can also perform as a 3277 terminal. As if that weren't enough, it also functions as an IBM 3101 dumb ASCII terminal. Unlike the 3270 PC, it doesn't multitask among these functions, but permits rapid switching. Furthermore, the conversion to 370 EBCDIC and PC ASCII files is built in.

There is ample local storage to run several of IBM's mainframe compilers, as well as to store data files. The 4 megabyte virtual address space and inherent speed (half that of a 4321) means that big mainframe applications will run successfully. Examples are statistical packages, query languages, modeling programs, database managers, and internally developed user-specific systems.

In one stroke, IBM has created a new market and a host of new marketing problems for vendors of mainframe software packages. Many of these packages sell for \$50,000 and up, and include hotlines, technical help, user newsletters, and periodic updates. Many are covered by service contracts costing more per year than an XT/370.

How to sell to the new market? Include a machine with the purchase price? Develop versions for less money with lesser capability? License software on a per-user basis rather than a per-machine basis? There are no clear answers, not even from IBM. After all, most mainframe compilers and utility programs are purchased on a stiff one-time charge, plus a monthly user fee. My guess is that compiler and utility vendors will go the low-price high-volume

route, perhaps eviscerating the high-priced mainframe software market in the process. They will do everything in their power to differentiate the XT/370 from larger machines, but it will become a los-

**Most mainframe packages are programmed to check the system's serial number during operation. Others have a built-in "time bomb" that looks at the system date.**

ing game. The inherent power of the machine will be their downfall. After all, there are already many multiuser operating systems available for the 370, including UNIX. How long will it be before they are implemented on the XT/370? There's simply too much there for just one user. Once the XT/370 comes forth as a multiuser machine, what of the packages that run on the big mainframes? What software vendor wants to be put in the ludicrous position of charging \$6,000 for a 9-track tape and \$395 for a floppy disk?

### Marketing Issues

The database management vendors may have an easier time of it. They will want to move subsets of their mainframe databases to the XT/370, with versions of their programs giving fast, local access to a truly distributed database. They can easily set up a pricing and support structure to handle the master/slave relationship between the large mainframe and the outpost machines, pricing the system on a per-user basis.

An open question is that of software duplication. Most mainframe packages are programmed to check the system's

serial number during operation. Many others have a built-in "time bomb." These programs simply look at the system date and refuse to operate beyond a certain date. Vendors of such programs typically send out quarterly or semiannual updates to their products that, in addition to correcting bugs and adding enhancements, reset the time bomb date. How will the XT/370 affect such practices, especially in light of the machines outside the rigid rules of the data processing department? DP managers, long familiar with such practices, have no trouble dealing with the demands placed on them by the software vendors. Will laboratory managers and personnel executives fare as well?

A final question involves the impact that the XT/370 will have on the PC's open architecture. IBM watchers are still uncomfortable with the way IBM markets the PC. It is, after all, unprecedented in IBM's approach to the market. They are quick to seize every opportunity to accuse Big Blue of renegeing on the deal. The mere fact that the 370 card set was designed to drop into an unmodified PC-XT indicates, for the time being, continuing support for open architecture. DOS 2.0 devices should have no difficulty in being addressed as 370 devices. Of course, IBM will not release any of the source code to VM/PC, nor is it likely to encourage anyone to tap into the bus between the 370 board and the memory board.

The 3270 PC and 370/XT are really just the tip of the iceberg. Some chilling new developments will be coming from places other than IBM. In the coming months we'll see a desktop VAX and multiuser PC-compatible systems, to name two significant developments. Designers will create a flurry of applications and system software to fill the gaps that these new products create.

But the real pressure will be on marketing and sales executives as they balance products, prices, and modes of delivery against the divergent expectations of mainframe and microcomputer users. ■

# The XT/370: A Technical Overview

The success of the XT/370's novel architecture depends on the sophisticated illusion of the "virtual machine."

**A**lmost 20 years ago, in April 1964, IBM announced its system/360, a new line of computers radically different from any then produced in the industry. Among its innovations (at least with respect to other commercial products) were the 8-bit byte, the 32-bit word, new circuitry and packaging, and the availability of a large number of general-purpose registers for performing computations. In spite of embarrassing delays in the delivery of these computers and their operating systems, System/360 proved to be a dramatic commercial suc-

cess for IBM—more dramatic in terms of market share than even IBM's personal computer.

IBM announced the successor product in 1970. The System/370, which was to be "upward compatible" with the older line, at first appeared to offer few advances over System/360, and it was not until 1972 that IBM finally revealed what industry observers had long expected: The System/370 could use "virtual memory." Since then, the 370 architecture has continued to evolve as the industry standard for commercial mainframe computers.

The operating system software for the System/360 and /370 machines evolved along a path that few, if any, observers would have predicted. In late December 1964, during the holiday lull, when telephones were uncommonly silent and active minds had just a little more leisure to be creative, researchers at IBM's Cambridge (Massachusetts) Scientific Center first conceived the idea of a "pseudomachine" control program for the new System/360 computers. Their ideas were rooted in the CTSS time-sharing system developed at Massachusetts Institute of

Technology, literally across the street from the Scientific Center. The purpose of time sharing, of course, was to make the resources of a large mainframe computer available to many individuals at once, as if each person had his own private computer—in other words, personal computing. The IBM researchers, taking this idea one step further, conceived of an operating system that would so thoroughly simulate a "virtual machine" for each user, that programs could be written in any language to run in the virtual machine just as if they were running on a dedicated real machine.

The earliest implementation of this operating system was called CP-40: CP for "control program" and 40 because it was first run on a modified 360 "Model 40" in the fall of 1966. CP was designed and first sold for systems programming. CP-40 was the operating system that created virtual machines for each user. In turn, inside each virtual machine, and dedicated to a single user, there ran a completely different operating system called CMS: the Cambridge Monitor System. While CP-40 was carefully designed and constructed in order to successfully simulate virtual machines, CMS was put together very casually, because its function—providing file and program management services to a single user—was, comparatively, so much simpler.

The story of the subsequent evolution of CP-40 and CMS is a colorful, albeit long one. They were offered to IBM customers as CP-67/CMS to be used on 360 (model 67) computers. They were subsequently integrated into the VM/370 operating system, which IBM introduced to support the virtual memory for the System/370. The CP part of VM/370 was a mostly rewritten version of CP-67, and the CMS part was mostly unchanged. Since that time, VM/370 has evolved through many release versions.

To IBM VM/CMS was never a "production" operating system. For example, it didn't support tape labels. IBM alternately sold VM as a host for multiple sys-

tems and attempted to push it into a systems programming corner. Support for new devices always came later for it than for OS. VM is flexible enough that it was possible to implement "handshaking" DOS/VS and OS/VS1 to improve performance of the guest operating system.

It requires at least 7 bits to uniquely identify a specific real page.

In October 1983, IBM announced another milestone in the evolution of both the 370 computer architecture and VM/370: the XT/370 Personal Computer and its operating system, VM/PC. This introduction introduces a few concepts that are essential for understanding the new product and to emphasize that both the computer architecture and the operating system are mature designs, with readily recognizable ancestors more than 20 years old. (This maturity has both its advantages and its disadvantages).

The most important concept in the design is that of a "virtual machine." Real computers have certain components that are fundamental to the computer's operation: random-access memory, general-purpose register, floating-point register, a "program status word" (PSW), and a variety of peripheral I/O devices. It is particularly important to note that virtual devices can be simulated even where the real system does not contain the equivalent hardware. VM, for example, was used to effect 32-bit addresses on machines with 24-bit addressing.

The most important function of an operating system on a shared mainframe computer is to allocate these scarce resources among all users of the computer, of which there may be hundreds. This must be done in such a way that each user gets a "fair" share of the resources (according to his priority), and that no user

can interfere with another's rightful use of the resources.

### Creating an Illusion

The way that the CP portion of the VM/370 operating system accomplishes this objective is by creating the illusion for each user that he has exclusive use of these resources in his own private "virtual machine." Many ingenious artifices are required to sustain this illusion, but in essence what happens is that only one user at a time is really "running," and during that time, the one user has exclusive use of the real-machine resources. When the user's allotted time is finished, private copies are made of the registers, PSW, for instance. Another user is selected to run, the registers and PSW are reloaded from the new user's private copies, and the new user's program is started.

The most important special case involved in simulating a virtual machine is the handling of "virtual memory." It is possible to imagine handling virtual memory just like other resources, that is by letting a user access real memory while he is running, copying all of his memory to a private area when the user's time is up, and then loading memory for the next user. This strategy is called "swapping" and is actually implemented in some form or another on many time-sharing systems. However, some models of System/370 provide for hundreds of megabytes of virtual memory, and even the XT/370 allows 4 megabytes, so swapping is quite impractical.

Instead, the approach taken by VM/370, as well as by its descendant VM/PC, is to use "memory mapping" and "demand paging." This requires special hardware in the computer to perform what is called "address translation." This means that when the computer is in "translation mode," all addresses actually used by a program are "virtual" and have to be translated or "mapped" to real storage addresses. Such translation hardware was developed for the original 360 Model 40 used at the Cambridge Scientific Center to

develop CP-40, and it is similar hardware that eventually endowed System/370 with virtual memory capability.

All address translation hardware uses tables called "page tables" in order to store the real address that corresponds to any virtual address. There must be one table entry for each possible virtual page address. A "page" is simply a unit of storage, which on the XT/370 consists of 4096 contiguous bytes. Pages must begin at an address which is an even multiple of 4096. Since the XT/370 supports up to 4 megabytes of virtual memory, it can have at most 1024 virtual pages. Thus page tables on the XT/370 have 1024 entries.

Each page table entry, in turn, consists of the address of a real storage page and several additional bits of status information. Since the XT/370 has just 512K of actual RAM storage addressable by the 370 instruction processor, there are only 128 real pages. This requires at least 7 bits to uniquely identify a specific real page. In addition, there must be at least 3 bits of status information for each page, making a total of 10 bits. It happens that each page table entry on the XT/370 is 12 bits in length, so there appear to be 2 bits left over. One can speculate that these might be used to support more real memory at some time in the future.

The way address translation works is that every time a program references a page, the hardware checks the page table entry for that page. One of the status bits indicates whether the page is actually resident in real storage. If it is, the real page address is retrieved and used. Otherwise the page has either never been used before, or it has been used but is available only in a copy kept on the hard disk. In either case, the operating system is interrupted and presented with information that indicates which page is required. The operating system must then either supply a page of zeroes or fetch the saved page from the hard disk. Once the desired page is loaded in memory, the page tables are updated appropriately, and the program can be restarted from where it left off.

### Program Thrashing

This whole complex process is called "paging," and even casual users cannot afford to ignore it, because it may be the principal source of a machine's very slow performance. As long as virtual memory has existed, people who develop applications to use it have recognized that it can cause severe performance problems. Basically, although virtual memory can be a boon for the application developer because he can use it to avoid constructing complex overlay programs and avoid doing his own I/O to handle large arrays or matrices, it can also be a bane if stretched beyond certain hazy limits. If a program ever acts in such a way that it references a different page for almost every instruction, and if there isn't enough real memory to hold most of the virtual memory, an unpleasant situation known as "thrashing" may result. Especially since the Winchester disks used on the XT/370

Winchester disks  
used on the XT/370  
are much slower  
than disks used for  
paging on  
mainframe 370s.

are much slower than disks used for paging on mainframe 370's, it can safely be predicted that developers of applications for the XT/370 will have to confront the demon of thrashing.

### But 512K Ain't Bad

On mainframe 370s using VM/370, the CP part of the operating system, as has been said, handles all of the management of real resources required in order to simulate a virtual machine for each user. In the XT/370, a very large part of this work is unnecessary, since there is only one user. However, since there is still virtual memory to be simulated, it is necessary

that code to do this be present.

There is, in addition, the simulation of I/O devices. On a mainframe System 370, each peripheral I/O device is associated with one or more "addresses." These addresses, however, are not related at all to storage addresses, either real or virtual. This architecture is in fact quite unlike what is found on microcomputers; there are no ports and no direct memory access (DMA). Instead, any program that wishes to communicate with an I/O device must provide a "channel program," which consists of instructions to the I/O device and where to put or get data. A special instruction ("Start I/O") is then issued which indicates which channel program and which device should be used.

Now, just as with memory, the concept of a virtual machine provides for both real and virtual I/O devices. And similarly, there are both real and virtual device addresses. It is the responsibility of the CP part of VM/370 to translate virtual device addresses and channel programs into real ones. This is probably the most complex part of CP. Since the VM/PC control program does in fact support a virtual machine, it too must simulate virtual devices. The process by which it does this is, if anything, even more interesting than the analogous process in VM/370. Although the XT/370 does not support the SIO instruction as such, there is another special instruction called "Diagnose," which does almost the same thing. Effectively, the Diagnose instruction specifies a virtual device address and the equivalent of a channel program, and the VM/PC control program interprets these to produce the desired effect. Of course, the diagnose instruction is issued from inside the CMS portion of VM/PC, which is usually at a much lower layer than the user's application program.

For example, the user's virtual machine in VM/PC operates with one or more virtual disks at certain conventional addresses. These virtual devices have been known since the earliest days of CP/CMS as "minidisks," since they were

implemented as small partitions of real disks. VM/PC implements such virtual disks in one of two very different ways. In the first case, a minidisk is either a partition of one of the Winchester disks on the system or it can be on a floppy. In the second case, the minidisk can actually be resident on a mainframe running VM/370 to which the XT/370 is attached. A configuration program is provided by which the user or administrator of the XT/370 can specify exactly how big the virtual disk is and where it should reside.

In either case, it is the responsibility of the VM/PC operating system to simulate the given I/O instructions and read or write the data as desired. If the data are "local" to the XT/370, that is, on one of the attached hard or floppy disks, then VM/PC sets up a control block and notifies the 8088 CPU. The 8088 CPU always has a copy of PC-DOS resident in private memory of its own (on the system board), and finally performs the required I/O using standard PC-DOS services. (Note: VM/PC has been carefully designed to use an unmodified XT system board and unmodified DOS 2.0, so any desired device, including a non IBM hard disk, can be supported.) Thus, CMS minidisks are actually single PC-DOS files, and hence can be moved and copied (but not interpreted) with standard DOS utilities.

If, on the other hand, the minidisk is "remote," on the mainframe to which the XT/370 is attached, then VM/PC communicates with a server process running on the mainframe to read or write the data. The process is thus very similar to the way file servers are implemented on local networks. (What is especially nice about this is the fact that a program need *not* be concerned with the physical location of a file. Thus, many mainframe applications will not require modifications.)

Output to the printer is handled much the same way. Here again, the printer can be attached to either the XT/370 or to a mainframe the XT/370 is communicating with. The actual destination of printer output at any point in time is under the control

of a SPOOL command. Again, if the printer is local, VM/PC notifies PC-DOS to do the actual I/O. Or if the printer is remote, VM/PC communicates with the same server program on the host to do the work.

One last function of the CP portion of VM/PC needs to be mentioned. There are a number of commands the user can issue to CP in order to control his virtual machine. SPOOL is one of these. Others have to do with managing the virtual

## The printer can be attached to either the XT/370 or to a mainframe.

device configuration. Still others are useful for debugging and allow the user to examine or change memory and registers. In particular, there is a very powerful TRACE command that allows the user to get control when specified events occur, like branches, alterations of storage, or execution of special instructions.

### Layering

It is useful to think of the XT/370 and VM/PC in terms of layers. At the lowest layer, there is the physical hardware. This consists of 768K RAM, four different CPU chips (an 8088, two 68000s, and an 8087), address translation hardware, a special card for communicating with a host mainframe as a 3270, and all the other standard circuitry of an ordinary PC XT plus peripherals. On top of this a user first invokes PC-DOS in the normal way. Then VM/PC is called just like any other DOS application program. The VM/PC code is loaded into the special 370 memory card and the 370 processor is started, which leaves DOS and the 8088 quiescent until I/O is required.

The next layer is the CP portion of VM/PC. As has been described, this part has responsibility for managing the "real" hardware and simulating a virtual machine

and memory. Of course, at a lower layer, PC-DOS is still there managing the local I/O devices. Thus PC-DOS functions as a kind of "microcode" in creating the illusion of a real System/370.

The next layer up, closest to the user, or at least to his application, is the CMS portion of VM/PC. This is, remember, the "operating system" that controls the virtual machine and provides file system and program management services to the application program, and much more besides. A user can issue commands directly to CMS to invoke a wide range of functions. In fact, the CMS command language does not, for the most part, make any distinction between commands, system utilities, and user programs. A command or utility or application is invoked simply by specifying its name. Many CMS commands, as well as all user programs and utilities, such as compilers and editors, are simply executable files stored on a minidisk. VM/PC does not include support for some CMS capabilities that require a "second" virtual machine, including IBM's powerful file access method VSAM, detached processing, and inter-user communications.

There is also a command interpreter known as EXEC2. Sequences of CMS commands can be placed in EXEC files and executed together much like PC-DOS BAT files. However, EXEC2 is really a complete programming language with variables, control structures, and extensive string-handling functions, so that it is much more like the Unix Shell facility. Entire applications, and very sophisticated ones at that, have been written for VM/370 using EXEC2 and basic building-block tools to communicate with the file system, the user's CRT, and other I/O devices. This ease of constructing applications with simple building blocks is undoubtedly at the heart of the reason why VM/370 has been so popular on mainframe 370's... just as UNIX has been in its sphere. Now that the XT/370 has arrived, VM/PC is likely to achieve an equally wide popularity. ■

**THE NEW BREED  
A WHOLE NEW BREED  
OF INTEGRATED  
SOFTWARE  
FOR THE IBM PC/XT.**

CIRCLE 114 ON READER SERVICE CARD

# —NOW ALL IT TAKES IS ONE SCREEN TO DO EVERYTHING YOU'VE ALWAYS WANTED TO DO, AT ONE TIME.

Word processing. Spreadsheets. Data base management. Charting. JACK2 is the first integrated software product to do them all, simultaneously, on the same screen. All without ever changing disks or exiting programs.

No need for windows. No need for additional monitors or hardware of any kind. No need to close one file before you open another. And no need to learn a specialized computer language.

JACK2 is as easy to master as it is powerful to use. Picture a screen that graphically displays your disks and names them. With envelope icons that can be scrolled up or down from 1 to 50 showing you all your files. JACK2 will even show you the forms inside your envelopes, then let you choose the one you're looking for simply by pointing to it. All commands are in English. All are displayed on a single line and all have the identical function throughout JACK2.

But the real breakthrough behind JACK2 is its ability to edit word processing text, perform spreadsheet calculations, manage data base information and illustrate the results with charts or bars. All at once. All on the same screen.

And while the integrated applications of JACK2 offer unlimited potential as a busi-

ness tool, individually they offer everything an expert could ask for. Because we've taken the best of all the rest and made them better.

JACK2 offers features other word processing programs only dream of. Like multiple columns of text on the same page that can be edited without affecting other text. Or, an innovative "transparent band" will allow you to view and manipulate confidential notes and calculations in the middle of a document, but to your printer they're invisible. Plus, a variable sentence function will tell the computer to watch for a particular word, or spreadsheet comparison, and based on its content, will automatically insert a variety of preselected sentences or phrases in response.

JACK2 spreadsheets allow you to create complex formulas using plain English. Without cell language like  $A22 = C38 - G63$ , your next model will be as easy to remember as  $\text{Margin} = \text{Sales} - \text{Cost}$ . You determine individual column widths, depths, justification and decimal points. You can even identify specific cells to only accept telephone, social security, account numbers or other strings.

JACK2 data base management lets you sort records with a choice of three levels. Create additional forms with up to 1000 fields. Design the form format

The new breed of integrated software -- that's Jack2.

### Sales Commission Statement for September

Dear Ralph,

Your sales for this period were \$1821 as shown below. Based on your fine performance I am pleased to make you a member of the President's club.

	Jun	Jul	Aug	Sep
Sales - A	134	112	245	243
Sales - B	43	45	128	79
Total	177	157	365	322
YTD	177	334	699	1821

#### Commission Calculation:

5% items: 5105

1% bonus: 1821

Total: \$ 6126

right on the screen, line by line, column by column. Plus, you can change the original form at any time, adding, deleting or altering fields. To reformat all previous records, simply update them, using the new format without any loss of data.

The beauty of the JACK2 charting function is in its simplicity. What you see on the screen is what we print on the page. There's no need for expensive plotting equipment to produce a presentation quality bar chart or point graph. You determine the titles and values of the x and y axes. You specify the scale. You choose whether headings fall below the line or above individual bars. Or let JACK2 decide.

So, if you've been searching for a new breed of integrated software for the IBM PC and XT, you've found it. From word processing, to spreadsheets, to data base management and charting, only JACK2 will let you do everything you've always wanted to do. On the same screen. At the same time.

JACK2 is available for the IBM-PC with 128K and two double sided disk drives, the IBM-XT with 128K and one double sided disk drive with supplemental JACK2 XT Installation Package as well as other IBM PC-compatible computers.

**"After careful study,  
we standardized on the IBM-PC. And the IDE line  
was the only choice for our add-ons."**

— Randall B. Grossman, Management Analysis Center, Cambridge, MA

When Fortune 500 companies hire you to plan and implement top management strategies, you just don't have room for error. So when Management Analysis Center decided to standardize on add-ons for their IBM PCs, they wanted the most reliable, most integrated line of products they could find. Their choice? Significantly, IDE.

*"We quickly learned that we wanted an IDE expansion board in every PC."* MAC began by trying several other brands of add-ons—but things didn't always go as they were supposed to. All that changed when they discovered the IDEaplus Combination Card from IDE. Before long they were trying other IDE products. And soon after that, they were using all of our products simultaneously. With beautiful, trouble-free results.

*"Now when we install an IDE board, I almost don't bother to test it."* Of course, one reason people may feel they don't have to test our products is because we test them. Not just as components, but as integrated units—and for 100%

Shown above, our IDEaboard Memory Card, IDEaplus Combination Card, IDEAComm 1200 Integral Modem, and  
and networking products. IDEAComm 3278 Mainframe Communications

O U T O N I D E:

of their functions. But product performance is only one side of our reliability...

*"Their service is just superb. And we can count on it in all our offices nationwide."* Support—that's the other side of our reliability. And you'll find plenty of it at IDE. Across the country, and internationally. It's the kind of support that will be there in the future, too, as our line expands.\*

*"When it comes to add-ons for the IBM PC, it just isn't worth going anywhere else."* If reliability across a broad product line sounds like something you can use, give us a call at 1-800-257-5027 (in Massachusetts, call 617-275-4430). We'll be glad to get the word out to you on all the new ideas at IDE.

**IDE**

**COMPLETE  
DATA COMMUNICATIONS  
SYSTEM NOW AVAILABLE  
AT YOUR NEAREST  
OUTLET.**

Introducing

# ACCESS 1-2-3™

Now for the  
IBM PC  
and others.

**Novation PC1200B™ Modem**  
+  
**Crosstalk XVI™ software**  
+  
**all accessories.**

Access 1-2-3 is a simple idea.  
It means you can now walk  
into your nearest computer  
outlet, buy one package off  
the shelf and walk out with  
the best fully integrated communications  
system for your personal computer.

What we've done is taken the best 1200 Baud modem,  
our PC1200B—plus Crosstalk XVI, the best available  
software—added instructions and whatever else is  
needed for your particular computer—and put them all  
in one box.

## The advantages:

First, you get a total system. No missing parts. No  
wrong parts, either. You can be sure you have all you  
need and all you need to know.

Second, it's the best system you can put together.  
Absolutely no compromises. You simply take it home, open  
the box, hook it up, and start up. Your only surprise will  
be how really easy it all works.

## The best modem.

It's our PC1200B modem in a format to fit your par-  
ticular computer.

The Large Scale Integrated circuitry is our own 3rd  
and 4th generation design. It's the most advanced tech-  
nology, eliminating all kinds of parts and running better  
and cooler.

## The right software.

The Crosstalk XVI programmers have  
pulled off a little magic. Without com-  
promising a bit on all the things you want  
and need to do, they've made them all  
easier to do on our PC1200B modem.

No wonder Crosstalk XVI is recog-  
nized as the best in its field.

## Easy 1-2-3 instructions.

The new instructions that go  
with the Access 1-2-3 series  
help make your life  
easier, too. You don't  
have to know a byte  
from a baud to get  
going. High-tech talk  
is out. Plain English is in.

## Cables and connectors.

If your particular computer needs  
a cable and connector, they'll be in the package. No big  
deal, of course—unless you've gone through the frustra-  
tion of piecing together a system with something less  
than expert help. Well, no need to worry here. With  
Access 1-2-3 it doesn't matter who's minding the store.

The expertise is built in.

## Available now.

IBM PC, IBM PC XT,  
Columbia Multi-Personal,  
Compaq Portable, Corona  
Portable PC.

The first models in our Access 1-2-3 series  
are at your dealers right now.

More models are being added and we'll  
soon cover all of the important personal  
computers. See your dealer for the latest list.

## And the price.

Packaging up a sensible system has let us do some-  
thing sensible for the price, too. Entire system—  
only \$595.

## Included: CompuServe

Your Access 1-2-3 system now carries an extra  
bonus—two hours of free demonstration time on one of  
the most extensive and best data banks, CompuServe. A  
nice way for your computer to meet the data world.

Talk to your dealer today.

## All of the features you want and need.

- LSI smart modem, 300 or 1200 baud, full duplex, uses just one slot on all models.
- Crosstalk XVI software.
- Directory for single stroke log-on to 40 separate entries.
- Auto dial (TouchTime or rotary), auto log-on, auto answer.
- Telephone line status, busy detect and automatic redial.
- Auto monitoring through computer speaker.
- Captured data to printer, disk or buffer transfer.
- Disk to disk transfer.
- Extensive error-checking and automatic retransmission.
- Display of transmission time for each file with baud rate and available disk space.
- Complete on-line control of stop bits, parity, baud rates, duplex.
- Modem self-test.
- Full 2 year warranty.

SPECIAL REPORT/DOROTHY J. SAMUELS

# Computer Scan: No Place To Hide

The information-technology revolution has exacted a steep toll on individual privacy—often without our knowing it.

**Announcing  
Advanced DB Master™  
for the IBM® PC.**

ZOOM.

# Imagine *your* filing system in the age of electronic information. We did.

How to automate your paper-based information system with a personal computer. You can.

Advanced DB Master delivers a new generation of information management software for the new generation of inexpensive, powerful personal computers.

## **Information management. Easier to use by far than a data base language. More powerful by far than a 'personal filing system.'**

Advanced DB Master is designed to work with your documents—to store them, to retrieve them, to compare them, to print them, to reference them—just like you already do with paper and filing cabinets right now.

Only a whole lot faster.

And a whole lot better.

And in a lot less space.

For as many documents as you are likely to ever need. We can handle over a million. And we can find information on any document in your file (even if there are a million documents) in one second.

And we're talking about documents as large as 3,000 characters, with up to 250 categories of information.

## **Smart files.**

### **Smart documents.**

### **Smart reports.**

You can get printed reports from your files six ways from Sunday. Any way you want.

And you get your documents right on the computer screen, where you can fill them in, add to them, review them, change them, or print them. Up to thirty screenfuls (pages) per document (record) if you wish.

And when your document is on a computer, it can compute. (Smart documents? You bet.) Advanced DB Master gives you forms the ability to compute as many as 100 values each (like sales tax) or to look up information (like finding the part name and part price when you enter the part number).

And that's just for starters.

(Speaking of starters, our new manual and beginners' tutorial literally walk you through the steps for getting set up and running. Easy.)

## **A system smart enough to grow with you. So you don't have to worry about outgrowing it.**

Unlike every other leading 'data base' package, Advanced DB Master is so organized, it

handles its own expansion to up to 44 diskettes. (And that's 43 more than dBASE II™ 'Visi-File,' or pfs®:FILE.)

Similar capacity advantages if you use a hard disk.

## **A new system with an impressive history.**

It is based on our best-selling DB Master™ for the Apple II®

With over 35,000 systems installed, including literally every Fortune 100 company, tens of thousands of small businesses, professional firms, schools and colleges, scientific, government, service and agricultural organizations, DB Master is now managing literally BILLIONS of records for users worldwide.

Now built from the ground up to take full advantage of the power of the new generation of personal computers.

Find out what those 35,000 DB Master users already know: we have a better way to look at information management. (It's all just a matter of having the right perspective.)

CIRCLE 830 ON READER SERVICE CARD

As we arrive at the watershed year 1984, George Orwell's vision of a society devoid of privacy no longer can be viewed as mere science fiction. In the years since Orwell penned his classic novel, *1984*, technological advances have made it possible for computerized databanks to communicate with one another—and what they're communicating about: is us.

The advent of a vast computer network storing the most intimate details of our personal and business lives has altered our notions of privacy in a fundamental way. To a disturbing degree, the computer has become "Big Brother" and those who have detailed dossiers on our lives have become our "thought police."

Though it has enhanced modern lifestyles in many ways, the revolution in information technology has exacted a terrible, unintended cost on individual liberty. This immeasurable cost is the dark side of the truly positive advances in computer science that have occurred over the last 2 decades. In a way, we have become victims of our own success.

Walter Cronkite sums up this dilemma in his foreword to David Burnham's excellent account of *The Rise of the Computer State* (Random House, 1983). "Without the malign intent of any government system or would-be dictator," writes television's venerable journalist, "our privacy is being invaded, and more and more of the experiences which should be solely our own are finding their way into electronic files that the curious can scrutinize at the punch of a button."

Unless this trend is reversed, we may soon find ourselves in a world where the ability to control public access to personal information is, for all practical purposes, a thing of the past.

### Under Surveillance

The magnitude of the problem can be gauged by the truly staggering amount of information on our lives amassed by the government and business. To an astonishing degree, Americans today are inter-

gated, watched, measured, and counted. Surveillance and electronic recordkeeping of nearly every routine activity, from bank deposits to medical visits, has produced greater efficiency and security. But it's also responsible for a discomfiting erosion of our ability to live our lives free from outside scrutiny.

The federal government currently maintains an average of 15 files on each American, according to estimates by the Office of Management and Budget (see "Report On Privacy: Who Is Watching You?" *U.S. News & World Report*, July 12, 1982). Closer to home, state and local governments use computers to keep their own files on citizens. A study conducted 2 years ago by New York State's Committee on Open Government, found that state agencies operated 1,776 separate data systems containing 10,799 categories of information about New York residents. Each system contained between two and ten million records.

In the private sector, the dossiers multiply. Retail credit bureaus maintain files on over 150 million Americans. Banks record your checks and other financial transactions. Credit card companies track your purchases and repayment patterns. The telephone company notes the numbers you have called. Insurance companies keep files of the most intimate details of your medical care, from abortions to psychiatric treatment. Taken together, these records comprise a fairly complete, if not always accurate, picture of our lifestyles, our personal tastes, our associa-

tions, and even our political beliefs.

Much of the data collected about us is necessary for the performance of a legitimate government or business function. But once the purpose for the data gathering has been served, there is scant justification for keeping this information on file.

It is important to note that most of the information maintained, including sensitive health and financial records, is gathered without any guarantee of confidentiality. Insurance companies, for example, typically require individuals to waive confidentiality as a condition of coverage. Once information is on file, experience has shown that the temptation to use it often proves irresistible. Pledges of confidentiality have been known to fall by the wayside at the mere mention of "national security" or the display of a policeman's badge. Even United States Census files, historically the most sacrosanct of all government records, were opened on at least two occasions: to track down draft resisters during the First World War and to locate Japanese-Americans for roundup into detention camps at the onset of World War II. Left to themselves to balance privacy interests against other concerns, business and government will nearly always let privacy take the fall. The phenomenon recalls Edmund Burke's warning over 200 years ago that "(t)he true danger is when liberty is nibbled away, for expedients and by parts."

### No Place to Hide

For individuals with a juvenile arrest record or a history of psychiatric treatment, the existence of these files is a ticking time bomb. Release of the information in these files can result in public embarrassment and in many cases, can lead to the loss of a job. The time when a person could move away from his or her past vanished long ago.

Even for those with "nothing to hide," the specter of computer data banks tracking one's every move has enormous impact. As the former U.S. Senator Sam Ervin, Jr. observed at a 1971 Senate hear-

ing on federal data banks, computers, and the Bill of Rights. "[O]nce people start fearing the government, once they think they are under surveillance by government, whether they are or not, they are likely to refrain from exercising the great rights that are incorporated in the First Amendment to make their minds and spirits free." In other words, the knowledge that we are being watched, that everything we do might be recorded, makes us alter the way we live, sometimes in ways we may not even perceive. After a while, conformity can become second nature. Ironically, the maintenance of computer files, which law enforcers find so useful in the detection of crime, forces everyone to look over one shoulder, just like a hunted criminal.

The argument that people with "nothing to hide" shouldn't be concerned about privacy is frequently heard. The Reagan administration used this reasoning to defend its requirement that elderly and infirm recipients of Supplemental Security Income reveal their income tax returns as a condition of receiving future benefits. People "with nothing to hide" should not object to making their tax returns public, the Social Security administrators declared. This statement drew a challenge from syndicated columnist Jack Anderson, who suggested that these officials submit *their* IRS files for review. Judging by the response, only one official had "nothing to hide."

### Ominous Developments

Of course, government dossier-building did not begin with the invention of the computer. Goodness knows, J. Edgar Hoover and his boys did an effective job of trampling on individual rights with their manually kept systems. But the relative inefficiency of index-card notes was a safeguard of sorts. The new technology, which facilitates interaction between the separate data banks of government and business heightens the potential for abuse.

Perhaps the most ominous develop-

ment of recent years is the rapid growth and nearly universal acceptance of computer-matching programs whereby one agency checks its records against another's, usually in an effort to detect fraud and waste. On a massive scale, information collected by one agency for a specific, often routine and innocuous purpose is

## Interaction between the separate data banks of government and business heightens the potential for abuse.

being used toward a far different end. Consider these examples:

- The Selective Service System cross-checks draft registration lists with Social Security and motor-vehicle records to apprehend young men who have failed to register.
- The Federal Immigration and Naturalization Service, in its effort to locate illegal aliens, sought access to the New York City Board of Education's computerized file of one million students to gather a list of Spanish surname households.
- The Internal Revenue Service matches "life-style" data maintained by various business information services with its own internal files to trigger tax audits.

Whatever the stated purposes of these computer-matching programs, the technique raises important constitutional issues regarding the presumption of innocence. Fourth Amendment protections against unreasonable searches and seizures, the right of personal privacy, and the right to protect oneself from self-incrimination.

Computer matching programs were utilized by Joseph Califano, Jr., when he served as Secretary of Health, Education and Welfare during the Carter administra-

tion, to locate federal employees illegally receiving government benefits. Within the Reagan administration, this practice has become more prevalent. With little thought to the far-reaching consequences, we have embraced this technological innovation. The only limits, it seems, are the bounds of good taste and the imagination of the controlling bureaucracy.

### Back to Basics

Ironically, the computer-matching methods used to ferret out fraud and waste are often themselves wasteful and inefficient. A 1982 New York Civil Liberties Union report makes the case that New York's Wage Reporting System—the largest state-level computer-matching program—is "an extraordinarily clumsy and wasteful operation" that "costs far more and saves far less than its proponents claim." The report suggests that less intrusive steps, such as simplifying the rules for determining eligibility and calculating benefits, could be more effective in combating abuse in public assistance programs.

These concerns regarding computer-matching, the subject of Senate hearings in December of 1982, will be the focal point of additional Congressional scrutiny in the coming months. It is increasingly apparent that the legal protections so carefully worked out in the Federal Privacy Act of 1974 have been largely outmoded by the new computer age. What is needed is creative and bold legislation to strictly limit the collection, maintenance, and dissemination of personal information. Equally important is the need for public officials with the courage to enforce it.

Supreme Court Justice Louis D. Brandeis described privacy as "the right to be left alone—the most comprehensive of rights and the right most valued by civilized men." If we care about preserving that right, we must act now. ■

*Dorothy J. Samuels, an attorney, is a former executive director of the New York Civil Liberties Union.*

# Expanding The Universe Of Learning.

Thoughtware's Management Diagnostic and Training Series is an incredible new tool that can help you to see and understand how to become a better manager. And better management will improve the operating results of your business.

The educational, economic and operational benefits of Thoughtware's computer-based Learning Programs are enormous.

**Educationally**, Thoughtware is self-paced and continuously interactive. Real situations are simulated. The animation and color graphics motivate and hold your interest. Skills are practiced until they're mastered. There's consistent quality of instruction and increased training effectiveness. And even the capability to test yourself.

**Economically**, Thoughtware reduces training time and cuts the cost of training dramatically. And the more it is used by you and those who work with you, the more cost-effective it becomes. It also eliminates travel, living and instructor costs.

**Operationally**, training fits the schedule of the student, not the trainer, thus facilitating increased usage. There's minimal job interruption as training can take place on or off site, during or after regular hours.

But the real benefits of Thoughtware lie in what Thoughtware can do for your business: Improve productivity, decrease costs, reduce turnover, improve customer satisfaction and sharpen your competitive edge.

# Thoughtware.

A New And Unique Series Of  
Personal Computer-Based Management Training Programs.

## Management Diagnostic Series

- 1.1 Assessing Personal Management Skills
- 1.2 Evaluating Organizational Effectiveness
- 1.3 Understanding Personal Interaction Styles

## Management Training Series

- 2.1 Leading Effectively
- 2.2 Motivating To Achieve Results
- 2.3 Defining Goals And Objectives
- 2.4 Improving Employee Performance
- 2.5 Managing Time Effectively
- 2.6 Conducting Successful Meetings.

***We're Willing To Give You A \$350  
Program For \$75.***

To introduce you to Thoughtware, we'll send you one of our Management Diagnostic programs, *Assessing Personal Management Skills* (which normally sells for \$350), for only \$75. Using this program, you can pinpoint and understand your own strengths and weaknesses as a manager.

To take advantage of this offer please call 1-800-THT-WARE or send a check or money order for \$75 and indicate brand name and model of your personal computer.

not at the computer. A full-screen text editor makes composing your messages easy.

You'll also enjoy the versatile telephone management system. Use it to create an unlimited telephone directory from which you can automatically call numbers according to any parameters you set: area code, city, state, etc. For people who deal with people and information—bankers, lawyers, brokers, managers, sales professionals—it will be a valuable time and money saver.

In addition, PC Express lets your IBM PC communicate with mainframes and perform DEC™ VT100/52 emulation. PC Express is also available with SNA, allowing your IBM PC to emulate a 3274 cluster controller and 327X/3770 RJE terminals. So, for the first time, you can use the problem solving powers of both micro and mainframe software.

Contact your nearest dealer for a free demonstration. For the address, call 800-523-8396. See how much further you can go and how much faster you'll get there with PC Express.

SPECIAL REPORT/JAY BLOOMBECKER

# Friend & Foe: Computers In 1984

While it is true that computers may encroach on our privacy, they may also help protect us from Big Brother.

A conventional portable computer isn't so portable.

A Hyperion portable computer is portable.

A conventional computer will take over your office.

A Hyperion keeps a low profile.

## How we designed the Hyperion for people

Our first step was to remember how a person is designed.

A person isn't designed to carry a nearly 30 lb. object that bangs against the hip and cramps the fingers. So the Hyperion is a manageable 18 lbs. and travels in an easy-to-carry tote bag.

A person isn't designed to work in the shadow of a computer. So the Hyperion

keeps a low profile.

A person isn't designed to worry about an expensive computer being dropped by baggage handlers. So the Hyperion fits under an airplane seat. Easily.

A person isn't designed with a phone attached to his ear. So the Hyperion has a telecommunications hook-up that finds numbers, dials, and makes a connection

A conventional portable isn't fit for airline travel.

The Hyperion can go with you anywhere.

A conventional computer is just a computer.

A Hyperion computer is also a telecommunications link.

## Hyperion personal computer persons.

without a person ever picking up the receiver.

And no person, no matter what design, wants to work harder than needed. So the Hyperion has all the power needed, and uses IBM® compatible software—the best and easiest to use software written.

But no matter what we say about the Hyperion, the only way to see the difference is to come in and pick one up. In person.

For the dealer nearest you call  
1-800-323-1717, Ext. 246. In Illinois  
1-800-942-8881, Ext. 246. In Canada

CIRCLE 144 ON READER SERVICE CARD

**L**ike Shakespeare's works, Orwell's 1984 begs rereading. Like the Bible, you can use it to support any number of arguments. I recently reread my high school copy and discovered both an old and a new perspective on the novel.

Some time ago a group called the Fleet Street Corporation issued a letter that read, "Dear Reader: Remember George Orwell's jolting novel, 1984? His vision of every home wired into a distant central computer with its large information banks seemed like a science fiction fantasy. Well, look up. Orwell's future is almost here . . ."

Yet nowhere in 1984 are computers mentioned. Novel "writing machines"—yes, "Speakwrites"—yes. But computers—no.

Nonetheless, it is difficult to imagine Orwell's negative utopia functioning without computerized help. How else could the information about the large population of Oceania have been monitored and correlated 24 hours a day?

How else could the ruling party have produced and kept track of all of its information? It takes lots of memory and time to keep up the kind of system depicted in 1984. In the novel, a branch of the government, the Ministry of Truth, exists to do nothing else. "Who controls the past controls the future. Who controls the present controls the past," Orwell explains.

Perhaps the use of computers to construct a single "reality," the only purpose of which is to perpetuate the ruling party would be the gravest computer crime imaginable.

But Orwell believes there's a greater evil. To him, information control is secondary to the massive assault on human dignity that 1984 represents.

#### A 1984 Without Computers

Orwell is not only saying that we must keep our information channels free from abuse. He believes that the concept of information control, if logically extended,

touches the soul of the human being. Thus the ultimate goal of the totalitarian state is the abolition of all humanity. He gives the following explanation in the text.

"We are not content with negative obedience, nor even with the most abject submission. When finally you surrender to us, it must be of your own free will. We do

### Nowhere in 1984 are computers mentioned.

not destroy the heretic . . . We convert him, we capture his inner mind . . . Never again will you be capable of love or friendship, or joy of living, or laughter, or curiosity, or courage or integrity. You will be hollow. We shall squeeze you empty, and then we shall fill you with ourselves."

This passage makes it obvious that computers are not necessary to enslave a population.

What is not so clear, however, is the extent to which the use of computers can erode our privacy and whether a sense of lost humanity will result.

Examples of computer uses that threaten privacy are not hard to come by these days. A company called National Incarceration Monitor and Control Services in Albuquerque, New Mexico, is selling microprocessor-based ankle bracelets for "correctional" use. A person in Lake County, Illinois, or the Second Judicial District of New Mexico may be sentenced to stay at home and wear a bracelet rather than take up space in a county jail. If the individual strays from home, no signal will reach his telephone, and the sheriff's office is automatically notified that a probation violation has occurred.

In a move believed to be unrelated to the impending return of Hong Kong to greater Communist Chinese control, the government of Hong Kong is experimenting with a system of electronic surveillance of automobiles as they pass check-

points along Hong Kong's major roads. Every car on Hong Kong island would be fitted with a device that would identify the car electronically to the 300 checkpoints set up to account for the use of Hong Kong's roads. A reporter for the *Los Angeles Times* called the plan "Orwellian," but government authorities claimed to be doing nothing more than applying advanced technology to Hong Kong's traffic problems.

The American Civil Liberties Union (ACLU) continues to pursue litigation against the Los Angeles Police Department's (LAPD) Public Disorder Intelligence Division. Documents released so far suggest that a private organization called Western Goals has been distributing raw intelligence obtained from LAPD about a number of people whose activities were far more easily classified as political expression than attempts to overthrow the government.

Though it is still unclear whether the organization distributed any information collected by the LAPD, it is known that the LAPD kept files on Mayor Tom Bradley of Los Angeles and a number of other prominent figures.

#### New Energy

Computers are a new form of energy. Those who take best advantage of them will gain the most power in the years to come. Though the economic and political power of large institutions or the government may help computer users to expand their power, individual users have opportunities to become influential, too.

While rereading 1984, I was struck by ways in which computers may help protect us from totalitarianism.

In the novel the Party sets out to sever each individual from all relationships that might challenge its power. Orwell describes the individuals of this society like this: "Cut off from contact with the outer world by incessant wars and limited communication facilities and with the past by information control, the citizen . . . is like a man in interstellar space not knowing

which direction is up and which is down."

Unlike the 1984 of the book, ours is marked by a growing access to information. Making "informational connections" with others throughout the world is becoming increasingly simple.

The dispersion of computer power among many users is a great safeguard to freedom of thought. Within limits, the idea that no power can completely control the means of communication is comforting. It is not without a certain smugness that I read about Rumania clamping down on typewriter ownership or learn about how difficult it is to get a computer system in Poland.

Not only can we use computer expertise to communicate with one another, but we can network, form instantaneous groups, meet, discuss, agree, and disappear before any human monitoring or intervention is possible.

Computer power is not only more dispersed, it is more accessible to all of us. The dislocation resulting from the economic importance of the computer and communications industries are forcing those with economic power to invest more in new people, new products, and new ideas. This year, 1984, offers mobility for the computer literate, and even more for the computer wizard. Many computer users are being forced to hire computer-literate people, regardless of their politics or their humanity. They may even hire people like you and me. In short, it's not always easy to tell whether Big Brother is winning or losing.

Look around you. Are the people in your office loving or friendly? Do you often feel joyous or courageous? Is the sound of laughter seldom in your ears? Contrary to Orwell's predictions, we have not lost our humanity.

More devious and more threatening than 1984 is a co-opted society, in which we sacrifice our humanity to gain the material benefits of life made easier by machines. Under either scenario, the computer can be a tool for more or less freedom, depending on how we use it. ■

# PGS did it.

With the no-compromise monitor, the Princeton HX-12, PGS set the industry standard for price/performance in a high resolution RGB color monitor.

Now, we've done it again with the SR-12: our new super-resolution RGB monitor that meets the most demanding expectations at a price that will surprise you.

And PGS has set new standards in monochrome monitors, too, with the new MAX-12 amber monitor that's as easy on the eyes as it is on your budget.

## *The monitor to meet your needs*

All three PGS monitors are engineered for no-compromise performance: to provide you with a cleaner, sharper image than any other monitor in the same price class. The HX-12 and the SR-12 both feature uncompromising color convergence for crisp whites without color bleed. The MAX-12 offers impressive clarity in a monochrome monitor with easy-on-the-eyes amber phosphor.

And all three monitors come with a shielded cable that plugs directly into the IBM PC or XT.

# And does it a

# And a

## Check the specifications

The HX-12 has the highest resolution (690x240) and the finest dot pitch (.31mm) in its class. And yet it's suggested retail price is comparable to many medium resolution monitors. The HX-12 brings no compromise color to the PC and now, with the PGS RGB-80 board, to the Apple IIe as well.

## gain.

The new SR-12 also features a .31mm dot pitch supporting 690 horizontal resolution. However, by increasing the horizontal scan rate to 31.5 KHZ, the SR-12 can support 480 vertical resolution in non-interlaced mode.

This results in a very high quality, flickerless image with the ability to generate text that is truly of monochrome quality, making it equally suitable for word processing and for color graphics. Suggested retail price, a remarkable \$799.

## gain.

The new MAX-12 offers you an amber monitor with 720x350 resolution at a suggested retail price (\$249) that is actually lower than the leading green-on-black competitor. And the MAX-12, unlike many other amber monitors, runs off the IBM PC monochrome card—no special card is required.

Clarity of the MAX-12 is enhanced by dynamic focusing circuitry which ensures sharpness not only in the center but also in the edges and corners.

A non-glare screen is standard on all PGS monitors, color or monochrome—a feature your eyes will really appreciate in a long work session.

Whatever your needs, from word processing to super resolution graphics, there's now a no-compromise PGS monitor that sets the standard. Ask your dealer for a demonstration and let your eyes decide. Or call for more information and the name of your nearest dealer.

You can look to PGS for the image your eyes deserve.

# It Reads, Writes and It Paints in 3-D, Keeps and Talks to

It's called "OPEN ACCESS," and it's the result of 60 man-years of effort to create a truly do-it-all, super-program—one that can perform virtually every task you're ever likely to encounter.

The beauty of it is, all that capability resides on a single program. You don't have to re-enter data. Or spend time trying to get unmatched programs to work together.

OPEN ACCESS takes its name from the source of its power—a relational data-base manager that gives you access to more data in more ways than any comparable software.

OPEN ACCESS includes an electronic spreadsheet, 3-D graphics, word processor, appointment scheduler and telecommunications interface—all functioning around the powerful information manager.

1

**INFORMATION MANAGEMENT—THE MASTERMIND.** This advanced data-base manager stores and retrieves multiple files quickly, easily and reliably. What's more, it shares all information with the other programs, so you never have to re-enter the same data twice.

2

**ELECTRONIC SPREADSHEET—NUMBER CRUNCHING AND GOAL SEEKING.** It helps you produce forecasts, cost estimates and "break-even" points—in seconds, instead of hours or days. Best of all, it allows "goal seeking." Ask, for example, "What sales must I have the rest of the year to net \$1 million?" and OPEN ACCESS will figure it out!

3

**3-D GRAPHICS—NOT JUST PRETTY PICTURES.** These graphics distill raw data into trends that can be instantly visualized, helping you discern the important facts from a wealth of information.

# Does Arithmetic. Your Appointments the World.

Because they do not have a dedicated relational data-base manager that can quickly direct massive amounts of data, other programs simply can't do what OPEN ACCESS can. Some don't have a communications program, others no dedicated word processor. None have a time management program.

There's just one conclusion: At \$595, OPEN ACCESS can do more for you than any other comparable business program on the market. Bar none. But the only way for you to be convinced is for you to see OPEN ACCESS work its magic on your work load. So call your local software dealer today, or call us at SPI, at 619-450-1526.

4

**WORD PROCESSING—EDITOR**  
EXTRAORDINAIRE! Superior word processors make it easy to correct typos, change words, reshuffle paragraphs and format documents. It's one of that breed. Use it to write efficient memos, letters, proposals and reports.

5

**TELECOMMUNICATIONS—YOUR LINK WITH THE WORLD.** This program gives you access to virtually any other computer system in the world. Not only can you transmit and receive reports from your colleagues, you can also subscribe to special data banks that know everything from GM's stock price to the relative humidity in Genoa. Now that's power!

6

**TIME MANAGEMENT—CONSERVING YOUR MOST PRECIOUS RESOURCE.** This module helps you keep track of all your appointments, hour by hour, day in and day out. It alerts you to standing obligations, automatically coordinates meeting times with other busy professionals, and lists all your associates on a Rotodex™-like file.

# PLATO Homelink Network

Sign up now for just... **\$15\***

All the software and instructions you need to use the amazing PLATO Homelink network, in a crush-proof package specially designed to fit next to your IBM PC. Look at what you get.

5 1/4" Flexible Disk lets you access the PLATO Homelink network from your IBM PC. Completely interactive. Just follow the instructions the software gives you—and you're on!

**Regular price \$50**

**ACCESSING PLATO HOMELINK.**  
Detailed "how-to" booklet with information on access, billing, hours of operation, on-line support.

How to use the network's word processing capabilities is all here, in **TEXT PROCESSING**.

**ROAD MAP** overview booklet explains the features that are available on PLATO Homelink.

Design graphics from simple to complex with PLATO Homelink and the **GRAPHICS DESIGN** guide.

**ELECTRONIC MAIL** tells how to use PLATO Homelink's electronic mail easily and quickly.

# Now...network your IBM PC to world-famous PLATO® educational courseware—and more. All for just \$5 an hour.

For this special low price, IBM PC users can get interactive education, authoring, electronic mail, graphics and games on the PLATO Homelink™ network. This network service of Control Data brings a world of capability right into your home in a specially-reserved time-frame, 6 p.m. to 3 a.m., every day. (7 a.m. to 3 a.m. on weekends and holidays.)\*

## PLATO BRINGS NEW EXCITEMENT TO LEARNING.

Act now to get outstanding PLATO educational courseware home-delivered, for you and your family, on your IBM PC. Choose from more than 250 titles from business simulation to medicine, mathematics and social sciences—even language and reading lessons.

## THE GRAPHICS TO GROW WITH.

With the PLATO Homelink network you get one of the most comprehensive graphics systems around. The sophisticated graphics editor lets you draw lines, boxes, circles, arcs, vectors. Generate advanced graphics, display, print, store them away and use them over and over again. Most lessons and games use these graphics to give you spectacular displays.

## UNIQUE INTERACTIVE GAMES.

Thirty advanced, interactive games so far, all delivered on your IBM PC via the PLATO Homelink network. You get "Roll 'em", "Maze War", "Chess", "Concentration" and dozens of others. You get "Moria", one of the most exciting adventure games a computer network ever delivered. And you get "Empire"—a galaxy-wide game played against other people on the PLATO Homelink network. A game so popular, so interactive, that PLATO networkers are playing it right now, while you're reading this ad.

## THE INCREDIBLE ELECTRONIC MAIL.

Bulletin boards are common. But PLATO gives you something a little bit special—and easy to use. It keeps a string of responses for each original note. You can choose to look only at unread notes and responses.

## SIGN UP NOW—PARTICIPATION IS LIMITED.\*\*

Send in the order card by March 31, 1984. You'll get the Homelink disk and user guides—with a regular price of \$50—for the limited-time price of just \$15. Then network time costs you only \$5 an hour. (There is only a \$10 annual registration fee and no monthly minimum.)

So if you have an IBM PC with 64K RAM, disk drive, 300 or 1200 baud modem, an asynchronous communications adapter and a color/graphics monitor adapter, you're just about there. You also need a monitor that will operate with your color/graphics board.

Be the first to send in the order card. You'll get what you need to link up—disk, complete instructions and your private code name and password.

Send in the order card today. Or get additional information by calling toll-free 800/233-3784; in California call 800/233-3785; or write Control Data Publishing Co., P.O. Box 261127, San Diego, CA 92126.

**A**long Apliu Street, in Hong Kong, otherwise known as Apple Street, it is not uncommon to see a variety of microcomputers sitting alongside dried squid, mushrooms, and the latest designer clothes.

This is knockoff heaven, where tourists and smugglers share the bounty of low-cost manufacturing. When visiting Hong Kong, tourists are driven by the goal of returning overseas with an "original"—from shoes to software—at a fraction of name-brand prices.

For the past few years, the computer mainstay of the street has been Apple knockoffs, some manufactured in the nearby district of Sham Shui Po. Often, they look so much like the Jobs/Wozniak original that it is difficult to tell the difference between them and the real McCoy, even though they bear nameplates such as Apolo, Golden II, Pineapple, and Orange. Others look nothing like the Apple, although a peek inside the CPU would reveal the familiar silicon guts of the usual 6502 microprocessor machine. All sell for about \$300, or whatever you can wheel and deal with the shopkeeper, whose skills would put a black marketeer to shame.

However, things are changing fast on Apple Street—so fast that the street's favorite fake now imitates the fruit of a different orchard. Judging by the number of IBM Personal Computers lining the vendors' stalls, Apple Street should be renamed PC Place.

Because of the international popularity of the IBM PC, and serious legal crack-downs by Apple on the counterfeiters in Hong Kong, the Kowloon Peninsula, and Taiwan, the newest favorite microcomputer ripoff throughout this part of the Orient has become Baby Blue. Many PCs are manufactured by companies that formerly enhanced their bottom lines by knocking off Apples. Others actually are Apple Computers reconfigured inside the IBM PC box. Still others are new dual-processor micros able to utilize the supply of software (much of it counterfeit) that also lines the stalls and gradually is sold via the

gray market in micro-markets throughout the world.

In the case of the IBM knockoffs, the situation—currently the subject of investigation by the International Trade Commission and the Subcommittee on Oversight and Investigations of the U.S. House of Representatives—has become obscured by the question of what, indeed, is an IBM counterfeit? In other words, what is proprietary in the IBM PC?

#### IBM: What, Me Worry?

The situation in Hong Kong is particularly troublesome since IBM officially denies any knowledge of any problem,

Such popular  
software programs  
as WordStar and  
dBase II are readily  
available in the  
Hong Kong street  
markets for only \$4.

even though independent reports have confirmed a proliferation of IBM PC knockoffs throughout the area during the last several months. When asked to comment on these reports, Andy Russell, a communications officer for the company's Far East Division, claimed: "They've seen what they've seen. We haven't seen any fakes here or in Hong Kong." When asked for referral to someone else within the corporation, Russell's retort was equally blunt: "I have just given you the IBM answer."

Testifying before the House subcommittee in Washington in early August, several witnesses reported an outburst of IBM PC fakes and workalikes in Hong Kong and Taiwan.

James E. Tunnell, a former employee of the Osborne Computer Corporation, told the subcommittee, "The most prevalent copies in order of availability are:

Apple-compatible computers, Osborne, and, moving toward first place quickly, IBM PC compatibles."

Adding that such popular software programs as *WordStar* and *dBase II* (including documentation) are readily available in the Hong Kong street markets for only \$4, he said he had been quoted a price as low as \$600 for a copy of the IBM Personal Computer, complete with corporate logo, a 12-inch color monitor, two disk drives, and a 256K memory card.

The domestic impact of this development became apparent following testimony from a Silicon Valley private eye who has been working undercover to investigate the influx of pirated computers into the United States—most of which trace their roots to those same stalls in Hong Kong or to the electronics factories in Kowloon or Taiwan.

The investigator, Richard Camps, vice-president of the Barrick Security Group, San Mateo, California, described an international network of counterfeiters and smugglers that was bringing bootlegged micros into this country daily and distributing thousands of them worldwide. Camps, who testified wearing a hood over his head to retain anonymity, added that several electronics firms in northern California were fronts for counterfeiters in Soviet bloc countries and in the People's Republic of China.

Camps made one comment that sent shockwaves throughout the PC community and put the issue of micro counterfeits into Boca Raton's backyard.

"Manufacturers in Taiwan are now preparing to produce counterfeit IBM Personal Computers," he testified. "We had heard for months that this was coming, but last week we saw the first counterfeit IBM motherboard."

#### The Chill of It All

The thought of fake IBM PCs being sold on the gray market throughout the United States could send a chill through anyone who is seriously looking for a PC. Could the machine that is being quoted at a

## PC PIRACY

bargain price actually be some Taiwanese knockoff, manufactured or assembled overseas by counterfeiters using fake IBM logos and bootlegged boards, CPUs, keyboards, and monitors?

Disturbingly, as of late summer IBM hadn't taken the simplest steps to stop such a potentially cataclysmic development in

**Hundreds of dual-processor machines, which can run both IBM and Apple software, already have been seen in Hong Kong markets.**

the marketplace. Calls made at that time to representatives of the U.S. Customs Service in Washington, D.C., and its Pacific Region office, confirmed that IBM had not registered any of its PC copyrights and patents with the appropriate bureau. Such registration would be used by customs investigators and agents to stop counterfeit boards and other components before they made their way, through the gray market distribution channels, into the country and onto the street. The registration costs a mere \$190.

According to Jerome Hollander, a public affairs officer with U.S. Customs, "IBM hasn't registered any copyrights with our offices, and, as a result, we have no basis for seizing any fake PCs. Even if the machine looked exactly like the PC, at this point, we wouldn't have a basis to seize it."

This information is especially troubling given the speculation that a flood of foreign-made PC workalike and lookalike machines will be entering the United States during the coming months. Many of these may be sold, legitimately, as PC compatibles, but others, with the addition of the appropriate nameplate, could be passed off as True Blue itself.

What is the basis for this speculation? For one thing, numerous IBM PC compatibles were announced at an early June computer trade show in Taiwan. Though some of the compatibles are products of companies with high-tech pedigrees, others have dubious roots in the early days of Apple and Atari game console ripoffs. Apple's experience in dealing with one company, Multitech International, an authorized IBM PC dealer in Taiwan, may serve as an example of the type of legal issues IBM could face. Multitech reportedly has developed an IBM PC compatible computer and is prepared to export it this fall to established dealers in the United States and throughout Europe. The company has developed original computer designs, including several high-level Chinese language computers. According to Albert Eisenstat, vice-president and general counsel of Apple Computer, Multitech is the defendant in a civil suit Apple has brought in Taiwan. Multitech is accused of infringing Apple's patent rights on the Apple II in production of its own home micro, called the MicroProfessor. By court consent, Multitech has agreed to change any questionable codes. Apple is checking closely to see if these codes have been changed, and for the time being the company has effectively stopped Multitech International from manufacturing the MicroProfessor.

### The Kopy Kat Kids

In his testimony before the House of Representatives, James Tunnell remarked: "It is generally acknowledged in the Asian pirate computer industry that the manufacturer who can control costs controls the IBM PC compatible market. One of Taiwan's strengths has been low-cost manufacturing because of an abbreviated product-design phase."

One working definition for "abbreviated" may come from a conversation Tunnell had with the manager of a Taiwanese manufacturer, which were turning out ersatz Apples before its products were seized by order of the court. The manager,

Lin Hsiaoichi, remarked: "When you are starting out, you have to copy something. That is the way you gain knowledge and experience. Later, you can create, innovate."

Several Taiwanese "innovations" are on their way to the U.S. market this fall, including an IBM PC compatible, with the 8088 chip, CP/M-86, MS-DOS, 256K RAM, high-resolution display, control board, and both Winchester and floppy disk drives. The product is expected to sell for half of what a similar configuration would cost if it were manufactured here. Another product spotted by Tunnell is a portable version of the IBM PC using 5¼-inch floppy disk drives.

Barry Bergman, an associate of Richard Camps at Barrick Security Group, reports he has seen a unit called the CAT 100, which works like an Apple but looks like the IBM PC. He adds that hundreds of dual-processor machines, which can run both IBM and Apple software, already have been seen in Hong Kong markets. These products make their way to American shores camouflaged in shipments of everything from canned goods to refrigerators, Bergman explained.

Since offering his testimony, Camps has spotted yet another IBM motherboard in the U.S. factory of a foreign manufacturer with a history of assembling Apple fakes.

"I don't know if they were exact duplicates," he said. "They told us they are copies of IBM motherboards, though. When we asked what they were going to do with them, they replied, 'We're making an IBM PC.'"

### What Is IBM's?

When asked what was the most important factor in keeping computer counterfeiters out of the U.S., Camps replied, "Customs." And when questioned why IBM appears to have been so lax in its registration procedures for the IBM PC, he theorized: "Possibly there is nothing proprietary they can register?"

Obviously, IBM's logo can be pro-

## PC PIRACY

tected, and this famed trademark has traditionally been defended by the company with the vengeance of a Mafia hitman. However, the question of what exactly is proprietary in the IBM PC brings attention to the fine line between an IBM PC "fake" and a "compatible." Why should some foreign manufacturers be deemed ripoff artists while domestic companies bask in the reputable aura of being compatible manufacturers?

According to spokesman Ken Price of Compaq, "The only thing that is proprietary (in the PC) is the ROM. The code on the ROM is what makes a machine compatible and not a counterfeit." However, he added that it is difficult to prove somebody has copied a ROM. "It is not something you can just look at and identify as a copy. It is difficult to get into due to traps and gates, and it would require somebody

extremely technical to read."

IBM's answer to the question of what is proprietary in the PC is assertive in tone, but vague in content: "IBM has both copyright and patent protection on numerous parts of the machine, but for obvious reasons we won't be any more specific than that."

According to Apple's Eisenstat, "Their (the IBM) machine is just an engine. The hardware has nothing proprietary in it. There certainly are no patents. Therefore, you can't counterfeit a machine that has nothing counterfeitable." He said his sources told him IBM has developed a task force in Taiwan to deal with PC piracy, although IBM wouldn't confirm the report beyond saying the company has agents at work all over the world.

Eisenstat added that the majority of

Apple's suits to date have involved manufacturers who copied the Apple machines, while selling them under different names. Apple nameplates are routinely offered on the Hong Kong markets for \$10 each. Will this be an upshot of PC piracy as well?

Bergman remarked, "Nobody in their right mind is going to voluntarily manufacture a PC compatible with the IBM logo on it. Why should they take a chance like that and suffer the wrath of the largest computer company in the world? They don't have to. Once the machines are manufactured and shipped to another country with no labels at all, nothing is going to stop somebody from pasting on the labels later. If IBM says they haven't seen any IBM knockoffs, what they must mean is they haven't seen any exact duplicates, including the IBM logo." ■

# Shift into Ultradrive with Targa™ by CMC

■ Targa is your answer for a quality, hassle-free hard disk subsystem.

■ Targa interfaces with most popular microcomputers and carries the finest limited warranty in the industry.

■ At under \$2000 (sug. ret. for 5MB), Targa is an exceptional buy in terms of price/performance.

■ Available in 5, 10, 15, 20, and 30 MB models.

# BRADY IS IBM SPECIFIC

# IBM SPECIFIC BOOKS

Books by The Brady Co. were written specifically for your IBM PC\* to help you make the most of this magical machine, while demystifying the process.

With great care, The Brady Co., a division of Prentice-Hall, has assembled the authors and the experts who write what we publish to make the most of the software for your IBM hardware.

Whether you work with your IBM PC\* at home, or in the office, using it as a toy, a tool, or a corporate aide, we have the books to enhance the personal relationship you have formed with your IBM PC. Since the technology changes quickly, you can expect The Brady Co. to add new titles and update older editions, to keep you current with the latest IBM PC applications.

The Brady Co. already lists some titles which have become classics, some best sellers and some "hot off the presses." And, as with all Brady Books, we guarantee you a good read with good information. Be sure to buy something substantial, specifically for your IBM PC—books by The Brady Co. We're in business to provide the personal library for your personal computer.

## BEST SELLERS

**Peter Norton: Inside the IBM PC: Access to Advanced Features and Programming**

The most widely-read author on the IBM PC gives the reader a look inside the workings of the computer and the advanced features it can provide. This best seller includes the fundamentals of the microprocessor, the operating system and the PC-DOS. In a very readable book, Peter Norton takes you beyond the machine, interprets its languages for you and introduces you to ROM.

1983/320pp/paper/ISBN 0-89303-556-4/\$19.95  
Book/Diskette Package ISBN 0-89303-561-0/\$29.95

**Peter Norton: MS DOS and PC DOS: User's Guide**

The authority, Peter Norton gives an introduction and explanation of the Microsoft Disk Operating System, precisely right for the beginner. It provides examples and instructions unavailable in any other volume.

1983/256pp/paper/ISBN 0-89303-645-5/\$15.95

**Larry Joel Goldstein: Advanced BASIC and Beyond for the IBM PC**

A complete guide to the advanced skills of BASIC programming, files, graphics, event-trapping, machine language and subroutines. This book by the master teacher is an absolute must for the IBM PC Programmer.

1983/600pp/paper/ISBN 0-89303-324-3/\$19.95  
Book/Diskette Package ISBN 0-89303-325-1/\$39.95

**Leo J. Scanlon: IBM PC/XT Assembly Language: A Guide for Programmers**

An introduction to the fundamental principles of microprocessors (specifically the 8088), numbering systems and assemblies. The book first outlines the steps necessary to create and run assembly programs and then describes the entire instruction set of the 8088 microprocessor.

1983/384pp/paper/ISBN 0-89303-241-7/\$19.95  
Book/Diskette Package ISBN 0-89303-242-5/\$49.95

## A CLASSIC

**Larry Joel Goldstein, Martin Goldstein: IBM PC: An Introduction to the Operating System, BASIC Programming and Applications, Revised and Enlarged.**

An updated and expanded version of what has become the classic self-study book for the IBM PC. New chapters on BASIC emphasize the importance of structuring and planning programs and important new information on debugging. Games and graphics are included and the section on random access has been expanded.

1983/448pp/paper/ISBN 0-89303-530-0/\$17.95  
Book/Diskette Package ISBN 0-89303-527-0/\$39.95

## A FIRST!

**Kevin Bowyer, Sherryl Tomboulain: Pascal for the IBM PC: IBM DOS Pascal and UCSD P-System Pascal**

This is the first written word on combining the IBM PC and Pascal Programming. Soon it will become the last word for anyone who wants to break the limits of BASIC programming with an emphasis on graphics and sound applications.

1983/320pp/paper/ISBN 0-89303-280-8/\$17.95

**Barbara Lee Chertok, Dov Rosenfeld, James Stone: IBM PC & XT Owner's Manual: A Practical Guide to Operations**

This entry level book provides easy instructions on the operations of the IBM PC. After reading this new guide with clear, concise examples, the user is up and running on the IBM PC in a minimum amount of time—without programming classes.

1983/128pp/paper/ISBN 0-89303-531-9/\$14.95

**Larry E. Jordan, Bruce W. Churchill: Communications and Networking for the IBM PC**

This book brings together data communications applications and the IBM PC. It includes asynchronous and synchronous communications and a complete study of local area networking. A full chapter on communication codes and controls is included to demystify the language.

1983/225pp/paper/ISBN 0-89303-385-5/\$18.95

## IT'S BASIC

David Schneider: **Handbook of Basic for the IBM PC**

This book for the layman presupposes no knowledge of BASIC and clearly translates the BASIC reference manual supplied with the IBM PC into completely comprehensible terms. Organized by BASIC programming statements, it allows the user to go directly to the desired information without confusion or delay.

1983/350pp/paper/ISBN 0-89303-506-8/\$19.95  
Book/Diskette Package ISBN 0-89303-508-4/\$39.95

## NEW

Richard Startz: **8087 Applications and Programming for the IBM PC And Other PCs**

New on the shelves and on the minds of 8087 microprocessor users, the pages begin with a non-technical introduction and turn into very detailed technical descriptions of the potential application. It includes sections on Advanced Instruction Set, Non-linear methods, Statistical Analysis and Program Canning.

1983/250pp/paper/ISBN 0-89303-420-7/\$19.95

## SCIENCE

Philip Wolfe, C. Patrick Koelling: **BASIC Engineering and Scientific Programs for the IBM PC**

A source of BASIC Programs written exclusively for on-the-job use by engineers and scientists to provide important computer techniques for problem solving and data manipulation.\*

1983/320pp/paper/ISBN 0-89303-330-8/\$19.95  
Book/Diskette Package ISBN 0-89303-331-4/\$39.95

## BUSINESS

Leon Wortman: **Business Problem Solving with the IBM PC & XT**

Business professionals will make use of the dozens of computer programs specifically designed for problem solving and decision-making. Source codes are included in BASIC, with many in PASCAL.

1983/350pp/paper/ISBN 0-89303-282-4/\$19.95  
Book/Diskette Package ISBN 0-89303-342-1/\$49.95

Steven Zimmerman, Leo Conrad: **Business Applications for the IBM PC**

First time users will find this guide to the IBM-PC ideal. It offers step-by-step instructions on the use and customization of existing business software programs.

1983/350pp/paper/ISBN 0-89303-243-3/\$17.95  
Book/Diskette Package ISBN 0-89303-351-0/\$49.95

## HOT OFF THE PRESSES

MicroWorkshop: **Wordstar for the IBM PC**

Now, the incredible Wordstar can be mastered with this step-by-step journey through its many features. From the fundamentals to managing more complicated commands, this book explains it all in an easily understood style that won't lose the beginner or bore the more advanced user.

1984/224pp/paper/ISBN 0-89303-996-X/\$17.95

## GRAPHICS

Dorothy Strickland, Dennis Rockwell, and Kevin Bowyer: **Games, Graphics, and Sound For the IBM PC**

This guide for the beginner teaches programming in BASIC, Pascal and FORTRAN to create graphics and sound for the IBM PC. It illustrates in 70 working examples how to integrate sound and graphics into animation. And, it includes an example of how to create a simple video game.

1983/288pp/paper/ISBN 0-89303-469-X/\$18.95  
Book/Diskette Package ISBN 0-89303-470-3/\$44.95

# IBM SPECIFIC GAMES

The Brady Company, a division of Prentice-Hall, believes that all work and no play makes a dull PC. To brighten those leisure hours for you and your machine, we have created toys and games that are IBM sPCifically for fun.

The Brady Co. sends out scouts who have the difficult assignment of discovering and playing the new games being created in basements and in computer centers across the country. These games originate with computer whiz kids and senior wizards and it's the job of The Brady Co. to discover and provide the best games IBM sPCifically for you and your IBM PC.\*

## Cosmic Nightmare Hi-Tech Gameware

You are on the earth's only atomic power asteroid—everyone else has evacuated! Suddenly, the earth's core sends up shattering explosions and your worst nightmare is now reality. All the phantoms of the universe are coming. Their awful mission is to make the earth one vast ghost town. Can you prevent this nightmare from occurring?

ISBN 089-303-699-3/\$29.95

## Nomination ICCS

One to five players run against the actual candidates for the 1984 Democratic nomination in 6 primaries. Take a stand on the issues, toss your hat in the ring and make your dream come true.

Run as a conservative, a liberal or sit on the fence in five primaries. Grant interviews to the press and issue position papers on such sensitive issues as welfare, the nuclear freeze and passage of the ERA. Strategy is the secret to winning the coveted NOMINATION.

ISBN 089303-699-4/\$29.95

## Lasercycle Cornerstone Computer Company

In your Lasercycle, you suddenly surge forward into the center of the first Arena. Walls of destructive energy confine you to the racing circuit. A deadly attack sphere blazes toward your cycle. To survive, you must destroy it quickly, before it destroys you!

Lasercycle requires rapid acceleration and extraordinary steering in racing from Arena to Arena. You must conserve your energy reserves and absorb Power Pods when you can. Your acceleration booster has lightning speed and your cunning maneuvers will save you for the next race to survive!

ISBN 0-89303-619-6/\$29.95

## Darius IV Diversion Games Division

A fast-paced, skill and action game where reflexes and common sense are tested every second of play. Darius IV offers all the challenges of an arcade space game. The player must avoid air mine fields, cannons and the deadly "air snakes" while locating one of 15 possible landing sites on the planet of Darius IV. Treasure is the goal and escape is the final achievement until all 15 areas are conquered.

ISBN 0-89303-398-7/\$29.95

The Brady Co. books and games listed above were created sPCifically for your IBM PC. These and many others are now available at Computerlands, IBM Product Centers, Sears Computer Centers, Entré Computer Centers, B. Daltons, Waldens, Crown Books and other fine bookstores and computer retailers.

If you are unable to find the book or game of your choice, call toll free for information (800) 638-0220.

# PC-DRAW, The Original High Resolution Drawing System for the IBM PC. Now with Color and Plotter Support!

**Optional Light Pen Supported**

Reduce costly and time consuming preparation/revision of charts, diagrams and other Business Documentation. With PC-Draw's user definable symbol menus, extensive Graphic Functions, Multiple Text Fonts and Predefined Symbol Menus\* you can Create, Maintain and Print virtually any type or complexity of drawing.

PC-Draw will help you achieve immediate productivity gains in the following application areas:

- Flowcharting
- Organizational Charts
- Forms Design
- Office Layouts
- Warnier/Orr Charts
- Architectural Design
- Mechanical Design
- Electrical Design
- Yourdon Structural Analysis/Design
- And other Drawing Applications

\*Three predefined symbol menus come with PC-Draw. They are: Software Design, Electrical Design and Alternate Text.

## **PALANTIR™ WORD PROCESSING**

# **WE DON'T HAVE TO BEEF UP OUR GUARANTEE WITH A LOT OF BULL**

Other software companies give you disclaimers. Palantir gives you a real guarantee: Palantir backs its software with 90 days of free phone support via a toll-free number. When you call, we won't tell you to ask your dealer or read your manual; we'll answer your question, free of charge. If we can't solve your problem, we'll replace your Palantir Software with any competitive software of comparable value.

We couldn't make an offer like this if we weren't confident about Palantir word processing. It's easy to learn, easy to use, easy to live with.

Palantir word-processing software is designed for microcomputers. Yet it gives you all the features of a dedicated word processor. You won't find a better system on the market today.

To find out more about Palantir software, mark the reader-service card

in this issue or call, toll-free: 1-800-368-3797. In Texas, call 713-520-8221.

We'll respond with detailed information on Palantir software and a free "No Bull" button. A closer look will convince you that we're not just one of the herd. And that's no bull.

# TWICE AS MUCH SPEED. 100% MORE CORRESPONDENCE.

To get as much from an IBM printer,  
you'd have to buy two.

**Compare. Compare.** Compare performance characteristics between Okidata's outstanding ML 92 and 93 printers and the IBM 5152 Model 2 printer, and you'll quickly find there is no comparison. For a few dollars more, the Okidata ML 92 and 93 offer three high speed modes: 160 cps bidirectional data processing (complete with short line seeking logic); 80 cps emphasized and enhanced printing for drafts; 40 cps for high resolution correspondence quality printing and other business communications. And complete graphics capabilities that are over 50% faster than IBM.

The IBM 5152, on the other hand, offers 80 cps data processing and no correspondence quality whatsoever. Your choice? An 80-column ML 92 or its 136-column partner, the ML 93, for all your DP, graphics and correspondence needs. Fast. Or, an IBM 5152 and something else (a daisywheel, perhaps?). Without the speed you need.

**Plug 'n Play Makes It Easy.** Because we've created the Okidata Plug 'n Play interface kit, your Okidata printer is perfectly compatible with your IBM computer and software without modifications. Here's how simple it is:

- Two replacement PROMs adapt the ML 92 and 93 to all IBM commands.
  - An optional cable links computer and printer to provide instantly-responsive 160 cps bidirectional speed for DP, 80 cps for drafts, or 40 cps for correspondence quality.
- That's that. In addition, you get Okidata's built-in printer reliability in the form of our long-life, 9-pin print head warranted for one full year, and a 4000 hour MTBF and 15 minute MTTR rating. Plus a 90-day warranty on parts and labor. And a warranty claim rate that's a leader in the industry: less than 1/2%.

**Liberate Your Computer.** Don't limit the power of your IBM PC with a printer that can't keep up. Ask for a demonstration of the ML 92/93 and Plug 'n Play winning combination.\* Phone 1-800-OKIDATA (In NJ, 609-235-2600) for the Okidata dealer nearest you.

# For The Handicapped: Toggling Shift Keys

A short BASIC program called Handicap.COM gives handicapped users greater access to the IBM PC keyboard.

**A**t the beginning of August, I wandered into ComputerLand in Salzburg, Austria, to buy the latest copy of *PC*. The June issue had just arrived from the States. It included a letter to the PC Tutor from Dal Vordahl, who is a handicapped IBM PC user. He was looking for a way to convert certain keys on the PC's keyboard into toggles that would allow handicapped users who are unable to press two keys at once to use the Shift, Ctrl, and Alt keys.

It sounded possible, and the PC Tutor even suggested two solutions. But the first suggestion, to check the shift keys 18.2

times per second using the clock interrupt, isn't very reliable. And the second, to rewrite the IBM PC's keyboard input procedures, would take a fair amount of work and the patch would be fairly long—certainly too long to publish.

I thought about other ways to change the shift keys to toggle on and off, and one night I suddenly hit upon a solution. But by then I had run out of time in Salzburg. The summer was dwindling and it was time to pack my Compaq and my clothes and head back to my normal, hectic life in upstate New York. I left my summer retreat in the Austrian Alps, with the book

## TOGGLING

I'd been working on nearly finished, and began to earn a normal living again.

Back in the States, I finally found time to write a BASIC program to build a DOS patch to change the meaning of the four shift keys. You don't need any knowledge of machine language to use this program, called Handicap.COM, to patch DOS. Even if you're not looking for a keyboard styled for the handicapped, you might be intrigued by the subtle trickery possible with machine language programs.

### Inside the Keyboard

ROM chips contain programs we can use but can't change, including the Basic Input Output System (BIOS), a set of subroutines DOS uses to talk to the keyboard, the display, the disk drives, and other hardware. Each time you push or release a key, the keyboard sends a signal to the 8088 microprocessor. This signal, known as an interrupt, causes the 8088 to take a "time-out" from your program to run one of the subroutines stored in the ROM BIOS. This subroutine converts the keys you press into ASCII characters that BASIC and other programs read. It also stores other information in memory, such as which shift keys are currently pushed down.

The BASIC program in Figure 1 continually monitors 4 bits in the memory location used by the ROM BIOS subroutine to store information about the four shift keys: Ctrl, Alt, and the left-hand and right-hand shifts. This program displays a 1 for any key you're holding down—or that it thinks you're holding down. What's that? Does that mean you can fool the keyboard interrupt subroutine into thinking you have the right-hand shift key pressed when your hand is nowhere near the keyboard?

It sure does. Adding the BASIC instruction

```
5 DEF SEG=0 : POKE
  &H417, (PEEK(&H417) OR 1)
```

to the program in Figure 1 turns on the right-hand shift key, so that any characters

you type will be shifted. The right shift key will be released only when you push and release the right-hand shift key.

The keyboard sends one code when you push a key and another when you release the same key. So the ROM BIOS interrupt subroutine knows when you actually push or release any key. When you push the right-hand shift key after executing the POKE instruction above, the

into memory whenever you reset (Ctrl-Alt-Del), so you'll have to run Handicap.COM after you do a reset; you can do this by placing it in your Autoexec.BAT file.

Handicap.COM changes the shift keys so that they stay on for the next character you type. So if you push the left-hand shift key, the "a" key, and the "b" key, in that order, you'll see "Ab"; Handicap.COM

```
10 CLS
20 DEFINT A-Z
30 DEF SEG = 0
40 FLAGS = &HF AND PEEK(&H417)
50 LOCATE 10,20
60 IF (FLAGS AND 8)<>0 THEN ALTFLAG=1 ELSE ALTFLAG=0
70 IF (FLAGS AND 4)<>0 THEN CTRLFLAG=1 ELSE CTRLFLAG=0
80 IF (FLAGS AND 2)<>0 THEN LEFTFLAG=1 ELSE LEFTFLAG=0
90 IF (FLAGS AND 1)<>0 THEN RIGHTFLAG=1 ELSE RIGHTFLAG=0
100 PRINT "Alt:";ALTFLAG;" Ctrl:";CTRLFLAG;
110 PRINT " Left:";LEFTFLAG;" Right:";RIGHTFLAG
120 GOTO 40
```

**Figure 1:** This BASIC program continually tests the four shift keys and displays a 1 for each key pushed down.

right shift bit is already turned on, so the ROM BIOS subroutine leaves it on. Only when you release the right shift key, sending a key-release signal to the 8088, does the ROM BIOS subroutine turn off the right shift bit. Handicap.COM uses this sort of information to change the meaning of the four shift keys.

### Building Handicap.COM

The BASIC program in Figure 2 builds the machine language program Handicap.COM on your disk using the DATA statements. The source code for Handicap.COM is shown in Figure 3. These numbers are instructions to the 8088 and are known as machine language because they have meaning to the 8088 microprocessor, but not to us.

When you run Handicap.COM, it attaches itself to the end of DOS in memory and intercepts all interrupts for the keyboard. Handicap.COM increases the size of DOS by about 400 bytes, but this only affects the copy of DOS in memory. A fresh, unmodified copy of DOS is loaded

turned off the shift key after you typed "a." This scheme works well for most keys, but there are two exceptions. The first has to do with using several shift keys in a row, as in Ctrl-Alt-Del. Handicap.COM watches to see if you have pushed another shift key, and it doesn't turn off any of the shifts until you hit some other key, not a shift key. If you hit the same shift key twice, though, Handicap.COM turns it off the second time.

The second case occurs when you use the Alt key in conjunction with the numeric keypad. The ROM BIOS subroutines allow you to enter a number by holding down the Alt key while you type the number of a character on the keypad, and this character appears when you release the Alt key. The Handicap.COM program recognizes when you are using the Alt key with the number keypad, and keeps the Alt key turned on until you push and then release the Alt key a second time. The character is sent when you release the Alt key for the second time.

Handicap.COM intercepts keyboard

Figure 2: The BASIC program GENHAND.BAS to build HANDICAP.COM

interrupts so that it is in control, rather than the ROM BIOS subroutine, whenever you press or release any key. But to avoid repeating much of the work done by the ROM BIOS subroutine, Handicap.COM merely delays the call and does a small amount of work both before and

after the ROM BIOS subroutine does its job. This is the magic behind Handicap.COM—it watches the bits for the four shift keys to see if they change between the time Handicap.COM calls the ROM BIOS subroutine and the time it receives control again, which occurs when the

ROM BIOS subroutine issues a return.

Ordinarily, Handicap.COM turns a shift key back on whenever you release a shift key—that is, whenever the ROM BIOS subroutine changes a shift bit from 1 to 0. But when you push another key,

## Protect and Organize

### YOUR FLOPPY DISKS WITH MINI-EASEL BINDERS AND PAGES... and save 23%!

Scratched or damaged floppies can waste hours—even days—of carefully stored documents. Now there's no need to worry... you can protect all your disks in clear vinyl pages and folders them for rugged, accident-free storage. This compact binder comes with 20 protective pages to hold 5 1/4" disks. Each page has an extra pocket with a file card for disk identification. The binder opens to become a self-standing easel to hold disks and 3-hole punched 5 1/2 x 8 1/2" sheets at an easy-to-view angle. Closed, it stores compactly on a shelf or in a drawer.

**SAVE 23%!** Mini-easel binder with 20 pages and cards. Color: Black. Stock #SFDRM... A \$20.25 value

## TOGGLING

Handicap.COM turns off all the shift keys after the ROM BIOS subroutine has placed a shifted character into the character buffer read by DOS. The shift key stays on for only one character.

In the case of consecutive shift key use, pushing and releasing the first shift key causes Handicap.COM to turn this shift key on again. When you push another shift key, Handicap.COM notices that it was a shift key, not a normal key, so it doesn't

Handicap.COM can go a long way toward helping handicapped PC users get the most out of their computers.

turn off the first shift. Handicap.COM allows you to turn on all four shift keys at the same time provided you don't push any shift key twice or any non-shift key. If you do either, Handicap.COM will turn off all four shifts.

In the other special case, which involves using the Alt key and the numeric keypad together, the ROM BIOS subroutine uses an address in the lower part of memory, 419 hex, to store the character as it's being built from the digits. If you type Alt-3-5, memory location 419 contains 3 after you push the 3 key and 5 after you push the 5 key. Then 419 becomes 0 as soon as you release the Alt key. This means the memory location 419 is a non-zero number only when you are using the Alt and numeric keys to input a character. Handicap.COM watches this memory location, and if it is not zero, it doesn't change the shift bits.

This is Handicap.COM's complete bag of tricks. It is a fairly short and reasonably straightforward program, but it goes a long way in helping handicapped PC users get the most out of their computers. ■

# Effortless Communication

## PC Modem Plus & IBM Personal Computer

**Effortless Communication** The PC Modem Plus™ is all you need to link your personal computer to the world. Everything is included: internal modem, software, telephone cable and instructions. The modem card fits right inside the PC and connects it to the phone line. No more messy clutter in the work area. The software makes communications a snap—a single key-stroke connects you to any computer, anywhere.

**The Best Modem** The PC Modem Plus™ System provides features and flexibility no one else offers. Like an additional serial port for your printer and an extra telephone connector which lets you switch between voice and data. The PC Modem Plus™ even connects to your PC's speaker so you can hear the call being made.

The modem is available in both 1200/300 and 300 baud speeds. You can even upgrade the 300 baud version—it's as simple as adding the PC Modem Speed Adapter™. And at both speeds, the PC Modem Plus™ provides full duplex operation, auto-answer/auto-dial, and tone or pulse dial.

**The Best Software** The PC Modem Plus™ System comes complete with CROSSTALK-XVI™. This powerful communications software makes it easy for you to automatically dial a number, store data directly onto disk, or exchange files with minis, mainframes or other microcomputers.

**Ven-Tel Inc.** 2342 Walsh Avenue, Santa Clara, CA 95051

# WHEN YOU'RE READY OUR PC PLUS KIT WILL BE WAITING

## 10mb Internal Upgrade

When you're ready to boost your storage capacity from 640K to 10mb without boosting power and without eating up desk-top space, our internal PC PLUS will be just a phone call away.

Waiting to give you all the capacity of the \*XT at a price that saves you hundreds of dollars compared to the cost of trading up.

The DSS PC PLUS kit uses a half-height 10mb Winchester disk drive that gives you all the benefits of Winchester technology — increased data integrity,

faster access — without taxing the power supply. It also includes a Winchester disk controller that is IBM formatted.

The DSS PC PLUS kit presents the storage solution you need now. What are your data storage needs? At DSS, we do much more than sell components. We create solutions.

The DSS PC PLUS kit includes:

- 10mb half-height disk drive
- DSS Controller
- Full height front bezel
- Mounting hardware
- Cables

### Features and Benefits

- Increased capacity
- Increased access time
- Upgradeability
- No additional power requirements
- Enhanced cooling
- One board controller solution
- Operates with 1.25 MS-DOS through 2.0 MS-DOS
- Internal upgrade
- 1 10mb half-height Winchester = 31 floppy's
- Increased data integrity

**Retail price: \$2250**

# What IBM™ won't tell you.

When it comes to manuals, IBM makes terrific computers.

But working your fingers to the bone soon takes the bloom off the rose.

So we've taken everything that you might even *think* you want to know about the IBM PC and compatible products and assembled it in one place.

## The IBM PC Reference Encyclopedia.

This Second Edition of our Encyclopedia is two volumes jam-packed with information that gives you the meanings behind the manuals and keeps you current on compatible software and hardware products.

Inside, you'll find several thousand quick reference entries and over a hundred in-depth "how-to" items.

We'll tell you everything you need to know about DOS, (including 2.0). We cover the PC and the XT™ so thoroughly you won't need to buy the Technical and Hardware manuals. We detail topics like disk organization, printer control and more. Review IBM and non-IBM programs and add-ons realistically so you don't get trapped in the software/hardware jungle. And show you dozens of other ways to get the most out of your PC.

We've compiled tables and comparisons you won't find anywhere else. Gathered hundreds of practical tips and techniques from magazines, newsletters and dozens of experienced users, so you won't have to learn them the hard way.

### It's easy to take.

We've made all this information easily accessible, because the Encyclopedia is efficiently indexed and thoroughly cross-referenced.

It's all explained in plain English with enough depth for both novices and experts.

We update it twice a year, to keep you up to speed on all the new developments.

And it's all yours for a suggested retail price of just \$69.95.

Including 1 year of free updates.

So pick up a copy of the Ashton-Tate IBM PC Reference Encyclopedia (Second Edition) at your nearest computer or software store.

And stamp out manual labor today.

Ashton-Tate, 10150 West Jefferson Boulevard, Culver City, CA 90230.  
(213) 204-5570.

CIRCLE 499 ON READER SERVICE CARD

# PRO-MODEM 1200

## It's about time.

Time for your computer to make the telephone connection — with an intelligent, full 212A 300/1200 baud modem — with a real time clock/calendar — and with the capability to expand into a complete telecommunications system. It's time for PRO-MODEM 1200. Much more than just a phone modem.

When you're on-line, time is money. PRO-MODEM telecommunication systems help you save. By monitoring the duration and cost of your phone calls. And by sending and receiving messages, unattended, at preset times when the rates are lower... with or without your computer.

Compare the \$495 PRO-MODEM 1200 with any other modem on the market. For example, you'd have to buy both the Hayes Smartmodem 1200 plus their Chronograph for about \$950 to get a modem with time base.

PRO-MODEM 1200 is easy to use. A convenient "Help" command displays the Menu of operating command choices for quick reference whenever there's a question about what to do next. Extensive internal and remote self-diagnostics assure that the system is operating properly. Some of the other standard features include Auto Answer, Touch Tone and Pulse Dialing, and Programmable Intelligent Dialing.

PRO-MODEM does more. It lets you build a full telecommunications system with features like Auto Dialer, Incoming and Outgoing Message Buffering, Business/Personal Phone Directory, Programmable Operating Instructions, a 12-Character Alpha-Numeric Time and Message Display, and versatile PRO-COM Software. PRO-MODEM commands are Hayes compatible so you can use most existing telecommunications software without modification.

There's much more to the PRO-MODEM story. See your local dealer for complete details. He'll show you how to save time. And money.

Prometheus Products, Inc., 45277 Fremont Blvd., Fremont CA 94538, (415) 490-2370

# PROMETHEUS

# An End To Mailing List Madness

One of the duller office tasks for a secretary—typing lists of names and addresses for mass mailings—becomes a breeze with a PC and a mailing list program.

**H**ave you ever had to type a list of names and addresses? Have you ever had to type the same list twice? For little more than the cost of a carton of the old triplicate mailing label forms, you can invest in a simple mailing list package and save a lot of time and frustration. Invest a little more and you can add database management functions that go far beyond mailing list capabilities. With the help of the computer, you can sort your mailing list by name, zip code, or city, and you can select addresses from the list by almost any category.

## Killing Clerical Doldrums

One of the most mundane office tasks has to be the preparation of mass mailings. Even a mailing to only 100 people repre-

sents a lot of work each time. And even typists who are speed demons quickly get bored.

Computers are well-suited to performing repetitive, mundane tasks. They never get bored. So it makes sense that one of the first things any office or group should computerize is its mailing list.

The three packages reviewed here represent the full range of currently available mailing list programs. Peachtree's *Mailing List Manager* is sold by Peachtree and by IBM as part of the IBM Professional Computing Series. The program lists for \$250, but, if you wish, you can buy it as part of the \$395 PeachText 5000 System, including *PeachText* Word Processor, *PeachCalc*, the *Random House Thesaurus*, *Peachtree Spelling Proofreader*, and

of course, the *Mailing List Manager*.

Running a close second in performance is *Personal Mailer* by Computer Age of San Francisco. It packs in 90 percent of Peachtree's *List Manager* at one-third the price. Finally, *Name/Address Mailing* by McCullar Microcomputing is an inexpensive package that may be just right for the modest user.

Peachtree's *Mailing List Manager* is by far the slickest of the lot. The packaging is typical IBM, well-organized and easy to read. Almost half the manual is an eight-chapter tutorial. I like tutorials; they avoid a lot of theoretical chatter and let the user dive in, one of the quickest ways to really learn this computer stuff. The keystrokes required are printed in green and stand out from the text, so experienced users can

## MAILING LISTS

### **Mailing List Manager**

Peachtree Software Incorporated

(817) 455-2598  
**List Price:** \$49.  
**Requires:** 64K RAM, PC-DOS, 80 column display.

CIRCLE 705 ON READER SERVICE CARD

enter the data, watch their screens, and learn practically everything they need to know without having to read the text between the lines. It takes about 2 hours to go through the tutorial, and it's well worth the time. It moves along at a steady clip and provides a comfortable mastery of the program. Finally, it is also fairly easy to reference.

Entering names into *Mailing List Manager* is easy. The opening menu will look familiar to *PeachText* users; to select any of the menu choices, you type in the two-letter code that represents that choice (see Figure 1). *Mailing List Manager* also makes extensive use of preset values, so you can respond to many prompts simply by pressing the Enter key. You can use

Figure 1: The opening menu for Peachtree's Mailing List Manager.

Figure 2: Entering names in Mailing List Manager.

either the function keys or the numeric keypad for moving the cursor around.

### **Defining An Address File**

The first step in setting up *Mailing List Manager* is to define an address file. You can define up to 14 different items of up to 76 characters each. After you define each item by giving it a name and indicating its length, you are asked to show which fields you want your records to be indexed on. *Mailing List Manager* creates separate files for each index. Searching files with these indexes is fast, as they are always kept in indexed order and don't have to be sorted each time you process them. The

last step in defining an address file is reserving disk space for it. The manual suggests that you reserve the entire disk, and indeed you should; who knows exactly how many records are going to be in a file? But once you have reserved the disk, you can't change your mind. If you do, it's tough luck.

Once you've defined what your address file is going to look like, you're ready to enter names (see Figure 2). (I found it hard to adjust to pressing the down arrow or F10 key after entering each item; I was used to pressing the Enter key. Fortunately, if you do press the Enter key it's just a couple of keystrokes to get back to where

## MAILING LISTS

you were.) You can set assumed values; for example, enter the city name and it will automatically insert it for you until you

### Finding records within a file is a snap, and you don't have to be exact about spelling.

change the assumed value for that field.

Finding records within a file is a snap, and you don't have to be exact about spelling. *Mailing List Manager* finds the closest possible match and you can start scrolling through the file from that point, though you can only move one record forward or backward at a time. You can search for records with any of the three indexes.

So far, you say, so what? But there's more here than meets the eye. One of the menu choices looks unassuming enough: CA for "Combine Address Files." But what you can do with this feature is truly amazing—merge records from one file into another file with a different format. For example, you may have one mailing list that contains name, address, and phone number for each customer, and a second file that contains a list of names and phone numbers only. With this feature you can easily add all the names and phone numbers in the first file to the second file.

It gets better. The most exciting menu feature by far is "Define Label" (DL). Under this option, you create and store formats for the mailing you will be printing out. First you define a label with a verbal description, including the number of lines and the width. If you have an IBM or Epson printer, you can choose which font you want to use from a set menu of choices.

Now the fun part. A blank label is drawn on the screen for you, and you can position each item where you want it on the label (see Figure 3). A "Test Print"

option allows you to send your mock-up to the printer. If you don't like the looks of it, or if the addresses don't print exactly where the labels will be, it's easy to reposition items. The possibilities are limitless. Not only can you print out traditional mailing labels, you can also print lists of names with phone numbers only, lists of products with quantity and product numbers, lists of zip codes with purchase categories. . . . Once you start using *Mailing List Manager*, you'll think of all sorts of applications for it. You won't be able to avoid coming up with new ideas.

### Finishing Touches

Once a label format has been defined, the "Produce Mailing" option allows you to print out your file of names in the format you've designed (see Figure 4). You can choose three different fields to have *Mailing List Manager* sort on, in ascending or descending order. You can choose to "Reverse halves at comma" on an item: You can enter a name with the last name first for indexing purposes but print it out first name first, without creating a separate field for the first name.

The last step is to define the mailing profile. The default profile will "Include all records," but you can direct the program to print out only parts of your mail-

ing list. You build statements phrase by phrase; for example, you can tell the program to:

Include all records for which

Name equals or is greater than B

and Name is less than G

and Zip equals 60606.

Now you're ready to print out labels. With the variety of options available, it should be a snap to make the snazziest labels around.

While *Mailing List Manager* has some flashy features, *Personal Mailer* is, in my opinion, the best for the money. It does just about everything the Peachtree package can do, except combine two different files. And it does something that Peachtree's package cannot do: It converts the data you've entered into comma-delimited ASCII files that you can use with almost any word processing package. You can use *Personal Mailer* to create and print out mailing lists, and use *WordStar* with *Mail-Merge* to write form letters. In my book, this feature makes the package worth a million by providing the kind of flexibility that all software packages will eventually need to have. Incompatibility among packages is a chronic problem that contributes significantly to computerphobia, and I predict that smart software companies will begin to create products that can

Figure 3: Mailing List Manager lets you position mailing label elements exactly where you want them.

## MAILING LISTS

Figure 4: The "Produce Mailing" menu from Mailing List Manager.

Figure 5: Personal Mailer's Utility Program menu.

Figure 6: Personal Mailer's main menu.

be used with all kinds of packages, even those manufactured by other sources.

*Personal Mailer* consists of two main segments that are interactive. The Utility segment allows you to set up your initial file, change the length of the records, convert your files to ASCII format, sort the file, and write the sorted file to ASCII format (see Figure 5). The menu requires you to press one of the function keys to choose an option. Filename prompts appear; other prompts require only a single keystroke. Setting up a file is easy. You can define up to 11 items, each up to 68 characters long. You can choose the name and length for each field or choose *Personal Mailer's* defaults by pressing the Enter key, use some combination of the two.

### Personal Mailer's Features

The second segment, called "A Database System," is where the rest of the work gets done (see Figure 6). As in the utility segment, menu items are selected by pressing one of the function keys. Entering names in the file you've just created is easy, and full edit capabilities are available. What's more, the edit keys and their functions appear in a line across the bottom of the screen. At first I found this line hard to read, but once I had looked up what each item meant, it served as a good reminder. This built-in reminder line shows real consideration for the user and is one reason why the hard-to-read documentation doesn't detract from the overall usefulness of the package.

Searching for records is easy and can be performed on any data field. If, for example, you can't remember the name of a record you want to see, but you know the address was in Akron, Ohio, you can tell *Personal Mailer* to search the field you've designated as "city." You're then asked for the name you want to search for. You can enter "A" or "Akr" or "Akron," and the program will show the record for the first occurrence of whatever field you're selected. You can then browse through the records until you find the one you want. There are a few different types

## MAILING LISTS

of searches possible, including "search for everything except this word" or "search across every field of every record for this word." The latter option could be especially useful for bibliographic searches.

*Personal Mailer* lets you define your mailing format, and while the screen is not as attractive as *Mailing List Manager's*, the program has the same degree of flexibility. You can place any item anywhere you want, and positioning is done visually. You can select any of the items from your records and print the combination you desire.

You cannot choose from a predetermined menu of printer fonts, but you can send your own control codes to the printer prior to printing. I personally prefer this option because it's possible to choose from the entire range of available fonts. You may choose to print out either entire records or a partial range. Labels may be printed 1, 2, or 3 across. You define everything about your records and what they'll look like at printout time.

### Low Budget Lists

If your needs are simple and your budget modest, *Name/Address Mailing* may be the package for you. It does not have the flexibility in data field definition or label-format design that make other packages mini-data base managers, but it produces mailing labels easily and offers limited sorting capabilities.

Documentation is a 14 IBM in format and size, but it's all done on a dot matrix printer. As a big dot matrix fan, I appreciate the care that's gone into this production. No tutorial is provided, but the beginner will have no trouble getting it up and running in minutes.

Entering names is easy. The items are named for you and not only include all pertinent address information, but provide for additional coding as well. Records can only be searched by customer number, but a sort can be done by name and zip so that you can print out alphabetical lists from which to find customer numbers.

The printout is standard label format with a choice of printing 1 or 2 across. Blank entries, like an unused second address line, produce blank lines on the

label, a feature I don't fancy.

The program, written in BASIC, might be fun to play with. If your mailing list needs are simple, this one's for you. ■

# PROOFWRITER™

For the IBM PC and PCjr

## Word Processor, Program Editor, and Spelling Checker

PROOFWRITER™ is a comprehensive, easy-to-learn, menu-driven Word Processing and Program Editing package designed for Scientific, Multilingual and Business Applications as well as everyday use.

The Main Features of ProofWriter™ are:

- Full Screen Menu-Driven Editor
- Over 60 Single Keystroke commands
- Word Processing in Color
- On-Screen Tutorial Introduction
- Spelling Checker
- Mail Merge Capabilities
- "Help" commands
- Easy "cut and paste" capabilities
- Spelling Errors Displayed in Reverse Video
- Foreign Language and Scientific Symbols inserted with single keystroke
- Underlining, emphasized text, superscripts and subscripts displayed during editing
- Equation mode for easy entry of Scientific Equations
- Constructs and prints any Foreign Language or Scientific Symbol on any matrix printer

DEMONSTRATION DISK  
WITH INTERACTIVE TUTORIAL  
AVAILABLE FOR \$5.00

$$\int_0^{\infty} \sin A_{00}(\alpha) e^{i\alpha x} A_0(r, \alpha) = 2\pi \frac{1}{\alpha} G(\alpha)$$

- Any symbol not included in the IBM PC character set can be displayed with optional character PROM \$125
- Tabs, Margins, and Text reformatted on the screen
- Inserts phrases or blocks of text with single keystroke
- Columns of data can be moved
- Many unique printing options: underlining on any printer, superscripts, subscripts, software generated shadow and bold type, right/left justification, centering, italics; enhanced, enlarged or condensed print; automatic numbering of footnotes, endnotes; headers, footers, and numerous page numbering options
- Will work with any printer: matrix, thimble or daisy wheel
- Text completely DOS compatible
- Compatible with program compilers

For IBM PC \$250 — For PCjr \$99 — PROOFjr \$29 (Spelling checker)

# A PC In The Type Shop: Better Than Dedicated

A modest typesetting operation, nestled in the foothills of the Sierra Nevada Mountains, is using PCs as typesetting input devices to produce manuals for software publishers.

L

M

n

R

S

U

x

w

t

v

y

z

About an hour and a half north of Sacramento, at the foothills of the Sierra Nevada mountains, lies Nevada City, California, a picturesque town with a population of 3,000 and gingerbread-style houses left over from its settlement during the California Gold Rush in 1848. Nevada City relies on its charm and history to lure tourists, who provide its bread and butter.

On one side of the town, however, is a low-key computer typesetting business, housed in a rickety four-story building. It is Dwan Typography, a business that relies on IBM PCs, not tourists, for capital. Operated by Rebecca and Kevin Dwan, the company designs and typesets the documentary manuals that accompany computer programs, as well as books.

Attracted by the Sierra foothills, the pine trees, and the quiet, the Dwans set up shop in Nevada City in 1976, combining Rebecca's expertise in printing and four-color process work and Kevin's in editing and writing.

When they started their business, the Dwans purchased a dedicated typesetting system, the Mergenthaler MPV. The system, which cost \$18,000, ran under Mergenthaler software and read only Mergenthaler disks. As customers submitted manuscripts, they were keyed into the system, using its one entry station. The disks were then processed by the machine into typeset galleys.

Initially the Dwans produced business forms, advertising, and other small-sized printing tasks. Later, they moved into book publishing, typesetting scholarly texts and contemporary works of literature for the University of California Press.

### Dedicated Alternatives

Although the dedicated system functioned adequately, the Dwans began to find it limiting. Their \$18,000 had bought them only one entry station, and, as their business picked up, this was no longer sufficient. Adding another station would be too expensive for their modest operation; furthermore, the added terminal would

function only in tandem with the whole system, so if a crash occurred on that terminal, the entire system would crash. "The dedicated machine was too dedicat-

The Dwans' goal was to produce well-designed, professionally typeset manuals unlike the Xerox-quality, hurriedly produced ones most of us are so familiar with.

ed," says Kevin. "It simply didn't offer enough flexibility."

In 1979, looking for alternatives, the Dwans bought their first microcomputer, the Altos 8000-5, a Z-80 machine running under CP/M and MP-M. This decision changed their business in two ways: it led them to abandon the dedicated typesetting system entirely, and it introduced them to a brand-new market—producing manuals for computer programs.

With the arrival of their first microcomputer, the Dwans began using computer manuals, including the manual by Digital

Research for the CP/M-86 operating system. "It struck us that there was a lively market for professionally typeset manuals," says Kevin. "We made what sales people call a cold call—I don't know you, and you don't know me—on Digital Research in Pacific Grove, California, and told them that we could work with their data on disk. We described our history with publishers, which apparently impressed them. Our first major project for DR was the manual for C/PM-86 for the IBM PC. They began working with us then, and have been with us ever since."

The Dwans' goal was to produce well-designed, professionally typeset manuals unlike the Xerox-quality, hurriedly produced ones most of us are so familiar with. Says Kevin, "Software publishers consider professionally prepared manuals an afterthought. They find themselves only 2 weeks away from a deadline, they have hassled with their programmers and editors for 6 months, and they want an instant book."

### The PC's Appearance

Dwan typography had a new mission: its primary focus now was to produce manuals for software publishers. The production process could no longer withstand the limitations of the dedicated typesetter, so they sold the Mergenthaler system and bought two IBM PCs. They chose the PC because of IBM's reputation and because of the ergonomics of its screen and keyboard. But the most significant factor was that many utility programs were available for the PC. With such programs, the PC can read disks from Kaypro, Osborne, Televideo, and many other manufacturers, in addition to its own. The Altos 8000-5 didn't offer these capabilities.

Dwan Typography now had three data entry terminals, so three operators could work independently and simultaneously, each backing up his own data. Furthermore, the company was no longer limited to the inflexible dedicated software, which allowed for little variation in text format-

# OPEN UP AN ACCOUNTING DEPARTMENT FOR \$395.00

**GENERAL LEDGER** integrated postings from A/R, A/P and Payroll. Prints 13 detailed reports • Company or departmental Income Statements • Comparative financial statements with current, YTD, budget, and last year (month and YTD) • Presents everything you, your bookkeeper, and your accountant need to know • G/L reconciles all accounts and maintains extensive, detailed audit trails • Trial Balance includes all transactions • Flexible Chart of Accounts • True double-entry bookkeeping • Master File capacity: 400 accounts • Monthly Transaction capacity: 1,000 with 200K diskette; 3,500 with 500K diskette; 7,000 per Megabyte with a hard disk.

**ACCOUNTS RECEIVABLE** provides instant, on-line customer account information (both current and aged), complete invoicing (open-item or balance forward) and statement capabilities on optional preprinted forms give your company a professional image • Quickly identify overdue accounts, speed collections, help control cash flow • Detailed and summary customer activity and aging reports • Produces 8 reports • Automatic periodic customer/merchant billing option • Itemized monthly transactions • Master File capacity: 400 Customers • Monthly Transactions capacity: 800 with 200K diskette; 3,500 with 500K diskette; 7,000 per Megabyte with a hard disk.

**ACCOUNTS PAYABLE** maintains complete vendor/voucher history and includes check-writing capabilities • Current and aged payable reports • Cash flow/cash requirements report • Prints checks with comprehensive check stubs • Produces 11 reports and documents • Automatic pay selection program allows payment by due date or by discount date • Manual and automatic checkwriting • Check register • Master File capacity: 400 Vendors • Monthly Transactions capacity: 800 with 200K diskette; 3,500 with 500K diskette; 7,000 per Megabyte with a hard disk.

**PAYROLL**—Be the office hero each week when the checks come out on time! • Calculates payroll for every type of employee (hourly, salaried, and commissioned) and prints payroll checks (with popular, comprehensive check stubs) with an absolute minimum of input • Maintains monthly, quarterly, and yearly totals for reporting in multiple states • User-maintainable Federal, State, and local tax tables • W-2 printing • 941 Reporting • Produces 10 reports • Master File capacity: 400 employees.

Why staff up? With the Desktop Accountant™, all the accounting help your office needs can be at your fingertips!

Open up a wide new range of possibilities for your microcomputer! No matter what type of business you're in, Desktop Accountant will let you manage the financial end of it more professionally than ever before.

A Complete System with Support. Desktop Accountant includes accounts receivable, accounts payable, payroll and general ledger programs, along with comprehensive user manuals and training aids. We've even prepared an audio cassette tape to make learning the system fast and fun. And our telephone "hotline" means personalized support whenever you need it.

Desktop Accountant's fully integrated accounting system is a complete package of software, training aids, manuals and user's newsletter.

Produces 42 Reports. "Keeping the books" has never been so easy! Desktop Accountant prepares every bookkeeping and accounting report your growing business requires: from invoicing to statements to aged A/R listings from cash distribution to A/P checks to vendor activity reports; from complete payroll checks and stubs to W-2 forms; from the chart of accounts to balance sheet and income statement, as well as many others so vital to efficient management.

Desktop Accountant is available for nearly every portable, personal and desktop computer. The system requires either CP/M® or MS-DOS™ (PC DOS), Microsoft BASIC™, 64K RAM, two disk drives or hard disk, and a 132-column printer (or an 8 1/2" x 11" printer with compressed print mode).

You won't find better quality software at such a low price—a price we can offer now because development costs were recovered years ago. Just \$395.00 for most CP/M® formats (\$495.00 for IBM® and some CP/M formats) complete. Call for available formats.

Order Desktop Accountant today! You'll soon see why we call it INTELLIGENT SOFTWARE FOR INTELLIGENT PEOPLE.

# BUSINESS LETTERS TO GO.

## \*OR, HOW TO WRITE EFFECTIVE BUSINESS LETTERS WITHOUT REALLY WRITING.

Often, when it comes to business letter writing, it's difficult to find the time. Or even the right words.

Add the routine business letters you should write during each busy day, and writing becomes an endless chore.

Even if you use a personal computer.

So you end up *not* writing all the letters you should. Or working overtime just to catch up.

Now there's help.

### **BUSINESS LETTERS AT YOUR FINGERTIPS.**

With The Business Letter Library, you get hundreds of concise, unique business letters, on disk. Superbly written by a leading business communications expert.

They're ready to go. And ready to use with your personal computer and almost any popular word processing software.

All you have to do is select the letter you need; customize, print, and mail. To clients, customers, business associates, vendors; *anyone* you do business with.

You get letters to start a business deal. Set up a meeting. Make a point. Close a sale. And *more*.

### **BUSINESS LETTERS WHEN YOU NEED THEM. FAST.**

The LetterSearch™ feature of The Business Letter Library helps you quickly locate the type of business letter you need.

For routine correspondence, you can make quick changes to any letter from The Business Letter Library.

Or use the on-screen KeyStyle mode to write a custom, highly personalized version of each letter.

Either way, The Business Letter Library can help you write effective business letters to fit almost any business situation.

### **YOU'RE DONE!**

By the time you've read this ad, you could've written a great business letter. It's really that easy.

And it's really that good: Whether you need to write many routine letters, or that single, very important one, you'll get *results*.

So turn business letter writing into a quick, easy, productive part of your day with The Business Letter Library.

For a full demonstration of The Business Letter Library, see your Dealer. Or call us at (714) 642-1827.

## **The Business Letter Library™**

The Business Letter Library can be used with the IBM Personal Computer, Apple II or IIe, DEC Rainbow, Commodore 64 and many other microcomputers. Compatible with most popular word processing software packages.

### **Delta Point®**

711 West 17th Street, Unit B10, Costa Mesa, CA 92627  
(714) 642-1827

ting. For PC-compatible software, the Dwans contacted a programmer by the name of Jeremy Griffith, who had written typesetting programs for dedicated machines. He agreed with the Dwans that such programs were not the best solution to the basic tasks a typesetter faces from day to day. They chose a text editor called *Omni*, written by Griffith himself. He then custom designed a series of programs written in assembly language for the PC's 8088 processor under CP/M-86, Concurrent CP/M-86, and PC-DOS. In addition, the Dwans used a number of on-the-shelf software packages.

### Producing the Manuals

Dwan Typography takes painstaking care in designing and producing its manuals, a fact that distinguishes its products from those produced by software companies. The process begins when a customer submits a manuscript on a 5¼- or 8-inch disk. If the customer desires, the Dwans will design the manual, typeset it, and do page makeup, but some customers require only typeset galleys as a final product, while others who own printing equipment want only a formatted disk.

Once the customer's requirements have been established, the next step is to revise the standard software programs to replace the existing print formatting, dot commands, or special patterns in the customer's disk with the appropriate typesetting commands. Some of the conversions are quite complex, but all are within the PC's capabilities. The Dwans are now able to offer their customers a greater number of design alternatives, because making the necessary conversions is simple with the PC. "Dedicated front-end typesetting systems, because they are not flexible computing tools, frequently have difficulty in making the complex conversions necessary," Kevin says.

Many typesetters using the traditional equipment ask customers to enter pseudocode to indicate changes in type styles and sizes. This system is designed to allow for easy and efficient substitution of typeset-

ting code, but the Dwans don't use it. "The pseudocode approach does not save the customer a significant amount of money, and if the customer makes even minor

A  
complex  
search-and-replace  
operation on a PC  
is beyond the  
capability of  
dedicated  
typesetting  
equipment costing  
ten times as much.

mistakes in entering the code, the results can be disastrously expensive," explains Kevin. The PC performs this task more efficiently using a complex search-and-replace operation. "The ability to do a complex search-and-replace operation on a \$4,000 PC is beyond the capability of dedicated typesetting equipment costing ten times as much," Kevin adds.

Although, technically, editing and proofreading have been done before the Dwans receive the manuscript on disk, they are quick to spot and correct typos. If they encounter a significant problem dur-

ing any stage of production, they pick up the phone and call the customer. Their goal is to produce a perfect product.

The formatted disks are then processed through typesetting output devices. Currently, this operation is not taking place in-house, although the Dwans plan to move in this direction. The final step, if the customer has requested it, is page makeup. The entire process takes about a week, but frequently the company accommodates customers needing overnight jobs, without compromising the quality of the job.

Rebecca sums up the company's successful conversion to microcomputers: "Up until now, micro applications as art have been rather crude. We finally made that marriage. The output that we do is state-of-the-art typesetting. Control of design elements such as kerning (adjustment of space between characters) and hyphenation is enhanced, not sacrificed, by using the PC. We can do as much of that artsy stuff as people want; ours is a tailored automatic process."

Using the PC as a typesetting input device has brought a speed and flexibility to Dwan Typography that never would have been possible with the dedicated equipment. The operation, for the most part, runs smoothly, though Kevin does have one complaint. "We use many different applications packages, which run under various operating systems. Occasionally, when we switch operating systems to run a different program, the function keys are rendered useless. You have to boot again and wait about 20 seconds—a minor annoyance, not a major bug."

Currently in the works at Dwan Typography is a manual for Digital Research's new computer language for young high-school students, Dr. LOGO. Digital Research apparently is pleased with the high-quality manuals produced by this modest typesetting outfit with its PC operation. If all software publishers could turn to Dwan Typography, computer program documentation might begin to gain a better reputation. ■

---

*It promised to take the work out of work.*

---

**T**he personal computer courted you with endless promises. It would do your job faster, make life easier, send you home happier. It would do the heavy lifting, you would do the heavy thinking.

*Alas, reality fell short of the dream.*

*The computer refused to do things the way you like to do them. Refused to juggle lots of jobs at once. Refused to move swiftly from project*

*to project. Refused, even, to understand simple English.*

*And then. Each software program took days, weeks (sometimes classes) to learn. There was no way for individual programs to talk to each other. No way to take data from here and transfer it to there.*

*The machine that promised to be your partner in a new era of productivity has behaved like a renegade two year old.*

*ENTER VISI ON.™ Suddenly and without warning, your personal computer becomes everything you actually bought it to be.*

**V**isi On is a completely new generation of business software that does what no computer or program has ever done. It makes the personal computer work harder, work easier, and work more sensibly.

How? By *managing* the computer. By making it work the way you are accustomed to working.

Think of Visi On as a "boss" who instructs the computer on how to deal with the specific applications you want to work with: Visi On Calc,™ Visi On Word,™ Visi On Graph,™ and Visi On Query.™ Since all these applications work for the same boss, they all work the same way. Learn to use one, and you've essentially learned to use them all.

Visi On makes each application the best you ever worked with, no matter which you're using. Never have individual applications performed more efficiently, more easily, or more powerfully.

Moreover, the strength of each application is actually boosted when you *combine* them.

Indeed, Visi On demonstrates its true genius whenever you want to do a number of things at once. Before now, going from a database to a spreadsheet to business graphics on a computer required rifling through a stack of different program disks and a bookcase full of instruction books.

Now, with Visi On, *each application can talk to the other.* You're free to transfer words, numbers, formulas, even entire charts, from one place to another. Noodle, fix, futz. No fumbling floppy disks. No forgetting

Instructions. Just analyze, experiment, refine, decide, and move forward.

**A**pplications appear on the screen as windows, representing workspaces. To open a window, you point a hand-held pointer called a "mouse." Two buttons on the mouse control your options.

It's simple to learn, and even easier to use. There are only a few basic commands, and they remain in sight at all times.

Should you see a problem, point your mouse at it and press a button. Having anticipated the question you were going to ask, the Help window

opens and presents the most probable answer.

There. Your computer has become a sweetheart; as cooperative, as productive as it promised it could be.

Freeing you to think about lunch.

**V**isi On works on the IBM® Personal Computer, and indeed, most computers. Including the one you now own and aren't speaking to.

And since it's open-ended, you're free to add applications such as our new communications system, which will allow you to transfer information between other personal computers, local networks, outside databases, and your company's mainframe computer.

**R**umored, reviewed, tested, heralded, and much anticipated, Visi On is now here. See your Authorized VisiCorp Dealer or sales rep for a demonstration and information on our comprehensive support program. And note one more way we ensure that your investment is never at risk: Receive your original purchase price (minus a new materials charge) for any VisiCorp software you now have, in trade for its Visi On equivalent.

You see, you're buying Visi On from VisiCorp, the leading maker of business software. No one makes more useful, more powerful software, either (just ask over a million people now using VisiCalc®). And no one supports it better.

Finally, your computer will be everything you always wanted it to be.

Visi On will never let it be anything less.

Visi On, Visi Calc, Visi On Word, Visi On Graph, Visi On Query and Visi On are trademarks of VisiCorp. Visi On and Visi Calc are registered trademarks of International Business Machines Corp. © 1987 VisiCorp.

This is IT.

# IT is...

... an integrated set of easy-to-use, micro-computer programs that can transform your desktop computer into a total information center. Ten programs, each separately available, make ITSoftware® the most comprehensive and flexible software system available for personal computers.

The core program is KeepIT, a menu-driven, relational data base management system. Not only does KeepIT integrate the entire ITSoftware series, but also all your other popular micro-based software. Get all the benefits of individual programs, plus the convenience of shared data among programs. Use our programs or yours!

**KeepIT** manages data with the flexibility of a fully relational data management program and the ease of use associated with prompts and menus. It provides inputs to other ITSoftware programs or to your own word processor, spread sheet or graphics programs.

**CalcIT** is a powerful 3-D spread sheet program with advanced arithmetic and graphing features.

**LinkIT** is a menu-driven, asynchronous communications package that links your PC to mainframes.

**PassIT** provides file transfer capability for your 3270 emulation boards.

**SortIT** is the fastest sort/merge utility available for your PC with flexible file formats, up to nine sort fields and unlimited file sizes.

**EditIT** is a full-screen color program editor with easy-to-use windows and mouse management.

**StatIT** is the leader in micro-based statistical software. Its features include cross-tab, transformation, ANOVA, correlation, ANOVA, and regression.

As examples, KeepIT provides input to programs for:

Word Processing	Spread Sheets	Graphics	Statistics	Communications
MultiMate	1-2-3	1-2-3	MicroStat	All Others
Wordstar	MultiPlan	BPS Graphics		
WordPerfect	VisiCalc	FastGraphs		
WordPlus-PC	SuperCalc	Graphwriter		

These products are registered trademarks.

**ShowIT** is a state-of-the-art business graphics and drawing program with direct data transfer from CalcIT and KeepIT.

**SendIT** allows you to prepare slide shows with ShowIT and simultaneously send them to multiple locations.

**WritIT** provides the latest in word processing features and easy integration with mail lists and tables provided by KeepIT.

## Use IT

Powerful, flexible and easy to use, ITSoftware can meet your information management needs with ten fully integrated programs. And there are more on the way. Martin Marietta Data Systems is continually expanding to keep pace with today's dynamic micro marketplace.

## Buy IT

ITSoftware... ask for IT by name. For more information call (800) 222-0592. In New Jersey: (609) 799-2600. Or write ITSoftware, Marketing Services, P.O. Box 2392, Princeton, New Jersey 08540. We'll send you a free brochure.

\*from the company that brings you RAMIS® II mainframe software.

# Introduce yourself to the IBM/PC with "HELLO CHARLIE"

Would you like to see what your new IBM/PC can do without spending hundreds of dollars on software? "HELLO CHARLIE" gives you a smorgasbord of some of the most popular types of programs available for the PC. Entertainment, graphics, spreadsheet, typing tutor, it's all there. Some of the programs include:

■ **A Graphics Tool**—Turn your PC into a drawing board with "HELLO CHARLIE'S" graphics program. Create, scale, transfer and rotate pictures on your display. Then print hard copies with screen print routines for most of the popular dot matrix printers.

■ **A Typing Tutor**—Highly interactive, self paced tutor that teaches you how to type correctly and increase your typing speed.

■ **A Financial Tool**—"HELLO CHARLIE" includes Calc-86™, a powerful spreadsheet program that's functionally comparable to VisiCalc® and SuperCalc®. With its many powerful functions and commands, Calc-86™ is the only spreadsheet you'll ever need for your personal and business planning needs.

■ **An Entertainment Package**—Six exciting games, ranging from mind-benders like Othello and Life to action games like Millibug and Chomper.

"HELLO CHARLIE" turns your PC into the focal point for education and amusement. So say hello to your IBM/PC—go to your local IBM dealer and say "HELLO CHARLIE" today.

## POWERFUL PROGRAMS INCREDIBLY LOW PRICE!

(Order No. 5053)

**A \$52.90 VALUE FOR ONLY \$2.95!**

- Includes ready-to-run software disk containing all programs featured in this outstanding IBM PC guide.

### 7 very good reasons to join The Computer Book Club

P.O. Box 80 Blue Ridge Summit, PA 17214

- **Big Savings.** Save 20% to 70% on books sure to increase your know-how
- **No Risk Guarantee.** All books returnable within 10 days without obligation at Club expense
- **Club News Bulletin.** All about current selections—mains, alternates, extras—plus bonus offers. Comes 13 times a year with hundreds of up-to-the-minute titles you can pick from
- **"Automatic Order."** Do nothing, and the Main selection will be shipped automatically! But... if you want an Alternate selection—or no books at all—we'll follow the instruction you give on the reply form with every News Bulletin
- **Bonus Books.** Immediately get Dividend Certificates with every book purchased and qualify for big discounts of 60% to 80%
- **Bonus Specials.** Take advantage of sales, special events, and added-value promotions.
- **Exceptional Quality.** All books are first-rate publisher's editions selected by our Editorial Board, filled with useful, up-to-the-minute information

**100 Ready-to-Run Programs  
& Subroutines for the IBM PC®  
plus Companion Software Disk**

**ONLY \$2<sup>95</sup>  
when you join**

Here's an exceptional programming aid packed with a wide range of applications to take full advantage of your IBM PC's unique sound, graphics, and programming capabilities!

You'll learn, for instance, how to use one of the PC's most significant features—the ability to use long variable names—to make your programs virtually self documenting and immensely readable!

Programs cover an impressive range of subjects: educational programs, graphics techniques, mathematics, modem communications, small business programs, and games! More than 50 pages of programming aids, subroutines, and utilities contain a treasure trove of useful, time-saving information.

**PLUS** you'll get a companion ready-to-run software disk containing all the programs documented and described in *100 Ready-to-Run Programs and Subroutines for the IBM PC®*. Designed to save typing time and eliminate typing errors, this disk is your special bonus for joining The Computer Book Club now!

### The Computer Book Club®

P.O. Box 80 Blue Ridge Summit, PA 17214

Please accept my membership in The Computer Book Club and send my copy of *100 Ready-to-Run Programs and Subroutines for the IBM PC®* with companion disk. (No. 5053), billing me at \$2.95 plus shipping and handling charges. If not satisfied, I may return the book and disk within ten days without obligation and have my membership canceled. I agree to purchase 3 or more books at reduced Club prices (plus shipping/handling) during the next 12 months, and may resign any time thereafter.

# PRESENTING THE NO-RISK DISK.<sup>SM</sup>

Play it again. And again. And again.

No matter how many times you play it, the TDK No-Risk Disk<sup>SM</sup> won't drop a letter. A word. Not even a bit.

We guarantee it.

And not for 1 year. Or 5 years. But with a lifetime replacement warranty for as long as you own the disk.

Our confidence is the result of almost 50 years' research and development of TDK magnetic components and recording products.

From that, we've been able to produce special surfaces and coatings that cut the effects of wear on a disk.

Which means you can store all your valuable documents, time-honored information and one-of-a-kind thoughts on a TDK disk.

And know it will not fail you.

So the next time you want to store important information, put it on TDK.

You've got nothing to lose.

CIRCLE 410 ON READER SERVICE CARD

TDK offers a complete line of the most popular disks in 5 1/4- and 8-inch formats.

# Never again worry about computer theft or damage

## What could be better than full replacement?

By now, you've probably heard or read about SAFEWARE<sup>SM</sup> Insurance for microcomputers. But you may still wonder just what it protects, or whether it's really worth the investment. If you've never lost any part of your computer system or software, you probably don't yet realize the limitations of most standard insurance coverages. Or the agonies you could face in trying to recover even the simplest piece of peripheral equipment.

## What do you mean it's not covered?

Operating your computer system without SAFEWARE protection is fine as long as you don't have to worry about an accident or loss. But what if you came to your office one morning to find you'd been robbed? Or your home had been ransacked? Or that a pipe had burst and caused water damage? Or that your system, too, had fallen victim to a leading destroyer of micro-systems—a power surge? All events beyond your control. If something like this should happen to you, you're likely to find out the hard way just how limited your standard insurance policy's protection really is. And no matter how little or how much you have invested in your computer system, discovering that it's not covered can be an expensive lesson.

## Now you can be sure

SAFEWARE was developed by an insurance professional who was shocked to learn that his very own personal computer was at risk. Can you imagine? What he discovered was that his homeowners insurance policy excluded coverage as soon as he began operating his first business program. Even his simplest spreadsheet voided coverage. Because most homeowners policies won't cover any equipment used for business, no matter how infrequently. Out of this was born SAFEWARE. A simple, easy-to-understand coverage you can count on. Full replacement coverage of hardware, software and media, after a low \$50 deductible.

With SAFEWARE there's no need for you to schedule equipment or software as you do with the "rider" type of policies. So your coverage can grow with your system, providing protection for its full value rather than for each individual item. This will be especially impor-

tant to you if you're ever planning to buy additional equipment or software. Even just one peripheral.

## What the editors are saying

**Desktop Computing:** "...Given the amount of money that business users spend on computer equipment... it's not too farfetched to say that an insurance policy may be the most important new accessory that you could add to your desktop computer system."

**Computer Decisions:** "...Your personal computer might not be safe at home. If it is not insured, then you're running the risk of losing the thousands of dollars you've invested..."

**Personal Computing:** "...Replacing hardware may be more of a problem than you thought it would be... That's why (a computer consultant) suggests that you get the computer insured."

**Wall Street Journal:** "...

"[SAFEWARE] introduces coverage that insures home computers regardless of use. The usual premiums about \$75 a year."

## An All-Risk, no risk offer

SAFEWARE is an All-Risk plan of insurance, which means that it covers all hardware, all purchased software, and all media. Your complete system is protected against

theft, fire, accidental damage, even damage sustained while the computer is being transported in your car. SAFEWARE even covers damage caused by power surges... the leading destroyer of microcomputers. And, now, SAFEWARE is available on a no-risk basis. If you are not completely satisfied with the protection afforded by SAFEWARE, you may return the contract for a full refund within the first 10 days after you've received it.

## Thousands have said "yes!"

Since it was first introduced in 1982, thousands of computer owners, like you, have said "yes" to the SAFEWARE offer. Owners of systems from the smallest portable micros to larger sophisticated business systems are finding that SAFEWARE offers the most affordable and complete security. And the simplest peace of mind available to ensure carefree computing.

## The cost: pennies a day

As you can see from the table, the annual premium for a typical system consisting of a \$3,000 processor, a disk drive and printer worth \$1,100, and \$900 in software, is just \$60. And you can save even more since the cost of insurance for personal computers used for business may be tax deductible. To deter-

mine your rate of coverage, just add up your total system value. Then, find the premium in the table.

## Easy to order

Choose from three simple ways to pay for your complete SAFEWARE protection: Call the toll-free phone number listed and we'll charge your premium to your VISA or MasterCard. Or, you can mail us your order along with your check. Or, send us the coupon and charge to your credit card.

Total Hardware, Media & Software System Value	Annual Premium
Up to \$ 2,000	\$ 35
\$ 2,001-\$ 5,000	\$ 60
\$ 5,001-\$ 8,000	\$ 75
\$ 8,001-\$11,000	\$ 90
\$11,001-\$14,000	\$105

# In The Beginning...

There was the "Shoe-Box" accounting system...

## But Now There's Mini-Ledger

While those dinosaur-size companies resort to large, integrated computer accounting packages, your modest-size company can track key income and expense activities through the use of Paradigm's **single-entry Mini-Ledger** program. And you can do this for only \$150.00.

With **Mini-Ledger**, you can define up to 99 codes like your company car expenses, entertainment, rent, payroll, cash flow...it's up to you. And because **Mini-Ledger** is so easy to use, you don't need any accounting

experience to run it. Also, several printouts are available to help you prepare clear and accurate statements of your financial operation. That's ideal for tax purposes.

To employ **Mini-Ledger**, you need either CP/M, CP/M-86 or MS-DOS, at least one disk drive, and a 132 column printer. A demo version with user's manual is available for \$30.00.

With **Mini-Ledger**, those prehistoric days of Shoe-Box accounting are over.

# Doing Business With BASIC

Business BASIC may not be known as widely as Microsoft BASIC, but this easy-to-program language is used to develop commercial applications on the IBM PC.

**M**any of you may have heard the story of how Microsoft's BASIC came into being. An interpreter was designed and the language was implemented on an Altair, the granddaddy of personal computers, over the course of only a few weeks. Since then, this version of BASIC has become available on dozens of computers and is now almost synonymous with the IBM PC.

## **BI-286**

Control-C Software  
6441 SW Canyon Court  
Portland, OR 97221  
(503) 297-7153

List Price: \$500

Requires: 74K RAM, two disk drives.

CIRCLE 800 ON READER SERVICE CARD

What you may not know, however, is that an earlier BASIC interpreter was developed for the Altair, resulting in an implementation called Business BASIC. It was originally developed by a company called BASIC Four for its series of minicomputers and has since migrated to other minicomputers such as the IBM Series/1 and the DEC PDP-11. It first came to the microcomputer world on multiuser systems based on the Motorola 68000 (for example, Pixel and Wicat), Zilog Z8000 (Zilog) and the PC's older cousin, the Intel 8086 (Rexon and Mercator). It is now available on the IBM PC from a company called Control-C Software, in Portland, Oregon, under the name BI-286. This version, designed for single use, deserves serious attention from programmers inter-

ested in business applications.

## **Strictly Business**

So just what is Business BASIC? Well, first and foremost it is the language BASIC, a descendent of the original version, which was developed at Dartmouth College, in New Hampshire. However, it is strictly business oriented and aims to solve commercial problems in the simplest way possible. It succeeds magnificently. Originally Business BASIC was designed for multiple-user systems, and features such as file and record locking convey this origin. Until Business BASIC was written to run on MS-DOS and CP/M systems, all implementations were written for systems that accommodate more than one user.

(continued)

## BUSINESS BASIC

Although some of its multiuser features may be unnecessary in the PC version, this capacity offers a significant benefit. If you have PC software written in Business BASIC, it can be moved onto multiuser systems with a minimum of conversion.

And I do mean a minimum. One of the oddities of Business BASIC is that versions from different manufacturers are tremendously compatible. BASIC Four may have developed it, but the companies that have written their own versions have followed the original closely. Most likely, these companies had an interest in BASIC Four's customer base, but, whatever their reasons, I find this compatibility remarkable. If you look at the implementations of

I'm  
sure plenty of  
Osborne users  
would love this  
transportability now.

BASIC from Microsoft, Atari, Texas Instruments, and Digital Research, you will be left wondering just what BASIC is, because each of these versions is so different. Business BASIC offers one of the most programmer-friendly features of all: You can easily transport your code to a

number of other machines. I'm sure plenty of Osborne users would love this transportability now.

### Easy Programming

Business BASIC offers a number of features designed to make programming easy. It uses Binary Coded Decimal (BCD) arithmetic, which means you do not have to wrestle with integer, single, and double-precision numbers. (Nor do you have to read on the front page of the *Wall Street Journal* that your computer has trouble with division.) BCD arithmetic means that your computer does all its work in base 10, as most people do. This is particularly easy on the IBM PC, since its 8088 processor has special instructions for BCD arithmetic. Any number can be up to 14 digits long and include seven decimal places. In Business BASIC you can specify at any time how many decimal places you want to use. Two is normal. You would issue the command PRECISION 2 to your computer, which means that all calculations will be automatically rounded to two decimal places (for example,  $2.23 * 1.5 = 3.35$ ).

A far more important feature of Business BASIC is keyed file support, which allows you to use strings for keys. For example, you can write out records using names, addresses, and dates for keys. Microsoft BASIC does not offer this support, nor do such languages as C and Pascal. While it is true that you can write a set of routines to support keyed files, the reality is that very few programmers are capable of or even interested in doing so. Applications programmers want to develop applications, not build their own tools. They believe, quite rightfully, that the people who develop language compilers and interpreters should provide the means to solve the problems encountered on a day-to-day basis. In business applications keyed files are particularly important. Although some businesses might claim that customers can be accessed by customer numbers, this isn't practical. You need

### A Business BASIC Program.

Programming in Business BASIC is straightforward and efficient. Here's a short program for inputting names and addresses.

The program below will let you input a name and address, write it to a keyed disk file, and then log it to a printer. The mnemonic 'FF' does a form feed on the printer; @ (40) tabs to column 40 on the printer. The ERROR trap on the input statements will go to line 1000 if input longer than the LENGTH specified is entered. 'CS' clears the screen, and 'CL' will clear only the current line. INPUT \* will ignore the value entered and just wait for a RETURN. RETRY retries the statement in error. WRITE . . . KEY=A\$ writes to a keyed file using the name input. Note that you do not need to LSET, RSET, or FIELD anything; you simply specify a list of variables to be written out to our disk file.

```
10 REM 'This is a short Business Basic Program
20 PRINT 'CS'
30 OPEN (1)'OUTPUT',(2)'LP'
35 PRINT (2) 'FF','Name',@(40),'Address','LF'
40 INPUT (0,ERR=1000)@(10,10),'Name: ',A$:(LEN=20)
50 IF A$="" END
60 INPUT (0,ERR=1000)@(10,11),'Address: ',B$:(LEN=30)
70 PRINT (2) A$,@(40),B$
80 WRITE (1,KEY=A$)A$,B$
99 GOTO 40
1000 PRINT @(0,23),'CL','Input is too long -- reenter'
1010 INPUT *
1099 RETRY
9999 END
```

names and addresses to get at information, because most business customers don't know what number you have assigned them and won't take the time to learn. Some of the commercial applications available on the PC don't need keyed files (word processors and spreadsheets, for instance), while others rely heavily upon your ability to use numbers for access. Numbers are the only way to get into random files, but Business BASIC's keyed files allow you to access data in ways that people normally want to. They also provide more speed and flexibility, which is increasingly important as sorting becomes a thing of the past in most applications.

These powerful features, are essential to all versions of Business BASIC. Versions that cover only these features are usually called "BBII compatible," in reference to BASIC Four's level 2 version. This rather simple implementation has been largely replaced by the more powerful "BBIII compatible" versions, which include additional features.

One additional feature of Business BASIC is the EXECUTE command. One of the frustrations of BASIC is its inability to issue commands such as GOSUB X or GOTO X. Business BASIC can't do this either, but its enormously powerful EXECUTE command serves the same purpose. It takes a string (for example, EXECUTE XS), which, if numbered, is treated as a line of code or, otherwise, as a direct command. For example, you can say EXECUTE "GOTO"+XS, where XS is a line number. The EXECUTE command also lets you build lines of code inside of a program, which brings me to another useful facet of Business BASIC. It allows you to add or delete lines of code and change variables without having to start over again. This is not only useful for debugging or for continuing programming after an error, it also lets the EXECUTE command build code for you inside your program.

Another powerful feature of Business BASIC is called public programming, which lets you CALL other BASIC rou-

tines that are not part of your program. These routines are written in BASIC, not machine language, and can be stored in the computer's memory. This means that common code, such as screen editors or date checks, can be placed into a single module and doesn't have to appear in every program you write. So why not use the CHAIN command to join the pro-

### Business BASIC does not support graphics commands such as PAINT, CIRCLE, or DRAW.

grams? Well, first of all you have to get back to your original program. Provided you know where you came from and how to get back, this isn't so bad. But if you want to go back to the next line, how do you do it? In Business BASIC the CALL command will serve the same purpose or you could EXECUTE "GOTO"+STR(X+1), where X is the last line you were on. Note that Business BASIC does not require you to GOTO lines that actually exist. For instance, if you GOTO 1000 and 1000 is not an actual line number, Business BASIC will find the next line and continue from there. This is very useful, especially if you delete lines that are referenced elsewhere. Finally, if you CALL a routine, its internal variables are local, and will not interfere with those in your programs. This feature is totally lacking in most versions of BASIC, where all variables have a universal nature.

#### Mixed Blessings

While Business BASIC has all of these ease-of-programming features, it also comes with a number of mixed blessings. The first is that variable names are limited to one letter and one number (for example,

V, A05, Q(2)). Although this may seem terribly restrictive, it prevents you from getting lost in a sea of similar names. If you try to use mnemonic names, you run the danger of names that are truncated to the same end result! Since Microsoft BASIC limits you to 255 character lines (Business BASIC is very forgiving in this regard—you can have 64K characters in a line or in a variable. For example, DIM XS(50000) is OK!

The second mixed blessing is that Business BASIC does not support string arrays. If you enter DIM XS(100) you get a string of 100 spaces called XS, which may not be so bad. It means MID\$, LEFT\$, and RIGHT\$ are unnecessary. The string XS(10,10) means the same as MID\$(XS,10,10) in Microsoft. This economy is a practical advantage, and, overall, it outweighs the use of string arrays, which can be easily mimicked. It is also possible to use a string expression such as XS(10,10)="ABCDEFGHJ".

Business BASIC is also missing some things. Some, such as natural logarithms and hyperbolic cosines, are no great loss for commercial users. In fact, they are useless clutter. Other omissions are more significant, though. The language does not support graphics commands such as PAINT, CIRCLE, or DRAW. These features were not widely available when Business BASIC was created. Microsoft does an excellent job with these graphics commands, but, in any event, they are not essential to business applications. On the other hand, Business BASIC does provide better control of the monochrome monitor. It uses mnemonic codes for screen control 'CS' clears the screen and @(X,Y) positions the cursor to column X and row Y. (CLS and POSITION are the corresponding Microsoft commands.) Business BASIC uses the following additional codes: 'LD' deletes a line and rolls the screen, 'LI' inserts a line, 'SB' goes into low intensity, and 'SF' goes into high intensity.

Since Business BASIC was intended to be a complete system and since a multius-

## BUSINESS BASIC

er environment with memory management means you have no idea where your task is, this version of the language has no PEEK and POKE command. I wish it did. However, this omission is at most only an irritant. Business programs should have no need of peeks and pokes.

### BI-286

BI-286, the PC version of Business BASIC, is the only interpreter that was available as I wrote this article, though others are expected soon. It is available to run under MS-DOS, C/P-M-86, MP/M-86, MP/M, C/PM, and Turbodos. As far as I know, all versions are 100 percent compatible. BI-286 is a solid product, and it functions as documented. The manual is quite clear and you could learn Business BASIC from it, which is fortunate since I know of no book that is available on the subject. I suggest, however, that you learn something about BASIC first, if you aren't familiar with it already. Business BASIC does share many features such as PRINT, INPUT, LET, GOSUB, GOTO, FOR . . . NEXT, and so forth with all versions of BASIC, and it, too, uses line numbers for control.

BI-286 supports keyed files without any trouble. Up to 15 files, plus the keyboard, may be OPENED at once. This is adequate for almost any application. It has the standard BCD arithmetic and string handling. It also supports the E key—a useful feature that can be used to do such things as terminate a program or ask for HELP whenever you want. Unfortunately, BI-286 is compatible only with BBII and therefore does not support commands such as EXECUTE and CALL. This is a bit disappointing, especially since this product has been around for awhile.

As I noted earlier, BI-286 is a single-user version of Business BASIC. It does not support a second terminal, although it is compatible with versions designed for multiple users.

BI-286 has several severe shortcomings. Clearly it was ported over to MS-DOS in a hurry to hop on the IBM PC

bandwagon, and the rush job shows. It does not support any of the ten function keys or the cursor control keys. Nor can it access a serial port. Business BASIC usually allows you to OPEN serial ports for I/O without any trouble (for example, OPEN(1) "T2"). Business BASIC usually allows at least one task to be run that does not need to communicate with the terminal screen, which is called a background task. If you have a background task, you can swap it in or out with your main task (similar to the capabilities of Concurrent CP/M). BI-286 does not support this very useful feature. It also has no color support (you get white on black) or graphics. Overall, the PC version of Business BASIC is a bit of a disappointment and doesn't take advantage of the PC's capabilities. Oh well, the original version of *WordStar* for the PC wasn't great, either. Nonetheless, BI-286 does do what it says it will and is a good introduction to Business BASIC, until other versions reach the marketplace.

### Coming Soon

A company called Standard Software announced a BBIII compatible interpreter some time ago, but as of October 1, it was not available. This company has also announced a compiled version, which, as far as I know, will be the first version of compiled Business BASIC.

Also upcoming for the PC is a version from Science Management Corporation, the leader in Business BASIC. SMC BASIC will be BBIII compatible and will also run on an IBM Series/1, the DEC PDP-11 and numerous UNIX-based systems. If its PC version is as good as its previous efforts, this product will be well worth waiting for.

Business BASIC has only minor faults; the main ones are graphics and color. You will have to stick to good old Microsoft BASIC for these, but if you want the finest language ever developed for commercial uses, one that allows you to develop applications as fast and as easily as possible, Business BASIC is the winner. ■

## SPECTRUM

# Professional Software Products

### MATHEMATICS SERIES

#### The Series Includes These 4 Programs:

**STATISTICAL ANALYSIS I:** This menu driven program performs LINEAR REGRESSION analysis, determines the mean, standard deviation and plots the frequency distribution of user-supplied data sets.

**NUMERICAL ANALYSIS:** HI-RES 2-Dimensional plot of any function. Automatic scaling. At your option, the program will plot the function, plot the INTEGRAL, plot the DERIVATIVE, determine the ROOTS, MAXIMA, MINIMA and INTEGRAL VALUE.

**MATRIX:** A general purpose, menu driven program for determining the INVERSE and DETERMINANT of any matrix, as well as the SOLUTION to any set of SIMULTANEOUS LINEAR EQUATIONS.

**3-D SURFACE PLOTTER:** Explore the ELEGANCE and BEAUTY of MATHEMATICS by creating HI-RES PLOTS of 3-dimensional surfaces from any 3-variable equations. Hidden line or transparent plotting.

For APPLE II (48K) and IBM PC (54K) ..... \$50.00

### BUSINESS SOFTWARE SERIES

Both Programs \$250.00

A user-friendly yet comprehensive double-entry accounting system employing screen-oriented data input forms, extensive error-trapping, data validation and special routines for high speed operation. The series includes these two modules:

**GENERAL LEDGER:** A complete accounting system with these features:

- Up to 500 accounts and 500 transactions per month.
- Interactive on-screen transaction journal
- Produces these reports:
 

Transactions Journal	Balance Sheet
Account Ledgers	Account Listings
Income Statement	

For APPLE II and IBM PC ..... \$150.00

### ACCOUNTS RECEIVABLE

A flexible system with these features:

- Up to 500 accounts and up to 500 invoices per diskette.
- Prints invoices, customer statements & address labels.
- Interfaces to General Ledger
- Interactive screen-based invoice work sheet
- Produces these reports:
 

Aged Receivables	Sales Analysis
Account Listings	Customer Balances

For APPLE II and IBM PC ..... (2 DRIVES) ..... \$150.00

### MICRO-LOGIC

An interactive graphics program for designing and simulating digital logic systems. Using the built-in graphics module, the user creates a logic diagram consisting of AND, OR, NAND, NOR, EX-OR, O, T, JK, FLIP FLOP and powerful 16 pin user-defined MACRO functions. A typical page of a logic diagram looks like this:

The system provides on-screen editors for NETWORKS/MACROS DATA CHANNELS, CLOCK WAVEFORMS and GATES. GATE attributes include DELAY, TRUTH TABLE, NAME and I/O clocking.

The system is available for Apple II and IBM PC computers. A non-graphics version is available for CP/M 2.2. It uses the network editor to create netlists and text printer plots to display simulation results. All versions require 2- 5 1/4" disk drives.

For APPLE II, IBM PC (192K) and CP/M (70K) \$450.00  
MANUAL & DEMO DISKETTE ..... \$50.00

### PERSONAL FINANCE MASTER

The premier personal and small business financial system. Covering all types of accounts including check registers, savings, money market, loan, credit card and other asset or liability accounts, the system has these features:

- Handles 25 Asset/Liability Accounts
- Monthly Transaction Reports
- Budgets Income & Expense
- Reconciles to Bank Statements
- Prints Checks & Mailing Labels
- Automatic Year-End Rollover
- Prepares a Net Worth Reports
- Searches for Transactions
- Handles Split Transactions
- User-Friendly Data Entry Forms
- Fast Machine Language Routines
- Extensive Error Trapping
- HI-RES Expense/Income Plots

For APPLE II and IBM PC ..... \$75.00

### MICRO-CAP

#### Microcomputer Circuit Analysis Program

Tired of trial & error circuit design? Analyze and debug your designs before you build them. With MICRO-CAP you simply sketch your circuit diagram on the CRT screen and run an AC, DC or TRANSIENT ANALYSIS. Your circuit may consist of RESISTORS, CAPACITORS, INDUCTORS, DIODES, BATTERIES, BIPOLAR or MOS TRANSISTORS, OPAMPS TRANSFORMERS, and SINEWAVE or USER-DEFINED TIME DEPENDENT VOLTAGE SOURCES. MICRO-CAP can analyze any such network containing up to 40 separate nodes. Includes a user controlled MACRO library for modelling complex components such as OPAMPS and Transistors.

For APPLE II and IBM PC computers. A non-graphics version using an on-screen editor to enter networks and text printer plots to display simulation results is available for CP/M (2- 5 1/4" SSSD) systems. Requires 2 disk drives.

For APPLE II, IBM PC (192K) and CP/M (70K) \$475.00  
MANUAL and DEMO DISKETTE ..... \$50.00

**ORDERING INSTRUCTIONS:** All programs are supplied on disk and run on Apple II (54K) or IBM PC (128K) with a single disk drive unless otherwise noted. Detailed instructions included. Orders are shipped within 5 days. Card users include card number. Add \$2.50 postage and handling with each order. California residents add 6 1/2% sales tax. Foreign orders add \$5.00 postage and handling per product.

# America's Number 1 Computer Buying Service Brings You These 10 Exclusive, Money-Saving Benefits...

Join PC NETWORK for as low as \$8 for one year (or \$15 for two years) and receive all these exclusive, money-saving benefits:

**1. REAL BUYING CLOUD**—You'll find software and hardware for every application, compatible with any system from all manufacturers. And it's all just 8% above the PC NETWORK'S cost, to cover administrative expenses and allow for some profit.

**2. CONVENIENT SHOP-AT-HOME CATALOG**—Members receive our catalog featuring thousands of computer software, hardware and related products. Ordering is as easy as picking up your phone or mailing in the order form enclosed with each order. And remember, any item in the catalog is yours for just 8% above the dealer wholesale price, plus shipping! You may also access the entire catalog from your home system, providing you have a modem and terminal program. On credit card orders there is a 3% service charge.

**3. KNOWLEDGEABLE SERVICE CONSULTANTS**—Our qualified consultants are ready to answer any questions you may have regarding compatibility, memory, language requirements, pricing, and other important matters. You'll be certain that your purchase is exactly what you need at the best possible price.

**4. FULLY INSURED FAST HOME DELIVERY**—The PC NETWORK assumes full responsibility for all shipments. Most orders are processed and shipped within 24 hours. Your purchase will be at your doorstep within several days of our receiving your request. In some cases we can even deliver overnight. Please feel free to inquire which items are serviceable in this way.

## CALL TOLL-FREE

Call now...Join the PC NETWORK and start saving today!

## 5. OPTIONAL BUSINESS SOFTWARE

**5. RENTAL LIBRARY**—All members are eligible to join our Business Software Rental Library for just \$30 per year in addition to the basic membership fee. This entitles you to rent business software at just 20%-25% of PC NETWORK's low prices for a 7-day period (plus a 3-day grace period for return shipping). This is an ideal way for you to inexpensively test various programs and see which best matches your needs. And should you decide to buy, 100% of your rental fee applies toward the purchase of the rented merchandise.

## 6. OPTIONAL GAME SOFTWARE RENTAL

**6. LIBRARY**—All members are eligible to join our Game Software Rental Library for \$10 per year in addition to the basic membership fee. All the same conditions apply as for the Business Software Rental Library (benefit five). See which game you like best before you buy, or just play each until you've had enough fun.

## SPECIAL V.I.P. MEMBERSHIP

A limited number of PC NETWORK V.I.P. Memberships are available at just \$15 for one year or \$25 for two years.

V.I.P. Members receive additional benefits:

**1. V.I.P. SAVINGS ON SOFTWARE RENTAL LIBRARIES**—All V.I.P. Members are eligible to join our Business AND Game Software Rental Libraries for just \$35 per year in addition to the basic V.I.P. membership fee. All the same conditions apply to the V.I.P. Libraries as the Basic Membership Libraries.

**2. EXTENDED V.I.P. RENTAL PRIVILEGES**—We've invented the 10-day week so V.I.P. Members can enjoy their rented merchandise longer...a full 10 days (plus a three-day grace period for return shipping) instead of the seven days allowed with our Basic Membership Libraries.

**3. IMMEDIATE ACCESS TO "THE PRINT-OUT" SPECIAL SAVINGS BULLETIN**—V.I.P. Members can access our savings newsletter from their system BEFORE it is mailed to other members providing they have a modem and terminal program. Special savings merchandise is available in limited quantity only and V.I.P. Members have first preference. You may save the difference in membership costs on your first order from a special savings bulletin!

## 7. SPECIAL SAVINGS BULLETINS

**7. MAILED DIRECTLY TO YOUR HOME**—Periodically you'll receive "THE PRINTOUT," a computer-generated newsletter featuring computer software and hardware that PC NETWORK was able to purchase at tremendous savings. As a Member, these savings on select, limited-quantity merchandise are passed right along to you!

## 8. NEW DISCOUNT COMPUTER BOOK

**8. LIBRARY**—Now you can purchase computer-related books at up to 50% savings from our huge inventory of informative and entertaining titles—probably many more than you'd find at your library, book or computer store.

## 9. MEMBERSHIP SATISFACTION

**9. GUARANTEE**—If for any reason you are not satisfied with our low prices, fast home delivery and other exclusive services, notify us within 30 days of your membership validation to receive a 100% money-back refund. This refund is yours regardless of whether or not you made any purchases or received any benefits as a PC NETWORK Member.

## 10. PRODUCT SATISFACTION

**10. GUARANTEE**—If for any reason you are not completely satisfied with any hardware you purchase as a member, return it to us within 15 days for a 100% money-back refund.

All items subject to availability, prices subject to change without notice.

# A portable computer needs a portable surge suppressor. The PC Saver™ line cord.

The beauty of your portable computer is that it goes everywhere you go.

Unfortunately, it meets power line problems all along the way.

In a recent PC Magazine cover story, it is estimated that 70-90% of all microcomputer malfunctions can be traced to power line problems. Problems that are magnified with a portable, since you never know what situation awaits you.

## **With the PC Saver, power line problems are no problem.**

No matter where you plug in your portable computer, the PC Saver immediately acts to suppress surges, spikes and line noise. This prevents damage and allows your computer to function at its maximum efficiency.

The PC Saver clips surges and spikes to a safe 133 Volts RMS/175 Volts DC level in less than 50 nano seconds. An 'L' type filter attenuates common and transverse mode noise by a minimum of 20dB from 600 kHz to 30 MHz with a maximum attenuation of 50dB. All the circuitry conforms to standards established by the IEEE (Institute of Electrical and Electronics Engineers) and UL (Underwriters Laboratories).

## **The PC Saver is as portable as your portable.**

The PC Saver is so light and compact it will fit right into your briefcase. We've put all the protective circuitry right into a power cord. To use, simply replace your factory supplied cord with the PC Saver line cord.

Will PC Saver fit your computer? The chances are it will. Almost all portable computers, Compaq™ Kaypro™ Eagle™ Corona™ Hyphenon™ Columbia Data Systems™ and others use the standard style power cord.

## **Affordable protection**

\$49.95 is a small investment for keeping your portable at top efficiency.

You'll find the PC Saver line cord at computer stores everywhere. Or order direct from Kensington Microwave Ltd., 251 Park Avenue South, New York, N.Y. 10010. Phone: (212) 486-7707, Telex: 236200 KEN UR. For phone or mail orders please include \$2.50 shipping and handling. New York State residents add sales tax. Visa and MasterCard accepted.

# IBM PC Rocks And Rolls

Tour managers for rock and roll bands use PCs and compatibles in the office and on the road.

**D**igital audio might be transforming the sound of contemporary rock and roll both on stage and on platter, but the real revolution in rock and roll isn't in the music but in management.

Rock and roll groups need tour/accountant managers to make sure a band makes its scheduled appearances and makes money, too. New faces, namely the IBM PC and the compatibles, are joining the road crew of such world-renowned groups as The Police, Supertramp, Toto, and The Tubes.

Management is as much a part of rock

and roll as the electric guitar. For music businessmen in need of instant cost breakdowns, location and scheduling information, boilerplate contracts, mailing lists, press contacts, and other statistics that are part and parcel of modern touring groups, the microcomputer has become an indispensable tool.

### **Toto, The Tubes, and the PC**

One tour manager, Chris Littleton, of the Los Angeles artist management firm, Fitzgerald Hartley Company, has worked for the Grammy award-winning group, Toto, and the art rock group, The Tubes.

**Introducing software  
the way you would have  
designed it yourself.**

**PYRAMID**

PYRAMID DATA  
CIRCLE 519 ON READER SERVICE CARD

Because if you designed your software, it would include only the functions you need. It would include Computer Aided Training for you and your staff, and would be backed by the most extensive software support network available. Only Pyramid provides this to you in the NumberCruncher™ series of software products. You decide which functions you need, then choose your system.

## NumberCruncher I™

AND

## NumberCruncher I™ jr

FOR THE IBM PCjr

NumberCruncher I™ provides you with full Text Editing integrated with a Spreadsheet System. You define your Spreadsheet exactly as you want, inserting text and numerics wherever required. Columns and Rows may be different sizes and do not need to be aligned vertically. No longer are you confined to a cumbersome column and row format. Finally, with one system you can create a report including a Spreadsheet or Projection that is suitable to present to anyone. No need to swap disks, re-type data, or cut and paste.

## NumberCruncher II™

AND

## NumberCruncher II™ jr

FOR THE IBM PCjr

NumberCruncher II™ starts where NumberCruncher I™ stops. In addition to Spreadsheet and Text Editing, NumberCruncher II™ provides you with Information Management and Table Driven Forms Generation. Now you can use your computer to fill in pre-printed forms, such as insurance forms, tax forms, loan documents, and escrow documents without the need to thumb through clumsy rate schedules. NumberCruncher II™ stores your rate tables. You can also create complete computer printed forms, such as invoices and purchase orders. And NumberCruncher II™ will store information from the forms created so that you can create summary management reports.

## NumberCruncher III™

AND

## NumberCruncher III™ jr

FOR THE IBM PCjr

The list of applications that NumberCruncher III™ can be used for is endless. It combines full Relational Data Base Management and Application Generation with all of the functions of NumberCruncher I™ and II™ in one completely integrated system. Your capacities are only limited to your disk size. Now your entire business can be operated around a single software "environment". You customize NumberCruncher III™ to fit your business, whether it be accounting, farm distribution, retail, or any other type of business. You know your business, and your computer should run like your business runs... not like someone else thinks it should. NumberCruncher III™ puts you in command of your computer and your business.

## NumberCruncher Series:

Your business changes on a daily basis. The NumberCruncher™ series gives you software that grows with your business. As your needs change, you can upgrade to another NumberCruncher™ system and receive a substantial credit for the NumberCruncher™ you have already purchased.

**Now, you have the software you need . . .**

## PC ROCKS AND ROLLS

He has equipped his office with PC XT and uses Lotus' 1-2-3, dBase II, and WordStar, among others. "With my computer I can do all projecting in 2 hours instead of 3 weeks. Now I don't have to carry around reams of paper and file folders. It's all sitting here on a few disks," he said.

In his office Littleton puts the PC through its paces, demonstrating to Tubes' lead singer Fee Waybill how the machine can display a detailed printout of tour costs, profits, and bookings. A "cost section" breaks down the expenditures on everything from sound to insurance. A "profit section" shows the concert guarantees, estimated grosses, and production support funds. And the "itinerary section" indicates the names of all hotels, airline information, and showtimes throughout the band's nationwide swing.

While Littleton uses 1-2-3 to compare projected and actual costs after each show, his public relations assistant uses WordStar to generate press releases for the regional press, record company reps and local radio jocks.

Littleton discovered computers before he began working in the music business. "I went to computer school in 1970," he explained, "But I left and began working with Toto. I got into computers because I wanted to make my job easier. I took the PC home, sat down, and spent a month with the DOS 2.0 manual. It was pretty easy from there. I initially wrote a simple line editing program out of the DOS manual for itinerary formats and budgeting."

Following advice from Entercom, a computer consulting firm with offices in both Redondo Beach and Nevada City, California, Littleton upgraded his office system to hard disk and explored software applications the company recommended. "Entercom, which specializes in the entertainment business, is opening up the computer to a lot of people in the music industry who want to use a computer to save time and money but don't want to learn to program," he explained.

Saving money hasn't always been the concern of road-weary rock and rollers who traditionally have spent their evenings hanging out in motel rooms, not fiddling with computer keys. However, some of today's pop stars are as concerned with tax shelters as they are with "Gimme

The need for portability has led rock band tour managers to take computers other than the IBM-compatible Compaqs on the road.

Shelter." Several of Littleton's clients have been smitten by the microbug. The PC has become a permanent resident at Toto band member Steve Porcaro's house. He is experimenting with musical notation applications. And Tubes' member Mike Cottrell used an Atari 800 to design his band's costumes, set and prop projections, and layouts. In fact, he used the computer printout to convince David Bowie that the band's elaborate stage show could be accomplished on schedule without interfering with the star's appearance at center stage. As a result, the Tubes was selected as the opening act for Bowie's worldwide tour last summer.

### On the Road

These applications may be ideal for home and office, but rock and rollers need micros on the road as well. Littleton is currently gearing up for an extensive spring road tour with Toto that begins in March, so he has purchased a Compaq for the mobile computing chores. He has even had a customized traveling case made, which holds the micro, a printer, a mod-

em, the software and a photocopy machine—virtually his entire home office is now on casters. And, if all goes well, next time around the PC itself may hit the rock and roll trail.

The need for portability has led rock band tour managers to take computers other than the IBM-compatible Compaqs on the road. Music business accountant Neil Quateman of Beyond Management, in North Hollywood, California, took his Kaypro II on the road with The Who last year and later upgraded to the Kaypro 10 (10-megabyte hard disk) when he accompanied the Stevie Nicks/Joe Walsh tour. In both trips he evaluated the latest reports on ticket sales, advertising, security, and hall rental en route to the show. After the performances he used the computer to finalize settlements with the promoter's representative and others involved in putting on the concert. Quateman uses a Gemini 15 wide-carriage, dot-matrix printer; a Novation modem; and an electronic mail service to telecommunicate with the home office.

"When a production manager is trying to decide whether to use buses or planes to transport the tour members, I can generate cost comparisons more quickly. I use the computer to provide itineraries, letters, cost comparisons, and pay schedules," Quateman reported. "The musicians like seeing me work at the computer. It gives them a feeling of confidence. They know I'm doing a good job," he added.

Osbornes, Apples, and even Fortunes are hitting the road with touring bands these days. However, according to Entercom, the trend is toward IBM and compatible machines.

Entercom is currently recommending IBM and Compaq systems for use by rock bands in the office and on the road. Entercom vice president Dan Cooper used these computers last summer on the road with The Police and more recently with the rock band Black Sabbath in Europe. Also, at Entercom's suggestion another tour manager, Mike McGinley, recently switched from a Kaypro to a Compaq for

## PC ROCKS AND ROLLS

his current worldwide travels with the group Supertramp.

### Portable Database

While on the road last year with The Police, Cooper was hard at work developing a rock tour database, which appears to be the application that the rock and roll caravans require most often. It covers everything from limousine rentals to hotel addresses and rates, stage hands, and venue statistics. In addition, the company is currently developing a historical record for concert promoters that will reveal how well particular rock bands and genres (that is, heavy metal, punk, rhythm and blues) have sold in any particular site, thus creating the rock industry's first survey of regional concert preferences and tastes.

Cooper's configuration includes the Compaq, an Epson printer, PC Modem Plus, and such software as *dBase II*, *Multiplan*, *Multimate*, and *Lotus' 1-2-3*. "Using the computer resulted in better, more efficient communication," he reported. "It eliminates the mundane tasks. Several years from now all tours will be automated." Then he added cautiously, "I'm so involved in it that maybe I'm a little overconfident."

Maybe not. Jay Hagerman, an independent tour/account manager who contacted Entercom, has traveled with some of the biggest names in the rock business from Bob Dylan to Paul McCartney and currently armed with a Compaq, he is concert coordinator for the Supertramp world tour.

"In terms of outdoor shows, there are a tremendous number of expenses—much more than in an indoor show. On many occasions you're given a certain figure for an expense, let's say for stage hands suddenly things change. With the computer, I am able to revise figures instantly."

"In addition," Hagerman continued, "Entercom furnished me with an electronic mailbox on The Source for The Who tour. I had a Lex acoustic modem. At the end of an evening, when I had completed the settlement with the promoter, I used

the computer to transmit a copy of the settlement into the agency's electronic mailbox. The following morning, it would access The Source and take out a copy of the settlement for their records and also one for The Who's accountants."

Why the move to the Compaq? "Because the Compaq has a built-in modem, I can directly communicate with another

Most of the computer action on the road is limited to the big names in the world of rock.

Compaq or any IBM PC," explained Hagerman.

Dave Furano, president of Entercom, reported: "The word from the tour was that the Compaq was dropped, abused, used on international power supply, and literally used all over the world in a very rugged way. It still worked like a charm." He compared the selection of MS-DOS format machines to the record business, and added, "It's like the decision to go to a 33 $\frac{1}{3}$ -rpm or 78-rpm or 45-rpm recording. An artist can write and format programs and have them reproduced in the broadest possible sense."

### Eastwind Computer

Eastwind Computer Systems of Marina del Rey, California, is also gearing up for the computerization of the rock business with the idea of IBM compatibility in mind. For road use, it recommends the Compaq computer with a Hayes Super Modem, *dBase II*, *WordStar*, *VisiTrend*, *VisiPlot*, and a Microprism printer.

Why are the rock and rollers turning to IBM? Eastwind's president, Ian Moss, who has toured with groups including the Beach Boys and Ricky Nelson, replies: "Probably the same reason the rest of the

business is going in that direction. It is our belief that IBM will become the standard within the entertainment industry... as well as at home."

Eastwind is creating its own database file on concert venue specifications, details such as the height of the risers, lighting setup, hall amperage, even the size of the back door. These custom files will be listed with The Source and, as a result, will be accessible 24 hours a day. Other applications software the company is recommending are *VisiCalc* (to simplify box office procedures), Microsoft's *Time Manager* (which serves as an electronic schedule book for PR events, interviews, etc.), *WordStar*, with *SpellStar* and *Mail-Merge*, and *dBase II*. However, with 600 facilities soon to be listed on the company's database, Moss explained, "They'll only need a modem and the ability to go onto The Source. They won't need a database program for long."

While the database is being compiled, Moss and his associates are still hard at work with their office XT. Eastwind is currently planning a road tour for disco star Taco, whose rewrite of the Irving Berlin hit "Puttin' On The Ritz" is riding high on the *Billboard* dance charts. According to Moss, they were using the hard disk computer to design the entire road tour—using everything from *VisiCalc* for spreadsheets on cost analysis to The Source for airline information and hotel and restaurant addresses in their target cities. The XT interfaces with an Epson MX 80 printer and a NEC green screen.

"We're not married to any format," Moss added. "If we find that one of the new generation of portables can do the job better we'll go with those instead."

While most of the computer action on the road is limited to the superstar range, rock stars of the future can also get a taste of micros. A series of new "working band" programs is being distributed by Passport Designs, Inc., of Half Moon Bay, California, a small town on the ocean side of the San Francisco Peninsula. The

# THE TOWER OF BABEL CONQUERED!

## Direct Disk-to-Disk File Transfer with Xeno-Copy PLUS<sup>®</sup>

In the Old Testament, ambition and pride resulted in the Tower of Babel where no one spoke the same language. In Modern Times, the microcomputer industry achieved the same result without divine intervention. But you can conquer the Tower of Babel with Xeno-Copy PLUS. Your PC can read and write 50 disk formats. Suddenly, all those different computers can talk to your PC, and to each other, **without modems, serial links or additional hardware.** All you need is the disk.

No modern madness with Xeno-Copy PLUS! Just insert a "foreign" disk into your PC's drive, view the directory, select the desired files and make the copies - fast (16K well under 1 min.). Transfer program and data files between computers. For example, import a TRS-DOS file to your PC disk. Then, export the file by writing it to a Kaypro II disk. Imagine the flexibility!

Xeno-Copy PLUS supports most double-density CP/M (-80 & -86) formats, TRSDOS, p-SYSTEM, NECDOS, Turbados and others. "ADVANCED" option adds 96 TPI and single-density formats (with compatible hardware), plus the ability to handle extra formats when you enter the individual disk parameters.

Xeno-Copy	Read foreign disks to import files	\$ 99.50
Xeno-Copy PLUS	Read AND write 50 foreign disk formats	\$149.50
Advanced Option	96TPI, single-den., enter disk parameters	add \$ 50.00

Xeno-Copy PLUS runs under DOS on the IBM PC/XT, Compaq, and most other compatibles with 128KB memory. Also available for DEC Rainbow, VT180 and other selected computers. PCjr. available soon. Ask about new formats, features and hosts.

## TURN YOUR PC INTO A DISK PRODUCTION MACHINE FOR \$379.50

Are you a software developer, small publisher or responsible for different computers in your organization? Do you need to produce different disk formats, but can't afford solutions that cost \$1,500, \$5,000, \$10,000 or even more? Forget the big bucks! For \$379.50, the Xeno-DISK Software Development System allows you to import and export disk files plus initialize blank disks in foreign formats. Also includes fast foreign disk duplicator and text/data filters. No... it won't replace one of those big expensive machines... yet.

### THE ORIGINAL KEYFIXER<sup>™</sup>

No one else can imitate our unique "hole in the middle design" which DOES NOT INCREASE KEY HEIGHT over other keys. Precision molded to fit ENTER, both SHIFT keys, TAB, BACKSPACE and others. Increase keyboard accuracy and reduce fatigue while retaining that "IBM original equipment" look. Thousands of others already have! A SET OF FIVE is only \$14.95.

## PC ROCKS AND ROLLS

company, which is noted for its musical synthesizer programs for the Apple II, is developing business software for professional musicians. It has announced three IBM-compatible programs: *Pickers & Pickers+* (for band scheduling, logging of income/expenses, personal inventory, and credits); *Writers & Writers+* (for song lyrics, royalty income, expenses, and song classification), and *Tour & Tour+*

The band members weren't interested in knowing anything about a program doing numbers... although their manager certainly was.

(for coverage of club and arena data/income/expenses, promotional income/expenses, contract information, fan mailing lists, and equipment inventory).

Do the musicians appreciate the micro-power that is keeping their tours on schedule, balancing their books, and keeping them from going belly-up? The answer is yes, at least as much as they appreciate a vintage Fender Stratocaster guitar.

On The Who tour, Hagerman introduced the band to the microcomputer. "They wanted to know, 'What kind of games can we play on this.' When I told them, 'No games on this machine,' they weren't interested in knowing anything about a program doing numbers... although their manager certainly was."

Fee Waybill of The Tubes—after witnessing Chris Littleton's proud demo of his office PC—said he liked the itinerary section of the program best. "The other guys in the band, though, they just throw the itinerary away. They figure it's always out of date. They don't care where they're going next," he shrugged. ■

## With T.I.M.® IV, Your Micro is Bigger Than You Thought.

Make no mistake about it, T.I.M. IV is not just another update. It's a brand new version of the popular data base for executives. In fact, T.I.M. IV will make your micro-computer more powerful and versatile than you ever thought possible.

For openers, T.I.M. IV has relational capabilities. That means saving time because now a single entry allows the computer to work with other files simultaneously. And T.I.M. IV also has a special menu by-pass routine. It's perfect for the sophisticated user who wants to get down to business quickly.

In addition, the designers of T.I.M. IV have made it easier than ever to handle tasks like generating

mailing and customer lists, tracking inventory and accumulating invoice records. T.I.M. IV can even take on basic accounting functions.

But with the changes, T.I.M. IV still retains its plain English commands and interface compatibility with VisiCalc®, MultiPlan™, 1-2-3™ and SuperCalc™ II systems. No wonder so many Fortune 1000 companies continue to select T.I.M.

See all of T.I.M. IV's new features at your local computer dealer. You'll be pleasantly surprised at just how big your computer really can be...

Be sure to ask your dealer about FAST GRAPHS, the full color

business graphics package and FAST FACTS, the filing system for both home and business executives.

Innovative Software's products are at Computerlands®, Computer Marts, Entre Computer Centers™, Xerox Stores, Sears Business Centers and other quality dealers. For information call **1-800-255-0470**. CIRCLE 272 ON READER SERVICE CARD

# The PC Analyzes The Wind

Windmills, long considered obsolete, have begun to reappear. The PC helps determine a site's wind farm potential.

**R**emember windmills? From the 1920s to the early 1950s, they were a familiar sight in rural America where they frequently were the single source of electrical power. But by the 1950s, power lines were finally spread to remote farm areas, bringing cheap electricity. This hallmark of progress made windmills obsolete.

It appeared to be the end of an era, but now, with sophisticated wind technology and a little help from the IBM PC, windmills may be returning. Increased oil

prices and tax incentives have spurred the investigation of wind power as an alternative energy source. Wind farms, huge collections of wind turbines, are currently operating in a number of locations around the country. But this business is as capricious as the wind itself, and wind power has not yet established itself as a widespread alternative source of power.

The main obstacle the wind power developer encounters is locating a suitable site for a farm, which requires constant high-speed winds.

## PC WIND ANALYZERS

Second Wind, in Somerville, Massachusetts, has developed a product called the AL-2000 Wind Resource Data Logger, which determines if sufficient wind exists on a given site to warrant the construction of an expensive wind turbine to capture the wind and generate electricity. Second Wind sells its customers this little black box, filled with electronic gear that registers various aspects of the wind and records the data on a 1-inch chip. It then analyzes the chip using an IBM PC and provides the customer with a report.

### Selecting a Wind Site

Before a potential wind developer decides to buy the data logger, he must select a site to be evaluated. Common sense often dictates what to look for. Hills are good; ridges are even better. Both will lift your wind tower to greater heights, but, remember, much of the wind flow may pass around the sides of hills. Most of it goes over the top of a ridge, especially if the ridge is perpendicular to the major wind direction.

Seacoasts and mountain gaps are excellent sites; so are valleys that lay in the path of prevailing winds. Nearby trees or buildings cause a turbulent wake that can interfere with a turbine's operation. Complex formulas have been developed to inform wind users how high to build their towers over grass, trees, buildings, and other obstacles to avoid the wakes. But the rule of thumb is that the center of the turbine's rotor must be at least 30 feet higher than any obstacle within 300 feet of the tower. A tower placed downwind from a building should be at a distance 10 to 20 times the height of that building.

Though these factors will help the wind developer evaluate a site's potential, they can't possibly accurately determine its eligibility. According to Mike Sacarny, vice president and engineer at Second Wind, "Almost everyone overestimates the amount of wind he gets. In most parts of the world, you might get strong winds 3 or 4 months a year and not enough during the other 8 months."

Once the developer has assessed a site's potential, the next step is to purchase the \$1,600 microprocessor-based Data Logger from Second Wind. The black box, which measures 8 by 10 by 4 inches and comes with an anemometer, is placed on the site to be evaluated. The box has read-out windows with 15 display panels

The Data Logger, manufactured by Second Wind, sells for \$1,600.

with labels such as "velocity distrib" and "wind rose." (According to the product's instructions, wind rose is the amount of time that the wind persists from each of the eight directions of the compass.) The box has a plastic cover to protect it from the elements; if left uncovered, water may damage it irreparably.

Some users read the data off the box's recording device every few weeks, but most allow it to operate for a few months or even a year before mailing the 1-inch chip back to Second Wind to be analyzed by the PC.

### PC Analysis

Second Wind didn't always use the IBM PC for data chip analysis. "We used to use a mainframe to analyze our data," notes Sacarny, "but it was not here in our office, so it was inconvenient. We need to have our data here, stored on our diskettes, so we can run them any time we want. With the PC, we can do that. With the mainframe, we often found other people in our way. We couldn't kick off other users, so sometimes we couldn't work when we wanted to. Also, when the mainframe went down, we were dead. If our PC goes down, we can rent another one immediately. And, with the PC, we can

experiment and get just exactly the peripherals we want. That isn't possible with a mainframe."

Sacarny himself feeds the data into the PC using an Erasable Programmable Read-Only Memory (EPROM) reader, which interfaces with the PC RS232 port. Using Pascal programs written by Sacarny, the data for each site—wind direction, power, velocity, peaks, and lulls—is processed by the PC and printed on an Oki-data printer. The process takes only a few seconds. Second Wind will provide the customer with bar and circle graphs illustrating wind patterns. These are produced using an attached HP 7475 color plotter.

To begin the PC analysis process, Sacarny pushes the 2K- or 4K-chip, fresh from months in a mountain pasture, into his EPROM reader (which was manufactured by Bay Technical Associates and modified by Sacarny to make it compatible with the IBM PC). Sacarny has developed a software package called *The Archiving Utility* that retrieves the data from the chip and stores these numbers on a diskette.

Sacarny has also developed two other pieces of software to analyze wind numbers. One, the *GETWIND*, puts the wind data for each site into an elaborate Pascal record. The third piece of software, *Data Interchange Utility*, is a program that puts the wind site data into a DIF file. (For a discussion of DIF files, see "What's The DIF?" in this issue.) His software has been developed for the PC because he owns one and so do some of his customers. Second Wind sells this software to its users so they can analyze their own chips.

After the PC retrieves the numbers from the 1-inch chip and stores them on a diskette, it produces a printout (see Figure 1) of columns of figures indicating how hard the wind was blowing on a given site, the direction the wind was coming from each hour, lulls and their duration, peak wind speeds, and the average wind speed.

Some customers take the printouts and

## PC WIND ANALYZERS

examine the results themselves to determine whether the site could be an efficient producer of electricity, while others ask Second Wind to do the analysis. This analysis entails converting the wind speeds for a given site into an estimate of the kilowatt hours that would have been produced by a wind turbine of a given size during the data-gathering period. For example, a 2-kilowatt machine operating for 6 months in average winds of 20 mph will produce 4,550 kilowatt hours.

Kilowatt hours represent dollars the wind farm developer could earn if he put up a windmill of a given size on a particular location and sold electricity to the

Wind machines in the same area can produce very different results. You have to find out where the wind is.

power company. The price per kilowatt hour paid by utilities to purchase electricity varies across the nation.

At present, Sacamy performs these calculations—converting columns of wind velocity figures into kilowatt hours—with a hand calculator. But he is designing a software program that will enable his PC to perform this task for him.

"The purpose of the chip analysis is to get the wind data in a form where you can use it with applications programs," he explains. "If you know the productivity of the turbine, and you know at what times you can produce power, then you already have a good chunk of your economics done for you."

"If you were able to look into one of our chips, what you would see is rows and rows of numbers. Our software programs suck the numbers off the chip, puts them into archive data, and then arranges the

MONTHLY AVERAGE WIND SPEED: 17.81 MPH

Second Wind Inc.  
7 Davis Square  
Somerville Massachusetts 02144  
(617) 776-8520

Figure 1: The PC "reads" the data chip from the Wind Resource Data Logger and generates velocity, wind rose, and diurnal data. This particular report is for a turbine site in Endless Mountains, Pennsylvania.

archive data into a big Pascal record in a usable form.

"Once the client can see how many kilowatts could be produced at a given site at each hour, he can determine whether or not the economics justify the investment in a windmill at that location."

The wind developer then uses the resulting printouts and graphics to convince potential investors of the merits of his proposed wind farm.

Sacamy also uses his PC with WordStar to produce technical manuals and instructions for Second Wind's equipment.

### The PC Watches Windmills

In the summer of 1982, NFC Energy Corporation, a power company in San Francisco, mounted a dozen AL-2000 Data Loggers on trailers and moved them about their leased 1,500 acres in the Alta-

# The Datacom 1200™ modem. Hayes® plug-compatibility and a savings of \$300.

Why spend \$700 on a Hayes Smartmodem 1200™ when the Datacom 1200 modem performs like a Hayes for \$399.

## HOW WE MADE A "HAYES PLUG-COMPATIBLE" AFFORDABLE.

The use of highly advanced CMOS technology enabled us to incorporate all the Datacom's functions onto one board, compared to the two boards in the Hayes.

**The Datacom 1200 modem**      **The Hayes Smartmodem 1200**

The heart of a 1200 baud modem is the decoding and filtering circuitry. The Datacom 1200 uses a filter chip controlled by a CMOS microprocessor for modulation and demodulation. This one chip deftly performs the tasks that require many chips in other modems. In addition, VLSI (Very Large Scale Integrated) technology allows to combine our modem's microprocessor, ROM and RAM onto one control chip.

By reducing the Datacom's chip count, we dramatically reduce its cost.

Another benefit of CMOS technology is increased reliability. CMOS chips require less power and give off much less heat than TTL components. CMOS also makes the Datacom less susceptible than other modems to Radio Frequency Interference.

## THE TRUE TEST OF PLUG COMPATIBILITY IS SOFTWARE.

The Datacom 1200 is compatible with communications software written to recognize the Hayes Smartmodem 1200™; Crosstalk™ Data Capture™ even Smartcom II™ Hayes' own software program. In fact, you can replace a Hayes modem with a Datacom modem and your software will never know the difference.

## COMMUNICATIONS SOFTWARE INCLUDED

To provide a complete communications system for IBM PC and Apple IIe owners, the Data Capture software is included with the Datacom 1200.

## IT TOOK EXPERTS TO CREATE THE DATACOM 1200.

The Datacom 1200 is manufactured by one of the world's major sources of OEM modems. Last year alone, they built over 120,000 modems for major computer and communications companies.

Now, Kensington Microware, a leading supplier of personal computer products, brings this state-of-the-art modem to you.

The Datacom 1200 is FCC registered and comes complete with a two-year limited warranty.

If you're looking for the best buy on a modem, order a Datacom 1200. It's the modem you've always wanted, at a price you can finally afford.

## RISK FREE OFFER

The \$399 Datacom 1200 modem is available at your local dealer or direct from Kensington Microware Ltd. with a 30 day money back guarantee.

Order by phone (212) 486-7707 or complete the coupon below and send your check, money order, Visa or MasterCard No. to Kensington Microware Ltd., 251 Park Avenue South, N.Y.C. 10010.

## PC WIND ANALYZERS

mont Pass, 30 miles east of San Francisco, leaving them on each site for several weeks. It was a search for high-quality wind.

At each location, the data logger measured wind direction, velocity, and endurance and stored this information on its chip. Most of the chips were mailed back to Second Wind for retrieval and analysis, but some were analyzed in San Francisco by NFC meteorologist Ron Nierenberg.

Throughout the summer and fall, Nierenberg was frequently on the phone with the folks at Second Wind discussing data from the PC runs. On the basis of wind data gathered from these hundreds of potential sites and then analyzed by Second Wind's PC, NFC determined precisely where to put up 60 huge 75-kilowatt turbines. They are currently under construction and will be operating in the Altamont Pass by spring, producing electricity that will be sold to Pacific Gas & Electric (PG&E). Another 100 turbines will be installed on the NFC wind farms by the end of 1984. The sites for these, too, will be determined by Second Wind's analysis of the Data Logger chips.

"Second Wind's Data Loggers are rugged," says Kenneth Cohn, director of technical services at NFC. "And their analysis of chips was invaluable to us. Using the trailers with the anemometers and the data loggers saved us a lot of time and tower building. It's an ideal way to check out a lot of sites for efficiency. You do have to be careful in this business. Wind machines in the same area can produce very different results. You have to find out where the wind is."

"Our goal is to produce energy that has the same characteristics as that from any other type of generating station," says Cohn. "To do that, we need to know the wind characteristics throughout our property and what times of day we can expect peaks and lulls."

"It's an engineering process. This is a business of extracting energy from the wind."

Cohn uses the information from the PC analysis of his sites not only as a guide to placement of windmills, but also as a means of convincing prospective investors of the profitability of proposed wind farm locations.

He has just purchased an IBM PC for the NFC office in San Francisco and the company will do some of its own chip archiving and analysis there, using the software packages designed by Sacamy.

But the major reason NFC purchased a PC is that Cohn intends to have it watch over the windmills. He plans to have the PC continuously monitor, via phone lines, the performance of more than 200 NFC wind turbines and generators located 30 miles away in Altamont Pass. The PC will record the performance of each of these turbines on the NFC wind farm, computing precisely how much electricity they generate for PG&E each hour.

NFC expects to have the interconnections made, the PC software designed, and the windmills up and running by late spring.

"It should work well around the clock and save a lot of manpower expense," says Cohn.

### Wind's Future

The future of the wind business is uncertain. It is only in the past few years that the giant wind farms have been con-

The Altamont Pass wind farm, near San Francisco.

# 31,268 flavors isn't just a dieter's nightmare.

If you want the world's best microcomputer database management system to handle the most complicated inventory control problems, here's the scoop:

dBASE II® the relational database management system (DBMS) from Ashton-Tate.

If you have a microcomputer and you'd like to put all your business information management problems on ice forever, you won't find a faster, better, more powerful solution than dBASE II. And it's just \$700 (suggested retail price).

For the name of your nearest dealer, drop us a line. Ashton-Tate, 10150 West Jefferson Boulevard, Culver City, CA 90230. (213) 204-5570.

## REAL ESTATE

Think about it. The program that answers your questions is here!

- Decide on the BEST investment from up to 30 investment choices.
- Discover the optimal financing package from up to 5 alternatives, each with up to 3 mortgages.
- Compare residential and commercial investments on the same scale, even if they're on opposite coasts.
- Analyze the contribution to Total return from:

We use graphics to enhance interpretation

Introducing the REIM... (Real Estate Investment Index Method, pronounced: "RIME")

The REIM is a breakthrough in analytical technique that makes the complicated "bundle of returns" from an investment in Real Estate as easy to interpret as the interest rate on a savings account.

The REIM's fully integrated programming also includes:

1. Capacity for Billion Margins to be paid or reinvested. Wrap Arounds. Interest only Assumptions. Points and origination fees. Carry backs. 10 year projections.
2. Calculations of benefits earned by reinvestment of cash flow from Cash Flow Off and Tax Shelters, as well as 10% and other common measures of return.
3. Comparison of net benefits from Straight-line vs. Accelerated Cost Recovery (ACRS).
4. Risk Adjustment of all cash flows based on pessimistic, most probable and optimistic scenarios.
5. Illustration of return in dollar amounts and 100%.
6. Calculation of return on "current equity vs. market value" to illustrate the impact of market inflation and equity buildup on return.
7. Reviews of spread and downward volatility for each investment choice.
8. State-of-the-art graphics and documentation to enhance interpretation.
9. Analysis and Ranking of an unlimited number of investment choices.

Runs on IBM PC 64K Dual Disk Drive, color graphics card optional, packaged in an IBM-type binder, coming soon on APPLE.

## PC WIND ANALYZERS

structed. Second Wind believes that a lot of wind turbines will be built in isolated rural areas. The technology of the turbines has become efficient enough now that it is economically productive to put one up if you have a farm or a home far from the power grid. But, you must have sufficient wind, a factor you can't control. The big wind farms will make money in areas

## The future of the wind business is uncertain.

where steady winds exist. But starting up the farms requires a substantial investment, and if the government were to cut back on tax breaks, starting new wind farms would become extremely difficult to finance.

The wind farms have not been operating for a sufficient length of time to determine if they will indeed produce megawatts of profit. But it appears that some of them will produce substantial power—enough to sell to electrical utilities. Whether sales to these utilities will produce sufficient profits remains to be determined. It does appear, however, that the future of first-rate wind measurement will be tied to Second Wind's PC analysis.

Site analysis and conversion of wind power into potential kilowatt bucks will be done in some firms with Sacumy's PC software.

If NFC's plan to have its PC continuously monitor the performance and kilowatt output of hundreds of windmills succeeds, it is likely that other wind farm companies will lay off the crews that now perform this task and replace them with IBM PCs.

Articles by James Brann have appeared in The New Republic, The Nation, Saturday Review, Science Digest, The Washington Post, and many other publications. He is a professor of journalism at Boston University's School of Public Communications.

# WOULD YOU SHELL OUT \$1000 TO MATCH WITS WITH THIS?

Meet your match. Meet Infocom games: perhaps the best reason in software for owning a personal computer.

In fact, people have been known to purchase computers and disk drives solely for the purpose of playing our games. And they haven't been disappointed. Because Infocom's prose stimulates your imagination to a degree nothing else in software approaches. Instead of putting funny little creatures on your screen, we put you inside our stories. And we confront you with startlingly realistic environments alive with situations, personalities, and logical puzzles the like of which you won't find elsewhere. The secret? We've found the way to plug our prose right into your imagination, and catapult you into a whole new dimension.

If you think such an extraordinary experience is worth having, you're not alone. Everything we've ever written—ZORK™ I, II, and III, DEADLINE,™ STARCROSS,™

SUSPENDED,™ The WITNESS,™ PLANETFALL,™ ENCHANTER,™ and INFIDEL™—has become an instant best-seller. For the simple reason that Infocom offers you something as rare and valuable as anything in software—real entertainment.

At last, you can fritter away your evenings playing a computer game without feeling like you're frittering away your computer investment.

Step up to Infocom. All words. No pictures. The secret reaches of your mind are beckoning. A whole new dimension is in there waiting for you.

(For more information on Infocom games contact: Infocom, Inc., P.O. Box 855, Garden City, NY 11530.)

## INFOCOM™

The next dimension.

For your Apple II, Atari, Commodore 64, CPM® 8, DEC Rainbow, DEC RT 11, IBM, MS-DOS 2.0, SGA, APX, NEC PC 9800, Osborne, TI Professional, TI 9900A, TOS-80 Model I, TOS-80 Model III

# Share and share alike.

## With SCS PCnet™, a true, low-cost network for IBM Personal Computers.

Share and grow with PCnet from Santa Clara Systems... the true local area network for the IBM Personal Computer (PC) and its MS-DOS operating System. PCnet allows the sharing of hard disks, floppy disks, letter-quality printers, modems, and internal memory by all networked PCs. So you can add new dimensions of capability to your system while reducing your per station costs!

### True network news

With its proprietary, on-board intelligence, PCnet permits direct communi-

cation between all PCs in your network. If one goes down, the others don't.

Unlike other network products, a dedicated disk server is not necessary, saving you money. In fact, no extra hardware is required to add more stations; just one PCnet board for each and you're set. Plus, PCnet is transparent to all IBM and compatible software.

### Service for thousands

You have plenty of room to grow. And, as you add more users, your peripheral resource power and memory capacity increase linearly. For all that it offers, PCnet is surprisingly easy to install. Just plug a PCnet board into an I/O slot of each IBM PC you want to include in your network. Then tap into the standard coaxial cable—offered in lengths of more than one mile with PCnet!

### The extras you'll like

You'll appreciate the specialized network utilities available with PCnet. Like print spooling, multi-tasking, and file-locking. Plus the ability to communicate with IBM PC look-alikes. In addition, the Pascal Bubble™ is supported under MS DOS.

### Full customer support

Only Santa Clara Systems offers you worldwide support with PCnet. A full 90-day warranty. And a complete line of hard-disk storage products tailor made for use with the PCnet, featuring up to a 1/2 gigabyte of storage per PC and removable Winchester cartridges for backup.

See the difference sharing can make in your business. Our starter kit has everything you need to network two PCs right away—two PCnet boards, cable, and documentation. For more information, call or write us today!

# Adding It Up With StatPac

Now movies and veteran number crunchers alike have a versatile and convenient program to do statistical analogs based on a popular mainframe social science package.

**T**he statistical analysis package *StatPac*, produced for the IBM PC, is especially designed for survey data sets such as those developed for public opinion or marketing research. The program is modeled after the comprehensive and highly popular mainframe analysis package *SPSS* (Statistical Package for the Social Sciences).

#### **StatPac**

Walonick Associates, Inc.  
5624 Girard Avenue South  
Minneapolis, MN 55419  
(612) 866-9022

**List Price:** \$400

**Requires:** 128K RAM two disk drives.

CIRCLE 715 ON READER SERVICE CARD

*SPSS* was developed in the mid-sixties by a group of political scientists frustrated with the undocumented single-purpose programs they had been using to analyze public opinion surveys. Working at the nonprofit National Opinion Research Center (NORC) at the University of Chicago, they set about developing an integrated program package. With several scholars contributing to its development, *SPSS*'s capabilities grew rapidly. The finished program covered virtually every important statistical technique and data analytic procedure used in the social sciences.

By the mid-seventies, *SPSS* was installed on hundreds of mainframes throughout the world, not only in universities, but also in private corporations,

government agencies, and data tabulation service bureaus. The success of *SPSS* was so great that it threatened the nonprofit status of NORC, which was forced to sever the relationship. *SPSS, Inc.*, was then created as a private corporation.

*SPSS* came to be used as a general-purpose tool for doing all kinds of data analyses on all kinds of data sets. In addition to opinion, attitude, or marketing surveys, computerized analyses can be done on personnel records, economic time series data, medical histories, results of laboratory experiments on mice, archeological data, voting records of congressmen, student test scores, and customer, membership, and subscriber lists—in other words, analysis can be done on any data

set containing numeric or attribute data.

### Filling a Need

Anyone familiar with *SPSS* will immediately feel at home with *StatPac*, although the enormous range of programs and options provided by the large main-frame package will most certainly be missed. Nonetheless, by successfully bringing an *SPSS*-like capability to the PC, *StatPac* is filling an important niche. This package will be very much welcomed by the survey research community and by social scientists, statisticians, and others who want to use the PC to perform basic tabulations and statistical analyses.

*StatPac* is a batch system that can handle 5,000 cases and 255 columns of variables in either a fixed or free format, which means that the number of columns occupied by each variable can either be set by the operator or left "free" for the program to establish. A recently added feature that allows users to merge multiple files and codebooks makes it possible for a data analysis program to handle an infinite number of variables.

*StatPac* offers a wide range of such programs and also various data manipulation utilities, which enable users to sort files, write subfiles, select a subcategory of cases, recode variables, and compute composite scores and indices.

The package, which consists of a three-ring binder manual and three single-sided disks, requires 128K RAM, two disk drives, a line printer, and either a color monochrome monitor. It may be configured to run with a RAM disk or a hard disk.

Clear and well written, the *StatPac* manual is exceptionally considerate of the novice user and is sensitive to what the reader needs to know each step of the way. The manual needs no index—the table of contents alone is quite adequate to quickly guide you to the proper section for just about any inquiry you may have. Although a well-written background review of each statistical procedure is included in an appendix, the proper use of

the more advanced techniques does require the appropriate technical background and training. *StatPac* will help you do statistics; it does not attempt to teach the subject. It does not, moreover, spell out everything you might wish to know—how to obtain a correlation matrix, for instance. Nevertheless, the basic data analysis tasks are straightforward and easy to implement.

Ease of editing and the use of menus throughout make the system easy to operate. There are many considerate touches such as noncryptic screen prompting, the option to move the SHIFT key to its normal typewriter position and periodic automatic saves during codebook development.

All screen-directed operations are fast and thoughtfully designed. Tabular results, however, are not available for screen viewing—all analytic output is sent to the printer. This means that you can set things up conveniently, develop a control program to specify a lengthy sequence of analytic tasks, press the ENTER key, and then go to lunch. Execution times are quite slow with *StatPac* and tables are produced on the printer only every few minutes. You needn't worry, however, if you leave the PC during the analysis phase. (It might be wise, however, to stay within earshot of your printer, unless it is exceptionally reliable). If the system cannot perform a particular task because of a format error or an insufficient number of cases, it will not hang up. Instead, it will simply go on to the next item in the control file. You will need to check the tables later, however, to identify any skipped tasks since error messages appear on the screen but not in the printed output.

### Codebook and Data Management

*StatPac* has three major components: procedures for the creation of a codebook, for data entry, and for development of control files that manage the batched data analyses.

The first step in using *StatPac* is to develop a codebook that describes the data

file format, customized headings, and the labels to be used for all variables and value categories. These headings and labels will appear on the various statistical printouts.

**StatPac will help you  
to do statistics; it  
does not attempt to  
teach the subject.**

The codebook program also offers options for the handling of missing data, provides for automatic column control during data entry, and has extensive error trapping and editing features. You can edit or add variables to an existing codebook and make a hard copy of the codebook for use in planning data analysis runs.

For the data file format that appears in Figure 1, a sample population was surveyed for 11 variables—age, sex, ethnic origin, and so forth. These variables are listed in the codebook. Each is identified as either alpha or numeric. The permissible responses for alpha variables are listed (for example, M and F for sex), and the number of columns that the value of each variable can occupy is fixed. The starting column for each variable is also indicated. These parameters then govern the data entry procedure—the order in which variables appear on the screen, the screen prompts, and so forth.

The data file management programs allow you to enter data directly from the PC keyboard by using *StatPac*'s second major component—its well-prompted data entry procedure. The prompts draw directly on the information you placed in the codebook, flashing the case number and the names of each variable on the screen in turn as you key in the data for each case. The program automatically screens the type and number of columns of keyboarded data. It will not accept a numeric value when the variable is an alpha symbol, and vice versa. If the variable requires a two-column value, the screen will not record the third item of a

three-column entry, nor will it advance to the next variable if only a one-column entry is made. For some reason, the periodic automatic save feature is not provided for data entry, although it is for codebook development. You can save manually at any time, however, with just one keystroke. It is also possible with *StatPac* to import data files developed by other programs including *dBase II* and *VisiCalc* or to have a datafile downloaded from a mainframe. *StatPac* has a variety of useful record search and editing features and can edit files larger than memory size. You can, if you wish, get a complete listing or data dump of the entire file or obtain a listing—but not a cross-tabulation—of only selected variables and/or selected cases.

The third major component of *StatPac* is a set of programs to create the task control file that describes the analyses to be performed and the tables to be printed. A single task control file can specify hundreds of tasks and can be constructed quickly and easily using several convenient features. For example, users can indicate a range of variables for a given task which means that if you are a manufacturer and want to see how many consumers described your product on 25 attributes included in a customer survey, you can request a set of frequency distributions for variables 1 through 25 with only a single keyboard command sequence. Control files can easily be edited and can, of course, be saved for future use.

### Data Analysis Programs

Although *StatPac's* data analytic task programs are only a small subset of those available in *SPSS*, they do cover the fundamental bread-and-butter needs of the survey data analyst. First there are the basic frequency distribution reports that you will probably run for all variables in the study. These reports are fully labeled, give both frequencies and percentages, and indicate the number of cases missing data. Figure 2, for instance, displays the frequency distribution of females and

males in a sample of 2,055: 720 and 1,335, respectively. The sample was 35 percent female, 65 percent male, and no respondent failed to indicate his or her gender. Responses were obtained from 100 percent of the sample.

Another *StatPac* task program, descriptive statistics, gives you a wide variety of summary statistics for any of the following variables: the mean; the median;

the mode, the standard deviation, the maximum, minimum and standard error of the mean; and the confidence limits around the mean.

Cross-tab analysis, which provides a table showing the relationship between two variables such as product usage and income, is one of the mainstays of survey work. As in *SPSS*, *StatPac* gives the num-

```

Figure 1: Sample page from a *StatPac* codebook.

ber of cases for each cell in the cross-tab table and also three percentages based on the column total, the row total, and the grand total. Unfortunately, you cannot suppress any of these if you want a simpler and less cluttered printout. Chi-square and

its associated probability are computed, as well as the contingency coefficient and Cramer's V. (For the meaning of these and related terms, see sidebar, "A Glossary of Statistical Terms," accompanying this article.)

In Figure 3, the same sample used in Figure 2 is broken down by gender and ethnic origin, and the two variables are cross-tabulated. Reading across the first row, we learn, for example, that of the 720 females in the sample, 285 are black, 330

## A Glossary of Statistical Terms

Here's a simple word guide to help you master the statistical lingo.

**Analysis of variance (ANOVA):** A way of assessing the average scores of two or more subgroups to see if the variation between the groups is greater than would be expected on the basis of chance sampling fluctuations.

**Chi-square:** A statistic often computed for a cross-tabulation to assess how likely it is that the observed relationships shown in the cross-tab table could have occurred merely by random sampling error.

**Contingency coefficient:** Similar to Cramer's V but less useful since the limiting value is not always +1 but varies depending on the number of rows and columns in the crosstab table (see Cramer's V).

**Correlation coefficient:** A descriptive statistic that measures the degree of relationship between two variables. The closer the coefficient is to +1, the more closely related are the two variables.

**Cramer's V:** A measure of the strength of association between two variables in a cross-tab table. Cramer's V can vary from 0 (no relationship) to +1 (perfect relationship). For Cramer's V, the limiting value is always +1, regardless of the number of rows and columns in the table.

**Cross-tab:** A table that displays the joint distribution of cases on two variables.

**Discriminant function analysis:** A technique to distinguish different groups based on their patterns of scores on a set of independent variables. In market research, this method is useful to com-

pare users of different brands in terms of their needs, attitudes, perceptions, product usage habits, and so on.

**Factor analysis:** A data reduction technique to see if a small number of general characteristics or factors can account for the relationships among a larger group of variables. It can be used, for example, to identify basic underlying attitudes, perceptions, or personality traits.

**Frequency distribution:** A listing of the number of cases that fall into each category or value of a variable.

**Mean:** The measure of central tendency commonly called the "average."

**Median:** The numerical value of the middle case, once all cases have been rank ordered from highest to lowest. Unlike the mean (or average), the median is not strongly affected by the existence of atypical extreme cases at either the high or low end of the distribution.

**Mode:** The value of the variable that occurs most often. It is possible, though not usual, for a frequency distribution to have more than one mode.

**Multiple correlation coefficient (multiple R):** A measure of the degree of association between a variable of interest and a predicted score for that variable based on a set of other variables (see multiple regression).

**Multiple regression:** A technique for predicting scores on the variable that the analyst is primarily interested in based on the pattern of scores on a set of two or more other variables. The variable to be predicted is called the dependent vari-

able. The various predictor measures are called the independent variables. Multiple regression can be used quite powerfully for causal analysis as well as for prediction.

**One-tailed significance test:** Used to test the researcher's explicit prediction that, on some variable, a specified group will be reliably higher than another group. It is legitimately used when testing a rigorously derived prediction or in go/no-go situations such as pharmaceutical or engineering tests designed to see if a proposed new product is superior to an existing product. The test is invalid for the vast majority of survey research situations, which do not involve committed prediction.

**Scatter diagram (or scattergram):** A graphics plot showing the relationship between two variables.

**Standard error of the mean:** The estimated standard deviation of the mean scores of an infinite number of samples of the size and character of the sample used in the study in question. Used to assess the extent to which the observed mean of the sample might deviate from the usually unknown true population mean.

**Standard deviation:** A statistic to describe amount of variation in a given population on a particular variable.

**t-test:** A test to assess whether an observed percentage or average-score difference between two groups is greater than what could be expected on the basis of random sampling error.

# The Next Generation Operating System

**QNX.** Literally the finest, fastest, most comprehensive PC operating system available. A true real time, multi-user, multi-tasking operating system that gives the user hierarchical files and 16 level task priorities. In addition to the standard set of over 60 utilities (including word processing, communications, "C" compiler and 8086 assembler ... **all for only \$650 U.S.**) the following products are also available.

**QDOC.** A sophisticated document processor.

Capabilities: automatic table-of-contents, indexes, footnotes, mailing lists, forms, etc.

**QSPELL.** A very fast multi-user spelling checker that has the unique ability to check spelling in real time as you enter or print text anywhere in QNX.

**QMENU.** A menu interface to QNX and your applications allows you to create your own menus as a front end to any application.

**QBASIC.** A basic compiler which supports structured IF THEN ELSE's, multi-line functions and separately compiled modules.

**QDOS.** A PC-DOS emulator which allows you to run many of your DOS applications as a task under QNX.

**QMAIL.** A multi-user messaging system. Features include registered mail, mail forwarding, sending to groups of users, etc.

## StatPac Demonstration

## FREQUENCY DISTRIBUTION: GENDER

Sex	Number	Percent
F = Female	720	35.0 %
M = Male	1335	65.0 %
Total	2055	100.0 %
Missing cases = 0		
Response percent = 100.0 %		

## StatPac Demonstration

## FREQUENCY DISTRIBUTION: ETHNIC ORIGIN

Ethnic origin	Number	Percent
A = Black	660	32.1 %
B = White	1140	55.5 %
C = Other	255	12.4 %
Total	2055	100.0 %
Missing cases = 0		
Response percent = 100.0 %		

Figure 2: Frequency distribution tables for two demographic variables.

are white, and 105 are "other." From the first column, we learn that 39.6 percent of all the females are black; 43.2 percent of all the blacks are female; and black females constitute 13.9 percent of the total sample. Similar interpretations can be made for the other table values by column and row.

If you want a close look at the relationship between two measures, *StatPac's* correlation program will print out an attractive and fully annotated scatter diagram plus a set of statistics.

Figure 4 is an example of a scatter diagram that plots reading comprehension scores against annual income. The interpolated line of best fit, which depicts the relationship of the two variables visually, is indicated by the pattern of three horizon-

tal dots sloping positively from left to right. The two variables are related positively, as the slope of the line suggests: As annual income rises, reading comprehension scores increase. Cases appear as asterisks, with each asterisk representing more than one case.

Unfortunately, *StatPac* falls into the same trap as SPSS when producing correlations. The default condition in SPSS prints out only one-tailed significance levels, which are, of course, grossly inappropriate except under the most rare research circumstances. Over the past decade, it is likely that thousands of SPSS users have been unaware of the actual default setting and have been misled by this error of judgment within SPSS. *StatPac* does not even offer a choice, but gives one-tailed signif-

icance levels only and without any warning to the user. (It should be noted that this problem does not occur in the t-test procedure, where both one- and two-tailed results are given.)

To obtain a correlation matrix in *StatPac* rather than a single coefficient, you must use the roundabout procedure of invoking the multiple regression program while suppressing all options except that for the single correlation matrix. This extremely useful capability is quite easy to do and works very well, but it is not brought to the reader's attention in the manual.

The multiple regression program is exceptionally useful and can handle up to 30 independent variables. A full set of output options is offered, including multiple R and its F-ratio; both B and beta coefficients with their significance levels; the standard error of the estimate; means and standard deviations for all variables; the simple, partial, and inverse correlation matrices; and a listing or partial listing of observed, expected, and residual scores. The stepwise regression procedure is not provided.

Other analytic programs in *StatPac* include the t-test for both independent or correlated data, one-way analysis of variance, and multiple variable response for convenient one-page summary output

The multiple regression program can handle up to 30 independent variables.

when a number of variables all have the same response categories.

### Execution Time

To find out how long it takes to execute the various analytic programs in *StatPac*, I made use of the data set for Figures 1 through 4, which consists of 2,055 survey

respondents, a fairly typical sample size for nationwide survey studies. Figure 5 shows that ordinarily, apart from multiple regression, a *StatPac* task will usually take about 3 to 5 minutes to run, including both execution time and the printing out of the table on an IBM printer. Descriptive statistics takes somewhat longer because the data must be sorted to determine the median. As shown in Figure 5, most of these tasks can be speeded-up with the use of a RAM disk. The 10 minutes required to produce a table for the multiple regression task without a RAM disk was reduced by 40 percent by the use of a RAM drive for the data storage disk. These times can be improved even further by putting both the system execution disk and the data disk on RAM drives and by making use of a print spooler. According to Walonick Associates, there should be no appreciable difference in execution time for multiple regression problems with a larger number of independent variables, since computations are performed as the data are being read.

Even though the *StatPac* execution times are slow compared to those of a mainframe, overall turnaround time may be better. In a large organization, your work may have a low priority compared to

Even though the *StatPac* execution times are slow compared to those of a mainframe, overall turnaround time may be better.

that of the corporate payroll or product-forecasting departments, for instance, and may well be delayed a number of hours before it's printed out. Then if you discover that you made a mistake and ordered the wrong tables in the first place, you queue up for another long wait. The situation is

Figure 3: Cross-tabulation table showing the breakdown of males and females for three ethnic categories in the demonstration survey sample.

often much worse when dealing with an outside service bureau where you might have to wait for 2 or 3 days before finding out that the service rep misunderstood your request for tabulations during a hurried telephone conversation.

### Improving the Product

Promised for the next version of *StatPac* is a breakdown program to produce various subgroup means; an aggregate program to permit operations on summary data; two-way ANOVA, nonparametric statistics; and a new data entry system that will feature full-screen editing and data entry validity checking against permissible values specified by the codebook. The next version will also allow you to end output to disk so *StatPac* tables can be edited and formatted by a word processor.

Based on my personal experience, all signs indicate that Walonick Associates has an unusually responsible attitude

toward its customers. During the few months that I have had this package, customers received a number of bug reports and were able to obtain upgrades on a disk exchange basis. Beginning January 1, however, the company began charging a nominal fee for upgrades (less than \$30).

Any user of *StatPac*, who has worked extensively with *SPSS* or similar mainframe systems is likely to have a rather lengthy wish list. Factor analysis, discriminant function analysis, and the capability to do graphics beyond just a scatterplot are my own particular priorities. Data entry verification and the ability to weight cases to adjust for known demographic biases in the sample would also be welcome features. On the whole, however, *StatPac* is a flexible and a well-designed tool. It is professionally crafted, comfortable to use, does all the basic survey analytic tasks, and does them well. ■

# Inside The IBM Museum

Big Blue's new office in New York City includes the IBM Gallery of Science and Art, showcasing works of art and scientific exhibits from computer history.

Ever since works of art purchased by Thomas Watson, Sr. were exhibited at the New York World's Fair in 1939, IBM has been involved with the arts. Over the years this corporation has funded many exhibits that have appeared in American museums.

In October, IBM inaugurated its new Manhattan office building. Within it is a bamboo-filled oasis in midtown Manhattan, called the IBM Garden Plaza, and a new museum, the IBM Gallery of Science and Art. This gallery will present science exhibits created by IBM and art exhibitions that would not otherwise have come to New York. Admission to the gallery is free to the public. It is open Tuesday through Friday from 11 a.m. to 6 p.m., and Saturday from 10 a.m. to 5 p.m.

"Innovation in IBM Computer Technology," the first exhibition in the IBM Gallery of Science and Art, displayed computer devices from the past five decades. Many of these examples have not been shown to the general public before.

The next exhibits to appear in the IBM Gallery will be "Printings and Drawings

Visitors are shaded by bamboo trees in the glass-enclosed IBM Garden Plaza.

from the Phillips Collection" (including Renoir's "The Boating Party") and "Reflections of Faith," an exhibit organized by New York's Museum of Folk Art. These will be on display through January 21, 1984.

IBM has assembled one of the world's finest collections of historical calculating machines and related artifacts. A special

gallery in IBM's Manhattan office now presents an exhibit from this collection, called "A Calculator Chronicle: 300 Years of Counting and Reckoning Tools." I. Bernard Cohen of Harvard University was IBM's consultant for creating the exhibit. Visitors must arrange appointments to see this exhibit by calling (212) 407-6212. (continued)

**1** Professor I. Bernard Cohen of Harvard (left) tells managing editor Barry Owen about the Schuetz Difference Engine, the first printing calculator, made in Sweden in 1853.

**2** A Holorith Tabulating Machine built in 1890 to tabulate the results of that year's national census.

**3** The IBM 2314 disk storage system used with the IBM 360, the major system of the 1960s. This unit has four disk packs, each with 25 million characters of storage. The pile of paper behind this hardware is a printout—not quite complete—of the 360's operating system.

**4** The IBM Kanji keyboard, developed in 1979, has 254 keys, each with at least 12 characters. This is a standard device used to input Japanese texts to be printed or displayed.

**5** The large machine is a Thomas Plano Arithmometer, constructed for the Paris Exposition of 1855. This elegant device was the first calculator to be produced commercially.

**6** Part of the IBM 3850 mass storage system, which was introduced in 1976. Each hole in the honeycomb panel contains a cartridge with a reel of magnetic tape that holds 50 million characters of information. The moving picker arm can access any cartridge and transfer its data to a disk for on-line use.

**7** A memory array for the IBM 705, produced in the late fifties. This device provided 280,000 bits of storage in tiny magnetic cores, which IBM manufactured with adapted pill-making machinery.

**8** The IBM 3340, produced in 1973, was the first device to use Winchester disk technology. These disks could store over 1.7 million bits per square inch, twice the density of previous disks. ■

# PICK UP WHERE IBM® LEAVES OFF.

Portable or desktop, you're way ahead when you pick up a **corona pc.**™ Because we give you everything you've ever wanted in an IBM®-compatible PC and more. For a great deal less.

## COMPATIBLE AND MORE.

Our systems run all software that conforms to IBM PC programming standards. And the most popular software does.

We deliver twice the memory, with room for eight times as much.

We deliver a fast-access 320K floppy drive, a communication port and an improved IBM PC keyboard with indicator lights.

Our systems include high-resolution monitors (12" desktop, 9" portable) for crisper, cleaner displays, and both have built-in high-resolution graphics (640 x 325).

You get a complete system, ready to go to work.

## MORE VERSATILITY.

With all the necessary features built into the main unit, the four expansion slots can be used for your special needs. For example, color or our optional 10MB hard disk.

## MORE SPEED.

Our RAM-disk software gives you temporary disk-type storage that works many times faster than disks.

## PLUS SOFTWARE.

Our systems come with the operating system: MS-DOS.<sup>2</sup> A programming language:

GW BASIC.<sup>2</sup> A training course: PC Tutor.<sup>3</sup> A professional word processor: MultiMate.<sup>4</sup> Plus DOS utilities and demonstration programs. Or you can get the p-System<sup>5</sup> from N.C.I. and write or run portable Pascal packages.

## ALL FOR A GREAT DEAL LESS.

Even with all the extra features and performance, our systems still cost significantly less than the equivalent IBM PC.

Drop by your nearest **corona pc** dealer for a very convincing demonstration. Or contact us at 31324 Via Colinas, Westlake Village, CA 91361. (213) 991-1144 or (800) 621-6746 toll-free. Telex 658212 WSLK, in Europe 76066 CDS NL.

# A VisiCalc Start-Up Planner

Business executives can prepare for the start-up of new branches, departments, and markets, and monitor sales staff, with the aid of this versatile spreadsheet program.

**T**he following material is reprinted from Chapter 13 of *Executive VisiCalc for the IBM Personal Computer* by Roger E. Clark, published by Addison-Wesley Publishing Company. The book explores VisiCalc and suggests a myriad of unique business applications for this program. This chapter puts VisiCalc to use in planning business start-ups.

The author, Roger E. Clark, describes himself as a "VisiCalc maven." He has worked as a dealer in one of the earliest computer stores and as a partner in a management/marketing consulting firm. He cofounded Intercalc, a VisiCalc users group.

Planning ahead occupies a lot of executive time in companies large and small. Often this outlook to the future is dependent on interrelated events. In this chapter, we are going to develop a useful function: that of being able to change the start date of an event with one keystroke,

and immediately seeing the result of the change on other, related activities. The principle is fairly simple, and while our example is going to be equally simple, you should be able to see many extensions of the function for your business.

In Figure 1 you will see two layouts, apparently of the same information. However, the top one, . . . from rows 12 to 24, deals only with evaluating the months and the start dates, while the bottom half is the actual report that would be printed out, which contains the implications of the start dates and their manipulations.

Our hypothesis here is the planning for

the opening up of some eastern markets by a company, let's say for a test market. Since the hiring of new people is such a chancy thing, we want to be able to examine the contribution in revenue depending on the order in which the new salespeople are found, trained, and go to work. It is assumed that the sales department has given us the forecast for each market, the going rate of sales that can be expected when the market is up to speed. We want to factor in a somewhat slower rate of sales for the first few months, when the salesperson is also getting set, and then we want to be able to adjust the start dates according to the way the hiring is going.

The first column contains the dynamic figures, the ones you play with; they represent the start month, January being 1 and so on. We will go through a cycle, just to see what happens, and the formulae that give the result. As you can see it is working okay, as in our illustration we have

## START-UP PLANNER

projected each of the eight markets being hired one after the other a month apart. You can observe that New York, planned to open in month 1, has that indication in January; similarly, Buffalo, planned for August, has its 1 under that month.

The second column contains the sales department figure for the going rate of sales expected from the markets when up and running. Note one other thing: above the month label is a value entry, the month number. This is required for the formula that does this little task of carrying out the start date. The first formula that does this, taken from location D17, is:

@IF(D14=A17,D14.0)

**Narrative:** If D14, the month number above, is equal to the start month selected in A17, then carry over the start month, otherwise insert zero. As you can see, the effect on Albany will be the latter.

In E17, the formula is . . . different:

@IF(E14=A17,1,

@IF(D17<1.0, D17+1))

Narrative: If the month number from above equals the selected start month, label it as 1, otherwise evaluate the @IF

statement. This looks at the preceding month for an indication that the city has already started, and the value is greater than 1. If "no" it inserts zero, but if "yes" it just adds one to the preceding figure.

So this part of the model is doing the job of identifying the start month for each city, and labelling the succeeding months

A different rate of sales is to be expected while the new salesperson is "ramping up" the territory.

once it has done so. In the report part of the model, the formulae examine the corresponding locations in the top, and act upon them. It is here that we handle the different rate of sales to be expected while the new salesperson is "ramping up" the territory. In Figure 2 there is a LOOKUP table, and we have entered it so that we

could, if we wished, assign not only the percent of going rate for start-up months, but also any other variations in rate of sale—perhaps a seasonal variation, for instance.

The first two columns are simply "bring downs" of the values from above, so that they get printed out in the report. The formula in D33 is:

@IF(D17<=5,B33\*

@LOOKUP(D17.R14...R26).B33)

**Narrative:** If the value assigned to this month in the top matrix is less than or equal to 5 (indicating that it is indeed one of the first four months), multiply the going rate of sales found in B33 by the result of looking up the start month in the table. The fifth month, the first “going” month, will find a multiplier of one, and therefore will in effect bring over the going rate. If D17 is greater than five, then the going rate is similarly brought over

And that's it. You can change the start months in the first matrix and watch the effect on the total regions that result from one city's slipping or accelerating its activities. We have divided the two functions into two separate parts for illustration pur-

**Figure 1:** A start-up planner for a business that is opening up some new eastern markets.

## START-UP PLANNER

poses. It would be possible, of course, to enter a more complex formula and have both the identification of the start month and the calculation of revenue done at the same time.

Using this methodology, you can manage the start-up of new machines, new branches, the addition of new people to a department, the effect on expenses of buying new vehicles—anything that you want to examine in the light of slippage or acceleration of the start date. Naturally, it can also be adapted to a daily schedule as well as a monthly one, as we have done.

Now let's look at some extra utilities—we will demonstrate them on the above model and leave it to you to figure out how you can adapt them to your purposes—all of them are useful and functional.

### VisiCalc as a Display Tool

In one company for whom we have done consulting, the market research department regularly gets together to review results of studies, in order to get group input to the eventual recommendation they are going to make. Their analysts all have IBM PCs, and they do much of their statistical work using the VisiCalc program. When they get together, the conference room has one PC for the presenter, and multiple screens so that the others can see the output (for management presentations, they have a projection TV setup).

Some of the following suggestions are most suitable for this purpose, as they enable one to manage the presentation of material quickly and effectively. Our first suggestion allows you to examine the combinations of several different variables in a model without having to change them separately, a couple of keystrokes does it.

### Multiple Variables

Let's say that we know four specific ways in which the hiring may get implemented among the eight cities in our model, four different patterns of hiring. Look at Figure 3. As you can see it occupies the

11	1
12	1

Figure 2: A @LOOKUP table for the going rate for starting months.

very top of the model (did you wonder why we started the previous examples at row 12)? You can see our cities, and five columns representing options. At the bottom is a line called SELECT—, and you can see an asterisk sitting beneath OPTION 1. You will remember that if a location is formatted to /F\*, each unit of an integer value is represented by an asterisk; therefore, this asterisk indicates that there is a '1' sitting there. The formula in the column called TRANSFER is:

```
@IF(D10=1,D2,
@IF(E10=1,E2,
@IF(F10=1,F2,
@IF(G10=1,G2,
@IF(H10=1,H2,0))))
```

This is a super example of a nested @IF statement—seems to go on forever! The narrative is really very simple, since all it is doing is stepping through the SELECT locations looking for a 1, and when it finds one carrying over the value in the column above it. Just read it again and you will see

how it does it. Narrative: If D10 is one, bring over D2, if not look at E10. If E10 is one, bring over E2, and so on.

So you load up the option columns with your pre-selected combination of opening dates, and by just blanking or making zero any asterisks that are already there and substituting another, you can move the selected column over to TRANSFER. The first column in the Start Month Evaluator section now brings down the corresponding entry from TRANSFER. Once again, all of this could have been accomplished in A17, but the formula would have been complicated—if you have the space, do it our way.

If your model is set to /GOC (re-calculate by column), you will need an extra !Recalc to initiate the change. The VisiCalc program will not have done the TRANSFER column when it does column A, so it will need to "take a second look" with a recalc to transfer the value down. Of course, if the /GO makes no difference in your particular application, by all means set it to ROWS and avoid this (you will see later why we had to have ours set at columns).

You will find lots of applications for this idea. When there are a group of variables in a model, and they do not fall neatly in one location, it can be most annoying to prepare reports and find (at the presentation naturally!) that one or other of the variables did not get changed. Also, when developing material and you want to swap back and forth examining different variable environments, this method makes it easy.

Finally, in a presentation you can also

	A	B	C	D	E	F	G	H	I	J
1				OPTION 1	OPTION 2	OPTION 3	OPTION 4	ZERO	TRANSFER	
2			NEW YORK	1	0	0	2	5	0	1

10			SELECT—	*						

Figure 3: The variable options for the eight cities in the model.

## START-UP PLANNER

dynamically review the implications of change for the audience—and that is the reason for the column of zeros up there in the options columns. It turns the whole model to zeros!

In a presentation it is always annoying when you have distributed handouts to the audience to find that some of them have

got ahead of you in the material; and when using overhead projectors you need some dexterity in smoothly moving the masking sheet of paper down a chart so that you can review it one line at a time. We have a way of doing this with the *VisiCalc* program that is very smooth and orderly. Look at The Switch-on Display in Figure 4. What

we have done is to completely duplicate the format outline of our model beneath the original. This is the area we will be using to present our material. Note the column at left called SELECT, and the asterisks. Each location in this column is a "switch." If there is a one there, the row is switched on for review, while the

## Tektronix 40XX Terminal Emulation

**EMU-TEK™ IS NOW AVAILABLE FOR  
IBM PC, XT, AND MOST COMPATIBLES**

- Access powerful mainframe graphics using:
  - PLOT 10 (trademark of TEKTRONIX, Inc.)
  - DISPLA (registered trademark of ISSCO)
  - SAS/GRAPH (trademark of SAS INSTITUTE, Inc.)
  - DARC (available from QUESTEL, Inc.)
  - and most similar packages and services.
- Upgrade from dim storage tubes to bright raster scan technology, with complete software compatibility.
- Increase versatility with options such as:
  - High resolution board support (HERCULES, CSI, AMDEK, TECMAR, etc.)
  - Local pen-plotter support (HP, AMDEK, etc.)
  - Hard copy on EPSON or IBM matrix printer
  - LIGHT PEN for graphic input
  - Advanced communications program features
  - Other terminal emulations, including:
    - VT100 (trademark Digital Equipment Corp.)
    - ADM3 (trademark Lear Seigler, Inc.)
    - RETRO-GRAPHICS (trademark Digital Engineering, Inc.)
- **30 DAY NO-RISK TRIAL PRIVILEGE.**

Call or write us, or see your participating dealer.

CIRCLE 250 ON READER SERVICE CARD

## Divine inspiration for people who use the IBM PC and XT.

**Introducing SAVVY PC: Now you can create custom databases in less time, with less effort and for less money.**

SAVVY PC is unique. It integrates a database management system with a truly "natural" command language and a self-documentation capability. There has never been a faster or easier database building tool than SAVVY PC.

SAVVY PC speaks English. You won't have to master the rigid syntax and complex symbols of typical computer programming languages to develop a wide range of business and personal applications.

Because SAVVY PC is a fully integrated database, your applications can directly access all master files, speeding and simplifying operations. And because SAVVY<sup>®</sup> can recognize your personal word patterns, you can misspell, mistype, abbreviate or rephrase and still command your computer.

The speed, flexibility and economy of computing with SAVVY PC is truly inspired.

For more information and the name of the SAVVY dealer in your area, or to arrange for a SAVVY PC demonstration call 1-800-551-5199. (In New Mexico call 505-242-3333.)

SAVVY PC is a product of Excalibur Technologies Corporation, 800 Rio Grande Boulevard N.W., Mercado 21, Albuquerque, New Mexico 87104.

# BabyBlue II

## Multifunction/Multiprocessing

### The INTELLIGENT Choice

#### Packed with ALL the popular features:

- Up to a 256 Kilobyte Memory Expansion, optional in 64K blocks.
- Clock/Calendar with long-life battery backup (choose replaceable or optional rechargeable battery).
- Parallel Port for use with IBM/Epson and most other parallel printers (addressable as LPT1: or LPT2:).
- Two (2) Serial Ports addressable as COM1: and COM2:, OR use our unique extended port addressing to configure for serial devices other than COM1: and COM2: (i.e. pointing devices, graphics tablets, etc.).
- Baby Blue II is fully compatible with the IBM PC, the PC/XT and other compatibles, including the Texas Instruments Professional Computer.

#### Not just another DUMB multifunction board.

With all that hardware to manage, we think a board should have a brain. You won't find this feature on other boards—they may look pretty, but they can be pretty boring once you get them home. Baby Blue II is actually a second computer inside your PC, built around the high-speed Z-80B microprocessor.

#### • Background Processing:

Compile, assemble, sort, calculate, communicate or print—all in the background, while you and your PC continue to work on other tasks in the foreground. Because it is a separate computer, Baby Blue II performs these functions without slowing down your PC, helping you to do more work in less time.

#### • Autostart at Preset Time:

Baby Blue II can begin any task, even a background operation, at a specific time by consulting the onboard real-time clock.

#### • CP/M Capability:

Baby Blue II offers instant access to the vast CP/M-80 library of mature, professional software for every conceivable application.

#### • Dual Ported Memory and I/O:

You can use Baby Blue II's memory, ports and clock as ordinary enhancements to your PC. Or, you can let our Z-80 microprocessor control the board directly, for truly independent background operation.

#### All this and SOFTWARE too...

##### System utilities

**PDQ RAMdisk Software:** create a FAST pseudo-disk drive of any size in available system RAM. The DOS 2.0 version lets you change the size of your RAMdisk from the keyboard.

**Print Buffer/Spooler:** a TRUE print spooler: the Z-80 buffers and manages printing independent of your PC. Unlike other so-called "spoolers", this one won't stop your printer or slow you down when you start another job.

**Clock Software:** sets Baby Blue II's clock and initializes the system clock at boot time—never type the time and date again!

##### Communications

**Smart Terminal Emulator Package (STEP):** talk to other microcomputers or connect to larger host computers, as an asynchronous terminal through Baby Blue II's serial ports. Unlike other "smart terminal" programs, STEP offers full emulation of popular video display terminals (the standard package includes Televideo 950 and Hazeltine 1500. IBM 3101, DEC VT100 and many others are optionally available). You can send or receive text files, and with STEP's unique Sessions Menu, changing your configuration is a keystroke away.

**BSTAM File Transfer Utility:** Transmit and Receive text, HEX, and binary files (including .COM files) without errors and without fuss. BSTAM is easy to use, with all configuration parameters handled transparently under STEP.

Baby Blue II (64K installed) . . . . . \$ 695.

#### CP/M-80 compatibility

**Baby Blue Conversion Software:**  
Microlog's famous CP/M Emulator turns CP/M-80 programs into PC-DOS programs for fast, efficient execution on Baby Blue II. Completely transparent operation using standard PC-DOS commands—freely mix PC-DOS with CP/M programs and text/data files on the same PC-DOS disks.

**Convert:** supports bidirectional file transfer between PC-DOS and popular CP/M disk formats.

**Keyfix:** automates your keyboard with 54 programmable function keys for CP/M programs, eliminating tedious typing chores (max. 80 characters per key).

#### QUALITY you can count on . . .

Microlog is in the business of producing high quality, intelligent computer peripherals. Extensive factory testing gives our products one of the highest reliability rates in the industry. The finest components, connectors, and multi-layer PC board design, ensure years of trouble-free operation. We back all our products with a 90 day warranty and full technical support.

## START-UP PLANNER

remainder of the model is concealed with lopsided chevrons. We are, of course, using the feature of the *VisiCalc* program that inserts this row of "greater than" symbols to indicate that the location has

It is useful when you have long columns of figures to be able to identify the largest.

overflowed with a value too large to be displayed.

The simple formula in every location is

`@IF(Switch=1,value,1000000000)`

Narrative: @IF(asterisk is there, insert value from the original matrix, otherwise insert one billion!).

Now, with absolute cool, one can switch on the first line, review it for the audience, add the next line, and so on. There is one problem with this method—any vertical @SUMS are not going to "switch on" until all the components have come on. The presence of even one billion in the column above them won't let them. This can be solved, however, with an @IF statement. Can you figure it out?

### Identifying the Biggest

It is very useful when you have long columns of figures to be able to identify the largest, or the top four, or even add a ranking according to size. This is especially useful in an application like our illustration model when the "winner" can change with every change in the start month sequence. In a presentation, to have the top numbers highlighted makes it easier to explain them or see the effect a change has had.

In Figure 5 you can see a section of the model that would be placed to the right of the area that produces the figures to be

ranked. The process is one of eliminating in successive columns the top value in the preceding column, until you are left with none. For this we use the @MAX function in the *VisiCalc* program.

The formula in the first location in the FIND 1 column is

`@IF(P33=@MAX(P33 . . . P40), 0, P33)`

Narrative: If the value in the preceding column is the largest (@MAXimum) then insert zero, otherwise just move the value forward. As you can see in FIND 1, the largest value in the preceding column (the original TOTAL CONTR.) has disappeared and has been replaced with zero. Each FIND column performs the same function on the preceding column (don't try and /Replicate the first column if, like us, it is some distance away from the

Just to demonstrate a practical use for the function you can see in Figure 6, we have added a couple of columns to our original model, called RANK and PRIZE FUND. We carried over the rank from the Ranking Processor, and displayed the top four by using one asterisk for the top, two for the second, and so on. This was done with the following formula, which needs no narrative:

`@IF(Rank<=5,0,Rank)`

The prize fund is an amount intended to pay the four winning territories. (I know it's not fair on late starters, but I just wanted to illustrate a use to which a ranking could be put, and also use @CHOOSE, which we have neglected a bit. You can figure out a sensible way to use it when you add it to a model in your own PC!)

	P	Q	R	S	T	U	V	W	X	Y
	FIND 1	FIND 2	FIND 3	FIND 4	FIND 5	FIND 6	FIND 7	RANK		
Narrative	0	0	0	0	0	0	0	0	1	
Prize Fund	494000	494000	408000	0	0	0	0	0	4	
Expenses	639000	0	0	0	0	0	0	0	2	
Net-calc	394000	394000	394000	394000	0	0	0	0	5	
	448000	448000	0	0	0	0	0	0	3	
	282950	282950	282950	282950	282950	282950	0	7		
	167200	167200	167200	167200	167200	167200	167200	0	8	
	212000	212000	212000	212000	212000	0	0	6		

Figure 5: This section of the model produces the figures to be ranked.

Ranking Area because your "Relatives" won't work in the succeeding columns. You can of course /Replicate the second column, FIND 2, when you have structured it).

The formula in the RANK column is  
`(@SUM(S33 . . . Y33)/P33)+1`

Narrative: Add the row across, divide by the original value (which will tell us how many columns it appeared in) and then add one. This last addition is necessary because we found the largest right away, in FIND 1, and therefore there is a row of zeros for it.

What we have done is decide that the winning salesperson will get a bonus of 2% of territory sales, the second 1.5%, third 1.0% and fourth half a percent. The formula is:

`@IF(Rank>.99,P58*@CHOOSE(Rank,.02,.015,.01,.005),0)`

Narrative: If the Rank is greater than .99 (which will eliminate all those unranked), multiply the territory sales by the value @CHOOSE using the rank as an index. In the case of 1, we will multiply by .02, 2 by .015 and so on.

These last utilities were all developed

## START-UP PLANNER

by VisiCalc program users in the course of their daily work. They were "discovered" by the user having a need for an end result, and making the program do it. We sometimes feel that there is nothing the VisiCalc program cannot do, as we tackle new and different requirements. An exaggeration of course, but there is much that the program can do that at first glance seems impossible. The secret lies in being completely comfortable (dare we say expert?) in all the VisiCalc functions, to the point that you can review each of them in your mind when seeking an end result. ■

## Match Point/86™ Lets You Run CP/M-86™ Programs On Data Files On Your IBM-PC Without CP/M-86 Software

MatchPoint/86 was created especially to enable IBM-PC users to take advantage of the many business application software programs that are available in the popular CP/M-86 format.

**INTERACTIVE FILE COMINGLING.** One of the main features of MatchPoint/86 is "FileComingling™". It allows you to call for information stored in CP/M-86 format and use it while operating in PC/DOS.

# Fancy Printing With Fancy Font

SoftCraft has produced a software package that will allow you to transform your inexpensive Epson printer into an advanced dot matrix machine.

**T**he new advanced dot matrix printers provide near letter-quality print, which (if you don't look too hard) is practically indistinguishable from that of the daisy wheel typefaces. These machines also produce draft-quality dot matrix type, which though less readable, is generated at a much higher speed. However, dual-purpose high-density matrix printers cost up to \$2,000 or more, and

many users may not want to make the investment. Those of you who own inexpensive printers now have an alternative—a program from SoftCraft called *Fancy Font*. Written in C language, this software system is a "personal typesetter" that transforms an Epson printer into an advanced dot matrix machine with remarkable flexibility and sophistication. It takes advantage of the ability of the Epson printer to space vertically at  $\frac{1}{32}$ -of-an-inch intervals and passes the printhead across each line about six times to achieve the "letter-quality" look. The price you pay is speed. It takes about 8 minutes to produce a 40-line page using *Fancy Font* with an Epson MX. But the result is letter-quality print that is as good as or better than that of the \$1,000 advanced dot-matrix machines.

*Fancy Font* also has the ability to print in many different fonts and to generate special characters. (A font is a set of alphanumeric characters of a particular typeface and size.) You can add foreign characters to each of the already-prepared type sets, called font files, that are included in the software or create your own fonts from scratch. *Fancy Font* also has powerful formatting abilities.

The program comes on four single-side diskettes, which provide 19 different files of 95-character ASCII fonts, which you can use as they are or modify in any way you choose. Nine additional partial fonts (upper and lower case alphabets), a huge (97,922-byte) database of miscellaneous characters, and three programs, Pfont, Efont, and Cfont, which print, edit, and create fonts, respectively, are included.

## **Fancy Font**

SoftCraft

8726 Sepulveda, #1641

Los Angeles, CA 90045

(213) 821-8476

List Price: \$180

**Requires:** 128K RAM, two disk drives, Epson or IBM dot matrix printer.

CIRCLE 799 ON READER SERVICE CARD

## FANCY FONT

### Mix and Match Fonts

To use *Fancy Font* for printing, you write text with any word processor and embed single characters with a backslash (\), which will control formatting. You can select up to ten different fonts per print run. The embedded format instructions include those for underlining, line centering, flushing a line to right, setting line justification on and off, moving to top of next page, moving down a given distance from current position, moving to a given vertical position from top of page, moving to next tab, spacing to the right horizontally by 1/30 of an inch, spacing right a certain distance from the current position, inserting in the text up to ten different strings or current page number or current filename, and few other indicators. Using the word processor, you format the text to the number of characters you want in a printed line. Then save the text to a file and print it with Pfont. This program's interactive mode will prompt you with questions, or you can give the program a command line in DOS, such as

```
[A> Pfont B:TEXT.TXT +FO
ROMNB18 ROMN12 OLDE11 +NF
+TB.5 +LM.75 +LW 7.5 +SP .2
+HL ""F2Zander\o's#\r\wFancy
Font\w" +RD 1]
```

This example tells the printing program to print B file TEXT.TXT using 18-point Roman bold where indicators for font number 0 are embedded in the text, 12-point Roman as font 1, 11-point Olde English as font 2. It also tells it not to put a header line on the first page, to tab .5 inch, to create a left margin of .75 inches and a line width of 7.5 inches, to space .2 inches between each line, to use a header line printed in font 2 with my name on the left, to center the page number and to flush right the underlined words *Fancy Font*, and finally, to print the program in the second fastest rough draft mode. Command lines can get very long and typing them accurately is tedious if you wish to specify a large number of the 26 possible formatting parameters as something other than their default values. The command

Figure 1: Examples of typefaces and graphics available from the Fancy Font Hershey character database.

lines themselves can be saved as files to be invoked again, and you can add or delete parameters as you perfect your print job in the draft mode. The command line then would be given simply as a reference to the command file:

```
A> Pfont <B:TEXT.FFI.
```

Additional command parameters include those for footing line strings, (strings of words that can be substituted in text by inserting the letter s after the backslash indicator) and controlling top and bottom margins, heading and footing margins between top of page and string, total page length, pause between pages for insertion of paper. They also control the use of Epson fonts (you can embed indicators for any of the nine), and formfeeds, and allow you to indicate initial page number and first page to begin printing, as well as to concatenate files without page break.

### Efont

You can put almost any foreign characters and mathematical symbols into the prepared fonts by using the Efont editing program. You transfer specifications for particular characters to separate word processing files and modify them with your word processor. The character is displayed on screen with asterisks representing the dots of the matrix, and you just add, move, or delete asterisks to form a new character. A print feature lets you test what you have made. Values that reflect a

character's size are given in the upper left-hand corner of the screen, and, when you change a character's size using Efont, you must change the value to reflect the new size. For instance, if you add an umlaut (..), the size of that character will change. This detail is easy to overlook and can cause strange character placements. Every font has a fixed length, so to strobe your newly created character, you must insert it in place of another character that you are not using. Characters such as the at sign (@), the ampersand (&), and the carat (^) are good choices. Efont provides a command that allows you to do this. Presto! You have created your own special language or math font.

### Inviting Special Fonts

The Cfont program lets you create an entirely new font using *Fancy Font*'s version of the 1,594-character Hershey (National Bureau of Standards) database (see Figure 1), which includes, among other things, the Greek and Cyrillic alphabets, graphic and musical notation symbols. You match up the index numbers of the Hershey characters with those of the ASCII code your keyboard recognizes, and Cfont will generate a complete font file for you. In order that your new font will match other fonts in size, a special command allows you to change the dimensions of the characters. I managed to work up a complete Greek font this way, but my new font forced wider spacing

# 1000 FLOPPY DISKS

## VS. THE BANK.™

**Savings you can take to the bank: 200 MB only \$2,195.** CORVUS is proud to introduce the BANK.

It's the most dramatic breakthrough in low cost, high capacity mass memory systems since CORVUS introduced the Winchester disk for microcomputers in 1979.

The BANK's removable tape cartridges hold up to 200 megabytes of information. That's equal to 1000 double density floppies or 10 times the capacity of the largest hard

disks commonly available for microcomputers. You can use the BANK to complement a Winchester disk. It has 19 times the capacity.

And the BANK's cartridges are removable for unlimited capacity and storage.

**On-line archival back-up you can bank on.** You can use the BANK as a random access archival device.

If your Winchester disk fails, you can restore selected volumes without having to restore the entire

contents of the hard disk.

The BANK is the perfect solution to your back-up storage problems as a shared storage device on OMNINET™—the leading Local Area Network for microcomputers.

Call CORVUS for the name of the dealer nearest you. We're sure you'll smile...all the way to the bank.

For more information contact:

# TECMAR'S SUPER PRICES!

## CAPTAIN™

### TECMAR'S TOP OF THE LINE MULTI-FUNCTION BOARD

Provides maximum memory expansion to 640K for the PC.

Performs eight (8) key functions in one (1) expansion slot.

- **0 to 384K MEMORY** - fully socketed for easy user upgrade in 64K blocks.
- **CLOCK/CALENDAR** - battery-powered to maintain date and time while computer is on or off.
- **SERIAL PORT** - to connect to modem or printer with full IBM PC compatibility.
- **PARALLEL PORT** - fully compatible for standard IBM Parallel Printer or compatible printers. Cable and connector included.
- **RAMSPooler SOFTWARE (Included)** - enables printing to become a background task, freeing your PC for other functions.

- **SPEED DISK SOFTWARE (Included)** - simulates high speed disk drive in RAM, from 5K to 512K in 1K increments. 50% faster than a Winchester.
- **AUTOTIME SOFTWARE (Included)** - automatically enters correct date and time each time the user powers up the computer.
- **OPTION** - inexpensive PAL chip enables user to restrict availability of information on a 'need to know' basis or to limit access to proprietary software.

**\$349 Unpopulated Memory**

**\$424/64K**  
**\$499/128K**

# TECMAR'S GRAPHICS MASTER.™

It adds graphics to your IBM Monochrome Display, or 16 high-resolution colors to your color monitor!

NEW  
IMPROVED I

**Text or high-resolution graphics on the IBM Monochrome Display**

**Amazing new resolutions on standard color monitors**

**Complete emulation of IBM's display adapters**

**On standard low-scan color monitors:**

- 640 horizontal x 400 vertical in 16 colors
- 720 horizontal x 480 vertical graphics in 4 colors.

**On the IBM Monochrome Display:**

- 720 horizontal x 700 vertical
  - 25/50 lines at 80 characters
- Graphics Master can do much more. In all, over 30 different display modes can be used on standard monitors, and over 25 on the IBM Monochrome Display.

With certain monitors, you can achieve super-high resolutions like 512 horizontal x 420 vertical in up to 16 colors *without* interface.

Graphics Master is equipped with a full 128K of on-board display buffer memory. In low-resolution modes, extra memory isn't wasted. You can divide it up into alternate display screens or use it for general data storage.

Graphics Master retains complete compatibility with the IBM Monochrome and Color/ Graphics Adapters. Use it to accompany or replace one or both at the IBM cards.

Graphics Master will run with all IBM software for the Personal Computer, including BASIC's graphics commands.

With Tecmar's Video Cassette Recorder Controller, you can overlay Graphics Master images on videotaped material with an external mixer.

Call or write for further information. Our new address is:

## FANCY FONT

between lines than I wanted there to be.

I called SoftCraft for help and spoke to Bill Overman, who, with Robert Fenchel, wrote *Fancy Font*. Overman explained that changing the size of Hershey characters in Cfont does not automatically change the top and bottom blank point values on your screen. These have to be changed by a command function in the Efont edit program. The current manual doesn't explain this problem but future versions will.

Future releases of *Fancy Font* are currently underway and will be made available to present owners for a nominal update fee. The first, which will be out shortly, is a special IBM PC version that bypasses the high information-checking overhead, which slows down the program when running under DOS.20. This version is also compatible with the Gemini

## The manual is set entirely in Fancy Font typefaces.

printer. A second revision, which will be available later this year, will provide word wrap, backspacing, and overprinting capabilities, and will allow for variable settings of the left margin.

The manual is 100 typewriter sheet-sized pages in length and is set entirely in *Fancy Font* typefaces. It looks attractive and reads well, explaining the details of the program operation clearly. However, it would have been useful if the manual supplied detailed runthroughs of sample operations. *Fancy Font* is complicated and using it may be difficult if you don't read the instructions carefully or if you are a

sloppy typist. Fortunately it is set up so that most operational commands have default values. The program recovers from your blunders, so the trial-and-error method is a fun way of exploring *Fancy Font*'s capabilities. In addition, help screens are available at all points where users could become easily confused.

### A Professionally Typeset Job

What's special about *Fancy Font*? For a nominal investment you can turn your clunky Epson into an advanced dot matrix printer. The Roman fonts are clear, the print quality is even and aesthetically pleasing. The italic fonts are a bit fuzzy and hard to read, but you can modify them if you wish. The Roman bold, sans serif, slanted sans serif, and Old English faces reproduce nicely. The super- and sub-script font characters are well-propor-

## FANCY FONT

tioned and clear. The script fonts are attractive, too, but I haven't found a use for them myself. You maintain complete control over all the Epson fonts. The formatting capabilities are superb. I edit a newsletter for a local botanical society and use *Fancy Font* to produce camera-ready copy that looks like it's been professionally typeset.

There are some significant problems, though. Since *Fancy Font* uses a graphics mode, it must give the printer 1 byte for every 120th of an inch, which translates into about 90,000 bytes per page. It may be nice to know you have one of the hardest working software programs on the market, but this also means that you can't use a spooler (unless you can spare 88K for print buffer per page). And, a spooler certainly would be useful here. Four characters a second (eight with an Epson FX)

is about six times slower than letter-quality speed for advanced dot matrix printers. You get 8-, 10-, 11-, 12-, 18-, 20- and 40-point sizes in the Roman typeface. Since the fonts have proportional characters (for example, the letter *i* is much narrower than the letter *m*), the 12-point size doesn't quite fill a line on a sheet that is 8½ inches wide. The people who prepared the good-looking *Fancy Font* manual used a fancy word processor to put about 85 characters on each line, but most users will have word processors with only 80 columns. The problem isn't so serious that you can't live with it, and, fortunately, SoftCraft promises both fixed-width fonts and larger 14-point fonts in future versions of its product.

Since the characters in each font are usually different widths, it is impossible to accurately gauge the printed length of a

line of characters on your monitor. As a result, justification is a guessing game, and you must expect to run a couple of rough drafts to crop those lines that are too long. The word wrap feature, available in future versions, should take up some of the slack. In any case, the problem doesn't occur that often: maybe one line for every two pages.

The print quality of *Fancy Font* is as good as that of the best advanced dot matrix printers. And for \$180, instead of the \$2,000 you would pay for an advanced dot matrix printer, it offers a lot of fancy fonts. ■

*Richard H. Zander is curator of botany at the Buffalo Museum of Science. He uses the IBM PC for word processing, data management, and scientific research applications in his work.*

## PC LOGO™ IS HERE!

The Logo language for the IBM® PC is here. PC LOGO is a full implementation of Logo including word and list capability as well as turtle graphics. Since PC LOGO incorporates much of the syntax of Logos available on other computers, it is easy to learn. Yet PC LOGO goes far beyond other versions of Logo by taking advantage of the extra features of the IBM PC including function and arrow keys and provides a greatly enhanced editor.

A complete tutorial for beginning users and a full reference manual have been written for PC LOGO by a consortium of Boston-based Logo experts.

PC LOGO features include:

- Program and Utility Disks
- Complete Tutorial and Reference Manuals
- Full peripheral communication capability
- 64K expandable to 128K
- Function keys defined

\$199.95 complete

CIRCLE 226 ON READER SERVICE CARD

# FilePlan. Organize a spreadsheet organ

Here's the first electronic filing system that lets you see the big picture. On the IBM PC and most personal computers.

Like a spreadsheet, FilePlan™ puts data in rows and columns. You can scroll over your entire worksheet to see everything.

Type in any information you need to file and update—customer lists, expense records, addresses, projects due, personnel records, purchase orders.

It's easy because FilePlan works like you think. You don't have to set up a program. Just plunk in the data, *then* decide how you want to sort it, update it, retrieve it, combine it, display it on the screen and print it out. A menu of actions is always available. Help is a keystroke away.

If you'd rather see one entry at a time, just flip into "forms" mode. You can enter data either way.

The information is totally under your control. Say you've made a file of customer orders with amounts and dates. FilePlan will automatically re-sort the list with every entry.

Then, before your next trip to Cleveland, you can:  
List everyone in Cleveland who ordered within the last six months.

Exclude anyone whose order was under \$500.

Rank the customers by their total orders.

Print out mailing labels. Formats are easy to set up with MemoPlan™ or any word processor.

Have FilePlan generate a personalized letter to special customers so they know you're coming. It's far easier than using a typical "mail merge" program.

# Organizes your files like Organizes your numbers.

That's just a start. FilePlan eliminates most mistakes—or helps you correct them. If you forget to include a category or need more room for a field, you can make changes any time. For someone who's inexperienced at data entry, just specify

Report  
Out

prompts and limit the kind of data allowed—for instance, nothing except five numerals under "zip code."

FilePlan even transfers data through our Link Module to MicroPlan, Chang Labs' renowned financial planning spreadsheet.

You can pull sales figures from FilePlan, then do your projections with MicroPlan.

Just about anything you can imagine doing with information, FilePlan will do for you. Easier than you imagined.

See for yourself. There's a dealer nearby who'll give you a demonstration.

Chang Labs, 5300 Stevens Creek Boulevard,  
San Jose, CA 95129. (408) 246-8020.

**Only one  
program handles  
all your funds  
and investments  
and trusts  
and partnerships  
and business ledgers.**

## **One. Alone.**

Only MoneyTrack lets you—or your secretary—keep your books for all accounts, business and personal, with one program. All funds, investments, trusts, and all your business ledgers. Everything. Simultaneously.

### **Only -MONEY-TRACK- does it.**

No other financial program for personal computers can do it. You'd need two, three, maybe four; and you'd still have to tease and trick them into doing the things MoneyTrack is already programmed to do easily.

Even then you wouldn't enjoy MoneyTrack's greatest benefits. Because having everything in one program gives you unmatched flexibility.

For instance, only MoneyTrack lets you do a cross-analysis of both business and personal income and expense. You can track tax-sensitive accounts—like interest income/expense and capital gain/loss—across every one of your ventures.

This, and much more—only with MoneyTrack.

### **Is -MONEY-TRACK- for you?**

It's specifically designed for those with multiple sources of income, varied interests. The entrepreneur, investor, business manager, general partner, developer; those with a small business, farm, retail store, professional practice.

For you, MoneyTrack is not only the best program, it's the only one that makes sense.

What's more, you don't have to know anything about bookkeeping, and the very minimum about computers. MoneyTrack's "big system" programming takes care of you.

### **Find out—free.**

MoneyTrack is under \$350. And to know what it's worth, you must see how much it does for you.

Nothing easier. You can get a free, no-strings, interactive teaching demonstration of MoneyTrack at any ComputerLand—and many other computer stores. Just go and ask.

Or call us, and we'll arrange it for you.

Pacific Data Systems, Inc., 6090 Sepulveda Blvd., Culver City, CA 90230. (213) 559-8713.

# Financial Services You Can Bank On

You can transfer funds, check balances, and even dabble in the stock market with your PC and two new on-line systems from Irving Trust and E.F. Hutton.

**F**inancial planning can be convenient and profitable for users of the IBM PC, thanks to two new systems that apply the capabilities of the microprocessor to the daily business of money management. Huttonline, from E.F. Hutton, and micro/CASH-Register, from Irving Trust Company, are two computer-based money-handling services available to PC owners nationwide.

Medium-sized and larger businesses will be interested in the money handling and account reporting capabilities of the Irving Trust system. E.F. Hutton's service, Huttonline, allows clients to access the

firm's computers for up-to-the-minute personal account and investment information.

## An On-Line Cash Register

Irving Trust's micro/CASH-Register is a money management system with a growing range of capabilities. It's the intelligent terminal version of the bank's dumb terminal system, simply called CASH-Register, and it was developed specifically for use with the IBM PC.

Micro/CASH-Register is a boon to multinationals and to any business, institution, or financial organization with overseas offices or business ties. It's accessible

from anywhere in the world where there is a local time-sharing network with satellite or common carrier connections. Transmission is at 1200 baud. Users pay for micro/CASH-Register on a per-instruction basis. There are no license charges or monthly maintenance fees.

The system's current capabilities include funds transfer, account reporting, and transmission functions. If the morning's opening balance report shows a \$5-million payment logged in overnight, the money can be deposited immediately into an interest-bearing account, for example. And since all reporting is up-to-the-minute

# Unlock the Full Power of Lotus 1-2-3™

## **KEYII** **1-2-3**

The KEYII™ 1-2-3™ is a set of 1-2-3 macro programs that helps you process databases in 1-2-3 worksheets faster and easier than ever before. Its simple and logical menus put 1-2-3's powerful analytical tools at your command, while reducing your keystrokes by up to 90 percent.

You define the results you want with just a few keystrokes. The KEYII 1-2-3 takes care of the details.

### **Also New From Lighthouse Software**

## FINANCIAL SERVICES

at any time, virtually any place in the world, whoever is at the office and authorized to enter the system can make a transfer 24 hours a day.

The main menu is accessed by inserting the master program diskette in drive A and the transaction file in drive B and entering your passwords. If you have a color monitor, micro/CASH-Register offers a display with prompts, menu items, entries, and column/row headings in different colors. The monochrome display uses different shades and intensities. For example, prompts and error notices show up in pink in appropriate places on the color display; they're a lighter shade of green on the monochrome version.

The various micro/CASH-Register screens offer good, clear prompts, including directions for the PC's function keys. Four of the keys are permanently assigned, while the rest change from menu to menu. F8, for example, is always "yes," and F9 is always "no." This assignment holds for all languages (foreign languages, not computer languages) spoken by users around the world who will be typing into the system.

### The Main Attraction

The main menu is divided in half, with most of its intelligent functions on the left side and most of its "dumb terminal" functions on the right. The left side features a funds transfer package, which allows off-line preparation prior to transmission. You can also get balance reporting from start-of-day onward, including the previous day's account activity, as well as close-of-day reports on electronically processed debits and credits, including funds transfers, automated letters of credit, and foreign exchange and loan transactions.

Additional capabilities that will join the funds transfer package on the left, or intelligent mode, side of micro/CASH-Register's main menu are slated for early to mid-1984. Foreign exchange/deposits, collections, securities, documentary credits, and treasury management already have

VIEWTRON/HUTTON		EFH11

O YOUR ACCOUNT INDEX		

A screen from Viewtron, E.F. Hutton's electronic information service.

option selection numbers on the menu.

The right side of the menu is mainly for housekeeping, maintenance, and several dumb terminal functions. Administration, which includes setting security and passwords, is first on the list, followed by the dumb terminal system, CASH-Register. Dumb mode capabilities include balancing checks, accessing anything in CASH-Register, and accessing other banks' dumb systems. Data transmission, an intelligent function, is the third option on the right. The user can also store repetitive (regularly made) funds transfers through an option on the right side of the menu. Finally, there is start-of-day processing and return to system.

The most useful and convenient of the main menu options currently available is the funds transfer package. Selecting funds transfer from the main menu gives you seven new options. You can enter a nonrepetitive or repetitive transfer, verify a specific transfer, batch-verify several transfers, display a transfer, display a transfer report, or list items by status.

This last option lets you call up a list of

all items you processed during the day so far, showing item number, amount, status, and reference number. Displaying a transfer report will provide all the data on a specific transfer, including addresses of receiving and account parties, amount, status, reference numbers, payment details, and bank information.

If you want a report at the end of the day, micro/CASH-Register will get you ready for tomorrow by summarizing closing book balance, closing balance available, and available balance for the next business day for each account.

Once you've set up a transfer and have gone on line to send it, it's received, processed, and confirmed within seconds. Its completeness and off-line entry capabilities make the funds transfer package what Irving Trust senior vice president Samuel Newman says it is, "the first of its kind."

### Need Help?

If you run into trouble in setting up or sending a transfer, you can talk 'til you

(continued)

## FINANCIAL SERVICES

heart's content to the console operator at Irving Trust's headquarters in New York, and at no extra charge. In many cases you can type your problems directly into the system and get back an immediate answer with the solution. If the operator happens to be away from the console (it's staffed 24 hours, but more lightly at night when at least some of New York City sleeps) or if you're using a language other than English, you may have to leave a message and wait for an answer. More staff will be added as the service expands.

A useful feature of micro/CASH-Register is that it lets you enter and verify both repetitive and nonrepetitive transfers before transmission, and it provides immediate status reports on all items entered, verified, and sent. This off-line entry cuts transmission costs; whether the small amounts thus saved are of any great

importance to a company making million-dollar transfers is debatable. Items not yet verified appear on the screen with a note to the effect that they're still awaiting action.

Clearly, with all this money changing hands, or, more accurately, changing machines, good security is essential. The Irving Trust system provides several levels of increasing security, with the customer deciding which company employees can perform which operations. The system then assigns identification numbers and passwords accordingly. If a company chooses, it can assign as many as three passwords to each of its employees. Customers can change ID numbers and passwords as often as they wish. If they don't change their numbers on their own within a given period of time, the system will refuse to admit them, in effect forcing

them to change. Text authentication of customers' messages during transmission provides an additional level of security.

Information about micro/CASH-Register is available by contacting Kenneth J. Soldwedel, vice president of the Irving Trust Cash Management Department, at (212) 487-6300.

### Brokerage for Breakfast

If you like your cash balance with your breakfast bacon, E.F. Hutton can serve it up. The country's second largest broker has beaten the competition to the ticker with the first commercially available home brokerage package that's offered by a brokerage house.

# Turn Your PC Into An **IBM XT**

## The SIGMA Designs Hard Disk Kit Makes It As Simple As...

Why pay \$3000 more for the XT? For much less, the Sigma Hard Disk kit gives you a better, faster drive, and comes complete with mounting hardware, user's manual, and BIOS for DOS 2.0. Available in 10 MB and 15 MB.

### MOUNT THE HARD DISK

With a fast access time of 68 msec, our drives are designed for trouble free operation. Plated media, dedicated shipping zone for heads, and built-in shock mounts, let you move, even drop the disk without data loss. The sound mechanical design and built-in air circulation system keep the drive cool.

### INSTALL THE CONTROLLER CARD

Designed to support up to two Winchester Drives, the controller will handle 10 MB, 15 MB and larger. Provided with bootable BIOS on EPROM for PC 2 and with nonbootable BIOS on diskette for PC 1.

### SECURE AUXILIARY POWER SUPPLY

The power supply connects to the auxiliary outlet of your PC. Plug your monitor into the external power supply's own outlet. Power is still controlled by the PC's on/off switch.

# IN BY NINE OUT BY FIVE

It's an executive's dream. From a lifeless heap of charts, tables, diagrams and data comes a full color, comprehensive, three-dimensional slide presentation in *one working day*.

The most impactful, pertinent, and concise analysis of your complex data — on-screen computer-generated color graphics — is translated for presentation to 35mm color slide film and ready for processing the same day.

The VX Series from Vectrix, seen here tailored specifically for the IBM PC<sup>®</sup>, can create high resolution, superior quality presentation graphics for thousands and thousands of dollars less than ever before possible. No other color graphics machine near this price offers 512 colors per pixel from a palette of over 16 million. The VX Series from Vectrix has a versatile paint program, allowing color images to be

programmed on-screen much as an artist paints on canvas. And, for the first time, automatic reproduction of 35mm slides is possible with breathtaking accuracy.

The VX Series, functioning as a co-processor to virtually any host computer, delivers the first truly affordable in-house color graphics presentation capabilities to the business world. With on-board software, hardware line and arc generation, built-in command set and character generation from a user-friendly format — Vectrix can color every business presentation a success for less money than you ever imagined. For specifications and technical data on the VX Series, and additional features and options, call toll free, 1-800-334-8181. Vectrix Corporation, 1416 Boston Road, Greensboro, North Carolina 27407

## FINANCIAL SERVICES

mation, and investment briefs. They can send messages to their account executives as well. From nearly anywhere in the United States, a local call will get you your portfolio positions, cash and margin balances, and open orders, as well as the status of Asset Management Account and Asset Reserve Account check-writing, and other transactions. It's up to date at all times, saving clients the wait for an end-of-month statement.

Huttonline's chief competition is TradePlus, an independent service now seeking affiliation with brokers (see "TradePlus: Your PC's Seat On The Stock Exchange," PC, Volume 2 Number 1). TradePlus does allow you to place immediate orders, but the cost for this service is much higher than the cost of Huttonline, especially if you want up-to-the-minute quotes.

CIRCLE 546 ON READER SERVICE CARD

## FINANCIAL SERVICES

most of its customers want is an up-to-date information retrieval system that provides the latest data on their accounts. Customers still prefer to talk to their brokers

before placing orders, in any case, Huttonline is not intended to replace personal contact with a broker.

All stock activity in all your accounts

can currently be accessed through Huttonline. Commodities are not yet on the system, but they will be added. The service provides your portfolio value and the status of your investments as of the close of the last trading day, plus transactions over the last 30 days, cash and margin balances, open orders, and dividends and other incomes. The service is especially useful if you're writing checks on an Asset Management or Asset Reserve account. Both can fluctuate widely with market changes, so it is important to know your balance.

The other major Huttonline services are briefs and summaries of Hutton research and investment reports. If you want more information on a topic than the screen provides, you can order the full brochure via a message to Hutton and it will be delivered within a few days.

### You Talk, Hutton Listens

Aside from some minor differences in the way the menus are set up, the only major difference between Huttonline on CompuServe and Huttonline on Viewtron is in communications. On both services, you send your messages to Hutton directly on Huttonline. However, since Viewtron has its own communications capability, Hutton will write to you at your Viewtron mailbox.

You can send messages to your broker and to Huttonline operators. Hutton does not encourage transactional messages and expects that most electronic chitchat between customer and account executive will be along the traditional information-seeking and advice lines. However, some limited buy/sell orders can be given. You can direct your account executive to "sell at market," for example, but you can't direct him to "sell at 50," because he may or he may not be there at the time the stock hits 50.

"It's not for time-sensitive orders," said Lee R. Greenhouse, assistant vice president for videotex and personal computing services. "The research we've done says that people want information.

## The MICROWRITER™ Daisy Wheel Printer.

Price \$680

#### Features:

- Microwriter parallel interface mounted internally in the Olivetti Praxis machine
- Built in self test
- Portable...comes with deluxe carry case
- Low noise level
- Slim modern styling
- Print quality is identical to the finest office typewriters on the market
- Can tab
- Rule single lines both vertically and horizontally
- Underline
- Print at 10, 12, or 15 characters per inch (switch selectable)
- Ten character memory automatic error correction, with lift-off carbon film correction ribbon (for typewriter use)
- Automatic or programmable page formats
- Handles letter, legal size sheet and fanfold paper in widths up to 12 inches wide
- 165 character/12 inch print width
- Wide selection of 21 interchangeable daisy print wheels available
- Ribbon cassettes just drop in
- Switch selectable European keyboard
- Centronics compatible parallel cables are currently available from stock

With the Microwriter you will never again have to send an important letter or a simple correspondence that doesn't look impressive. Why settle for just any printer when you can have a MICROWRITER...a fine letter quality typewriter for you and your computer. For more information, see your local computer dealer or contact Ammicro directly.

## FINANCIAL SERVICES

They want to talk to their brokers before deciding and ask them what they think." At some point most of the major brokerage houses are going to be providing electronic access, and decisions will have to be made about whether these services will allow direct placement of orders. For now, though, Huttonline's main advantages are the immediacy of its information and the ability to use it at your convenience. "We're getting away from the constraints of market hours and the broker's office hours," said Greenhouse.

Huttonline has a second communications channel that goes right to the people operating the service. It lets you tell Hutton how you feel about the various features of the service and what other capabilities you'd like to see it have. You can also make suggestions for improvement.

Hutton also sends you, through menu options, information on the service itself, with user tips, news on what's been added to the system, and summaries of commands and service descriptions. This service can be accessed through the ComputerServe version's "Information Menu" or the "User News" option on the Viewtron main menu.

### The Password Is . . .

You access Huttonline with a two-part password. One part is an identification number assigned by Hutton, and you choose the second code; it can be alpha, numeric, or both, and you can change it as often as you wish. If you have more than one account with Hutton, you can assign different passwords to each. You must call Hutton to change the password. The system will cut off erroneous password entries after a certain number of logon failures. As a further security precaution, Hutton monitors the system constantly and looks for unusual usage patterns.

Like the home banking systems now in various stages of development, Huttonline can be expanded in several directions. Users can already write checks, and a formal bill-paying system could easily be set up. Other services could put Hutton in

competition with banks, which might well take their own services in the direction of brokerage.

A few years down the line, we may

well be doing all our financial tasks, from budgeting to banking to investment, on one comprehensive, electronic, financial services system. ■

# Infoscope ... Its magic happens right before your eyes

Thirty minutes with your new computer and Infoscope, and you can be showing off — entering information, sorting it, displaying it, putting it to work in ways you never dreamed possible.

Infoscope, a revolutionary new program for dynamic information management, opens up the potential of the personal computer. It's usable and useful now even for a beginner, but it'll never get in the way in the long run.

From the first minute you use it, you'll discover some very interesting applications. It comes

with demonstration "scripts" and sample data so you can sit back and watch it do its stuff without doing a lot of tedious data entry.

Infoscope helps you create "Scopes" to display data — windows on the screen that grow, shrink, move around, and overlap, while showing you just the information you want to see.

As you work with it, Infoscope adapts to your level of expertise. Its "choice-driven" approach makes it easy for a new user to get up to speed, but it doesn't

entangle an expert in a maze of menus he doesn't want to see.

In short, Infoscope is as simple or as complex as you want it to be, and it does virtually any information management chore you want it to do.

But you have to see it for yourself. Infoscope is available for most popular 16 bit microcomputer systems. Ask for a demonstration at your local computer store, or write us for details.

PROGRAM™

**"ADD UP TO 512K RAM, ASYNC AND  
SYNC COMMUNICATIONS, A CLOCK  
AND PRINTER SUPPORT-UP TO FOUR  
I/O PORTS IN JUST ONE SLOT?"**

# "YOU CAN WITH PERSYST."

## **The Persyst Time Spectrum. It's the most powerful and expandable multi-function PC board you can buy.**

A Persyst Time Spectrum™ multi-function board can make any personal computer work better.

Whether you own an IBM PC or XT. Or the IBM compatible Compaq or Columbia.

There's even a Time Spectrum board for the Texas Instruments PC.

With Time Spectrum, you can combine up to six powerful functions—plus two advanced software programs—on just one board. And get performance and features like nothing else.

## **For the IBM PC, Compaq and Columbia, maximum capability in minimum space.**

For example, Time Spectrum is the only multi-function board that lets you expand your IBM PC from 64K up to 512K RAM. Add a calendar clock. Add as many as two RS-232 asynchronous communications ports, or two synchronous and one asynchronous communications port. Plus print spooling and as much as 320K of RAM disk memory.

Up to four I/O ports—in just one slot.

How did we do it?

With the Cliffhanger™ A unique, RFI-shielded connector system that solves the problem of tying two or more I/O ports to peripheral equipment like a printer or modem, without consuming two or more slots. And only Persyst has it.

The Time Spectrum Cliffhanger™  
So ingenious, it's patented.

What's more, expansion functions can be plugged right onto the Time Spectrum board. Or added with Versapak™ piggyback modules. So you can add exactly the capability you need, when you need it.

## **Extra flexible expansion for the IBM XT.**

For the IBM XT, Time Spectrum not only delivers exceptional one-board expansion capability, but extra flexibility, too.

First, we designed Time Spectrum so you can add the RAM you want without having to fill the memory rows on the XT mother board.

And with Time Spectrum plug-in expandability, you can continue to add functions as you add requirements.

Start with basic memory and a calendar clock. Then add another asynchronous communications port. Parallel printer port. Additional memory. Or any combination of functions.

With Persyst, the choice is yours.

## **And now, one-slot capability for your Texas Instruments PC.**

Now there's even a Time Spectrum multi-function board for your TI PC. With it, you can add up to 512K RAM, two serial ports, calendar clock and light pen port—capability to handle even the most complex and difficult computing functions.

And still only consume one slot. The Persyst Time Spectrum board.

Maximum expandability now. And quality and versatility so you can keep on expanding later.

See your IBM or TI PC dealer and insist on Persyst.

# CHAIRMAN OF THE BOARDS MYLEX

## THE Graphics Card for IBM PC/ XT You've been waiting for !!!

Using a single expansion slot, the MYLEX CHAIRMAN replaces the IBM monochrome display/parallel printer adapter and color/graphics adapter card. In addition, the MYLEX CHAIRMAN is fully compatible with all PC/XT software for monochrome, color graphics and alpha-numeric modes. That's right, no changes and no modification required to your software to incorporate IBM standard graphic modes on most monochrome monitors.

## THE MYLEX CHAIRMAN CARD FEATURES:

- Graphics on IBM monochrome monitor
- Shades of green on monochrome monitors
- Graphics on color monitors
- Parallel printer interface
- Can support non-IBM monitors

## Move up with these Special Enhanced Features:

- On card character RAM for custom definition of character set.
- Graphic modes are supported on IBM monochrome or color monitors.
- Up to 16 shades of green on monochrome monitors.
- 320 x 200—16 color graphics mode.
- 640 x 200—4 color graphics mode.
- 640 x 400—B/W graphics mode.
- A MYLEX software library on diskette supports enhanced features and is included.

Full emulation of IBM's display adapters, without modification or additional software.

# Be confident because your PowerType Daisywheel correspondence becomes you.

When you can't personally be there, only the clearest typed correspondence should be your substitute. With a PowerType Daisywheel printer your documents look highly professional. And so do you!

PowerType. It's "typewriter friendly." Using a simple drop-in ribbon cassette, it bi-directionally types executive quality correspondence at 18 cps with a print wheel that holds 96 flawless characters.

Designed for personal or business applications, PowerType's carriage accepts paper that ranges

from letter to legal size, from fanfold to roll to cut sheet. You can set right and left margins, vertical and horizontal tabs.

Plus, of course, PowerType has both serial and parallel interfaces to enable it to connect to just about any personal or business computer.

So the next time you're going face to face through the mail, rely on PowerType. It will help you make a professional impression. And that's always very becoming.

# Software With Manual Appeal

A technical writer tells how some simple tactics can help software producers upgrade the appearance of their documentation to make their products the buyers choice.

**Y**ou're searching through the shelves of a personal computer store for just the right software package, possibly a word processor or a database manager. There are many products to choose from, so you don't want to make your decision lightly, especially with software prices that range up to \$500. You finally narrow down your choice to two products that, according to the salesperson, have roughly equivalent features. How do you decide which one to buy?

The first thing you do is look at the manuals. When you pick up the manual for product A, you notice that it is similar in size to the IBM PC manuals—small and easy to carry. It has an attractive hard-cover binder with stenciled lettering, and it is boxed like the PC manuals for easy shelf

storage. You open the manual and discover typeset text, multicolored printing, and large, informative headings.

In contrast, the manual for product B does not come in a binder. It consists of 8½-by-11-inch pages stapled together at the side. When you open this manual, you discover that the text was produced on a dot-matrix printer and that the pages are faded photocopies of the originals.

Without looking any further—without reading the manuals and without trying the software on the store's machine—which product are you more likely to purchase?

This example illustrates a tangible benefit of good packaging. Given two similar products, a customer will purchase the one with the higher-quality appearance. And

since diskettes look pretty much alike, customers often turn to manuals to evaluate the quality of a software program.

How can manual writers put quality—or at least the look and feel of quality—into the manuals they write? This article describes some of the methods I have discovered in my own line of work as a writer of technical manuals.

## Good-looking Is User-friendly

The documentation that accompanies the IBM PC manual was widely praised upon its release, and today, people continue to find it well-written, easy-to-use, and accurate. Why?

If you examine the PC manuals closely (don't just read the *Guide to Operations*; look at Appendix C of the DOS manual

# YOU DESERVE EXECUTIVE ACCOMMODATIONS. YOUR PERSONAL COMPUTER DOES, TOO.

LIFELINE puts your personal computer in the executive suite — the same tasteful surrounding you demand for yourself.

Designed for the IBM PC, XT, IBM Expansion Chassis and the Dec Rainbow, the LIFELINE Tower will unclutter your working area by housing your system unit *beside* your desk — not on top of it.

The LIFELINE Tower is available in solid walnut, solid oak, or a textured finish that matches your PC. Other types of hard woods, finishes and side panels are available from our special order shop.

To accompany the LIFELINE Tower, matching monitor and printer stands have been designed. The printer stand fits over the LIFELINE Tower, or can be placed on your desk. The monitor stand tilts and swivels to whatever position you desire. Monitor and keyboard extension cables are also available.

The LIFELINE Tower . . . a personal computer's executive suite.

Ask for the LIFELINE Tower at participating dealers, or order directly from Lifeline Information Systems, Inc. P.O. Box 766 Sandy, Utah 84091 801 566-5340.

IBM Trademark IBM Corp.

CIRCLE 305 ON READER SERVICE CARD

## MANUAL APPEAL

too), and compare them to similar kinds of manuals, you'll find that there's not too much difference in the quality of the writing. The PC manuals contain their share of passive voice and confusing half-sentences. So why are people convinced that the PC manuals are great? There are three primary reasons.

First, viewed from the outside, the PC manuals are attractive and professional. They come in sturdy binders with matching boxes that promote convenient shelf storage. The binder and box colors are subdued earth tones, which blend easily into any setting.

The effect of the packaging is subtle, but certain. The manuals look expensive, authoritative, and friendly. The manuals look so nice that you almost want to cuddle up before a cozy fire and pour over them.

Second, upon opening the PC manuals, you discover that the text is typeset and that color distinguishes displays and example commands from the remainder of the text. These features provide the manual with a professional and authoritative look that reinforces the good impression you formed earlier. Though the use of color means little in terms of the manual's content, it provides a "finish" that can be meaningful to a potential buyer. The main purpose of color as it is used in the PC manuals is to make the information easier to follow. A reader may conclude from this that the writers of the manual have done other things—such as providing clear, accurate instructions—to make the documentation easy to use.

Third, when you read the IBM manuals, you notice that each page contains small, digestible pieces of information broken into small sections or numbered steps. The typeface is large, and there is liberal use of white space.

Limiting the amount of information on a page reduces the confrontation factor a reader experiences when turning to the page. A page containing paragraph after paragraph of closely typed text is intimidating. But a page containing a lot of

white space looks easy to read, especially if there are useful section headings to break up the information into small, understandable topics.

The writers of the PC manuals understood that it's easier to comprehend several small, simple things than one large, complicated one. Therefore, they divided procedures into small, simple steps. Each step is easy to comprehend.

### Learning from IBM

If you are in the business of producing manuals, what can you learn from the PC manuals? If you have significant financial resources, you can invest in handsome packaging as IBM did. Several companies, such as IUS with *EasyWriter II* and Lotus with *1-2-3*, used boxed manuals with packaging that is almost identical to IBM's.

But binders and boxes are expensive—more than \$5 a manual. Typesetting can cost several thousands of dollars, and color adds to the already expensive costs of printing. Often, small companies barely have enough money to produce their products; expensive production costs for manuals are beyond their means.

But there are ways to keep the costs down and still produce manuals that put readers in a good frame of mind before reading.

First, you can use pages that are the same size as those in the PC manuals (5½-by-8½-inch) or a similar size (VisiCorp uses 6-by-9-inch pages in its *VisiCalc* manual). Small-sized pages cost less to print than 8½-by-11-inch pages (although you may have to print more of them), and they give the reader a much better impression of your product. If you print your manual on standard 8½-by-11-inch paper, you give the reader the impression that you ported the product from another system and modified it to run on the PC. This means, according to some, that your product is inferior to those developed especially for the PC.

If you compromise on page size, users might wonder what else in your product

# Diskette Drive Alignment!

## ReadiScope™

ReadiScope is a comprehensive diagnostic program that analyzes the current status of a diskette drive. A drive can be tested in seconds without removal. Adjustments to head, spindle hub alignment, and rotational speed can be made in minutes without special equipment.

- Floppy drive testing and alignment
- No special equipment needed
- Drive can be tested while installed:
  - Under normal operating conditions
  - Saves removal time
- Results presented graphically
- Fast—1 minute for general checkout
- Works with single or double sided drives
- Ideal for use by:
  - retail stores
  - repair shops
  - multi-PC user's
  - PC clubs
  - users with critical data
- Includes special diagnostic diskette

Requires 48K IBM PC with one operating drive. Uses monochrome or graphics display. \$295 including special diagnostic diskette.

# dBASE and NEW! dBASE WINDOW DOOR

## PRODUCTS FOR THE FUTURE— AVAILABLE NOW!

dBASE WINDOW is a full-fledged dBASE II Application Generator. Working from your design, dBASE WINDOW generates and runs record keeping applications of all kinds, quickly and effectively. Just draw your input screen and report formats and dBASE WINDOW will create your application for you.

dBASE DOOR is a new product for those who only require the report generating capability of dBASE WINDOW. dBASE DOOR can be used with existing dBASE II command files and databases, providing the most powerful report generation available for dBASE II. If you own QUICKCODE or AUTOCODE, you need dBASE DOOR!

dBASE WINDOW and dBASE DOOR have the unique capability to build upon a relation between two independent databases. Here's how:

Job Records				
ADDRESS	FIRST NAME	LAST NAME	EMPLOYEE NUMBER	DEPARTMENT NUMBER
Personal Records				

Any two databases can be linked by a common field. In this example, the field 'last name' establishes a relationship between the personal records file and the job records file. Using dBASE WINDOW or dBASE DOOR, you may now print reports which contain data from both databases!

Compare the features of dBASE WINDOW with any program generator:

- Any number of databases may be present in an application
- Up to five indexes per database
- Real time interactive queries
- Built-in powerful free-form report generator, also available separately as dBASE DOOR
- Uses two databases in one report
- Easy to add custom code when necessary to meet special needs.

**Requirements:** CP/M® and dBASE II 2.3B; CP/M-86® or PC-DOS and dBASE II 2.3D. Disk space required for dBASE WINDOW: 400K or more.

dBASE WINDOW is \$249, dBASE DOOR is \$149, either manual only \$20 (manual price will be credited toward future purchase of program).

## MANUAL APPEAL

you compromised. Also, use the best-looking binding you can afford. If possible, supply loose-leaf pages with a three-ring, hard-cover binder. If that's too expensive, try to find a less-expensive three-ring binder. A manual with loose-leaf pages is easier to update with change notices (a subtle hint to your users that you intend to support them with updates).

If supplying a three-ring binder is too expensive, consider perfect binding, which is less expensive than supplying a separate binder, but still attractive. With perfect binding, pages are glued to a spine. Paperback books are perfect-bound, as well as some large magazines (PC, for instance). Although a perfect-bound manual is hard to update, it gives the favorable impression that your manual is a finished product and not subject to revision.

Another alternative is saddle-stitching. Saddle-stitching uses double-sized pages that are folded in half. Staples at the line of the fold keep the whole thing together. Magazines such as *Time* and *Newsweek* use saddle-stitching. Saddle-stitching is usually cheaper than perfect binding, and it looks almost as nice. However, there is a limit to the number of pages a saddle-stitch manual can contain (usually 50 or 60 pages, depending on the thickness of the paper). But saddle-stitched manuals also are hard to update.

You should consider stapling your pages together at the side (side-stitching) only as a last resort.

### Cover and Type Style

Regardless of the kind of binding you choose, select a cover that is attractive and appropriate for your product. Unless your product is a game or a children's product, use subdued colors. Avoid using just black and white.

Avoid using drawings of people or familiar objects in your cover unless the drawings are very stylized. Drawings of familiar objects are seldom perfect representations. Readers often notice this and frequently form a negative impression of the product.

## Encounter REVELATION

For \$950, Revelation Software by Cosmos will give your PC capabilities that no microcomputer has ever had before. Through a versatile, high performance Relational Data Base Management System developed by Cosmos, Revelation will give your microcomputer all the power and sophistication of a minicomputer.

Revelation features a data base with variable-length fields and records, (up to 64K), and unlimited files and accounts. File size is

limited only by disk size.

Also featured: A powerful, hybrid programming language.

A fourth generation applications and program generator. Our programs write programs!

Communications functions that give your PC the power to utilize applications, programs, and data from thousands of existing mainframe and minicomputers.

8087 math chip support

Revelation co-exists with MS/DOS™ or PC/DOS™ 1.0, 1.1,

2.0 versions, and is compatible with the IBM PC™, XT™, COMPAQ™, Corona™, Columbia Multi-Personal® and the Eagle 1600™. It's also compatible with minicomputers utilizing the PICK Operating System™. Minimum configuration requires 320K memory and 8087 math chip.

What will counteract NDC  
74-0054-60?

Gary: The pedigrees for next week's  
auction are as follows...

Sold 1000 shares at 33 for net profit  
of 6000. Richard.

Wouldn't it be great if you could use your IBM®PC to tap into vast resource libraries across the country? To transfer files to your partner, update? Or from your broker, down the street?

It's possible. All you need is a modem, to connect your computer to others. Down the hall. Or thousands of miles away.

dial, answer and disconnect calls. Automatically. And without going through the telephone receiver, making them far superior to acoustic coupler modems.

**Choose your speed; choose your price.** The lower-priced Smartmodem 300 is ideal for local data swaps and communicates at 300 bps. For longer distance and larger volumes, Smartmodem 1200 operates at baud rates of 300 or 1200, with a built-in selector that automatically detects transmission speeds.

Both work with rotary dials, Touch-Tone® and key-set systems; connect to most time-sharing systems; and feature an audio speaker.

Smartmodem 1200™ is also available as a plug-in board. Developed specifically for the PC, it comes packaged with Hayes' own communications software, Smartcom II™.

**Smartcom II. We spent a lot of time developing it, so you can spend less time using it.** Smartcom II prompts you in the

simple steps required to create, send, receive, display, list, name and re-name files. It even receives data completely unattended—especially helpful when you're sending work from home to the office, or vice versa.

If you need it, there's always "help." This feature explains prompts, messages, etc. to make communicating extra easy.

With Smartcom II, it is. Case in point: Before you communicate with another system, you need to "set up" your computer to match the way the remote system transmits data. With Smartcom II, you do this only once. After that, parameters for 25 different remote systems are stored in a directory on Smartcom II.

Calling or answering a system listed in the directory requires just a few quick keystrokes.

You can store lengthy log-on sequences the same way. Press one key, and Smartcom II automatically connects you to a utility or information service.

**Hayes Smartmodem. Think of it as your computer's telephone.** Hayes Smartmodem 300™ and the faster Smartmodem 1200™ allow you to communicate over ordinary phone lines.

But any modem will send and receive data. Smartmodems also

**Hayes®**

Smartmodem 100, 1200 and 1200B are FCC approved in the U.S. and DOC approved in Canada. All require an IBM PC with minimum 96K bytes of memory; IBM DOS 1.30 or 1.60, one disk drive, and 80-column display.

Smartmodem 1200B. (Includes telephone cable. No serial card or separate power source is needed.)

Smartcom II communications software

NOTE: Smartmodem 1200B may also be installed in the IBM Personal Computer XT or the Expansion Unit. In those units, another board installed in the slot to the immediate right of the Smartmodem 1200B may not clear the modem; also, the brackets may not fit properly. If this occurs, the slot to the right of the modem should be left empty.

And, in addition to the IBM PC, Smartcom II is also available for the DEC Rainbow™ 100, Xerox 820-II™ and Kaypro II™ personal computers.

**Backed by the experience and reputation of Hayes.** A solid leader in the microcomputer industry, Hayes provides excellent documentation for all products. A limited two-year warranty on all hardware. And full support from us to your dealer.

So see him today. Break out of isolation. Get a telephone for your personal computer. From Hayes.

## MANUAL APPEAL

Your company logo is important, too. A familiar-looking logo placed in a familiar spot on your manual can build confidence in your product.

If you can afford to typeset your manual, do it! Typesetting is probably the best thing you can do to build a reader's confidence in your manual.

Typesetting costs vary depending on the area of the country in which you live, the number of complicated tables and figures in your manual, and the number of pages in the manual. A 100-page manual could cost two to three thousand dollars.

To keep your typesetting costs down, look for vendors that accept word processing diskettes as input to the typesetting equipment. This saves you the cost of rekeying your manual, and it also saves you the trouble of proofreading the entire book after the typesetter returns it to you. Many typesetting vendors now have the ability to read PC-formatted diskettes and interpret *WordStar* files.

If you look at your production costs as a whole, typesetting is not as expensive as it seems. Typesetting gives you true proportional spacing, and the clarity of typeset characters allows you a smaller typeface than dot matrix or letter-quality printers provide. Therefore, you can get more information on a typeset page without making the page look crowded.

When you consider that a print shop charges you by the page (let's suppose 2 cents per page for this example), you can see that a 100-page manual that is reduced to 70 pages by typesetting costs \$1.40 to print (versus \$2.00 for the nontypeset version). If the typesetting costs \$2,000, you can defray all the cost by printing 3,334 manuals. If this seems like more manuals than you will ever print, consider that by printing 1,500 manuals, you defray almost half the cost.

### A Word about White Space

Whether or not you typeset your manual, you can still make it more attractive to your readers by effective use of white space.

There are many tricks you can employ to increase the white space, but three that are easy to incorporate into manuals are bullets, numbered steps, and breakouts.

Bulleted information is set off from the remainder of the text with spaces, indentation, and heavy black dots (usually lower-case o's filled in with black ink).

Use bullets to list a series of items for which order is not important. For example, you can use bullets when listing the important features of your product, the required hardware, or the topics of an upcoming section.

Numbered steps, like bullets, are used when making lists of things. However, you should use numbered steps when the order of the elements in your list is important. Numbered steps are used most often for hardware assembly instructions, software installation procedures, and sample user sessions. In these kinds of documentation, the numbers break up complicated instructions into a number of short, simple tasks. This format provides an easy step-by-step guide that reassures readers they haven't missed steps or glossed over something important.

Numbered steps are especially helpful if the reader is entering the commands at the keyboard while reading the instructions. The use of space separating the steps allows him to slide a piece of paper down the page as he reads, thereby keeping his place as he types out the instruction on the keyboard.

Breakouts are words that are "broken out" from the rest of the text; that is, they appear on the left side of the page, while the main body of text is shifted to the right. Like bullets and numbered steps, breakouts are used for lists. However, breakouts work best when you want to list a series of key words and their definitions, say, for instance, in a glossary or when defining parameters within a command.

The following is an example of how breakouts can be used to describe command parameters.

The format of this command is:  
PERMIT filelist access [USER=user]

**“TaskManager  
has delivered  
me from the  
nightmare  
of project-  
tracking  
paper-  
work!”**

William T. Sand  
Chief Engineer  
Hathaway Corporation

If you manage people and jobs, coordinate due dates and juggle workloads, TaskManager can help you, too. This practical management tool lets you spot conflicts and overloads, balance schedules and ultimately get more done in less time. TaskManager produces reports and Gantt charts on the screen or on your printer. Hand TaskManager's concise charts right over to your department managers, project managers or assistants. They'll immediately know what to accomplish, when.

So get better organized—get the quick to learn, easy to use task managing system—TaskManager by Quala. For the IBM PC and compatible computers (PC-DOS 1.0, 1.1 and 2.0).

## MANUAL APPEAL

[DATA] [DIRECTORY] where:

- |           |  |
|-----------|--|
| filelist  | A list of files.   |
| access    | An access character which grants the corresponding access to the file list.                              |
| USER=user | An optional parameter which specifies a user (other than the operator) for whom the access rights apply. |
| DATA      | An optional parameter which allows you to specify that only DATA files are affected.                     |
| DIRECTORY | An optional parameter which allows you to specify that only directory files are affected.                |

In the example, it is easy to tell where the description of one parameter ends and the description of the next begins. This is helpful both to novice users and to experienced ones who already know how the command works in general, but who need specific information about one, or selected, parameters. Instead of searching through an entire paragraph of information to find the description of a particular parameter, the reader can simply scan the breakouts on the left side of the page to spot the ones of interest.

### Conclusion

By examining different kinds of packaging and choosing the best you can afford, you will improve your product's appeal. And by using bullets, numbered steps, and breakouts to increase white space and make information easier to find, you demonstrate that you are committed to providing helpful, easy-to-follow instruction. These tactics can have a great impact on sales, especially in a software market where a customer's decision to buy may hinge on the quality of the manual. ■

# Bye-Bye Qwerty

The obfuscating, finger-tangling Qwerty keyboard may be losing ground to the user-friendly Dvorak.

**E**very job has its hazards. A baseball player might pull a hamstring rounding third base. A carpenter, while aiming for a nail, might hammer his finger instead. And anyone who works with a keyboard is almost sure to develop aching wrists, arms, and shoulders.

Though the computer is certainly a modern contrivance and in most respects reflects the latest developments from today's technological geniuses, its keyboard letter arrangement is an anachronism that has successfully resisted change for 110 years. This archaic keyboard layout, nicknamed Qwerty for the first six letters on the second row, has succeeded in tangling fingers, shortening tempers, and generally fatiguing and frustrating

keyboard users since it was invented.

Thanks to a fellow named August Dvorak, however, there is a simplified keyboard that streamlines typing and it is available for the IBM PC as either hardware or software.

The Dvorak keyboard is not new—it was designed in 1932. August Dvorak was a professor of education at the University of Washington and an admirer of Frank and Lillian Gilbreth, the couple famed for their early studies of ergonomics. As part of time and motion experiments in which they utilized a motion picture camera to spot inefficient movement in a variety of tasks, the Gilbreths made films of typists in action. These films clearly showed the inefficiency of the Qwerty keyboard. To

S. CHIVAST

## QWERTY

The ubiquitous Qwerty keyboard, a standard since the mid-19th century.

reach the proper keys, fingers had to perform acrobatics.

Bothered by this wasted motion, Dvorak decided to develop a better keyboard. Backed with grants totalling \$140,000 from the Carnegie Foundation, he began his project.

He scrutinized the Gilbreths' typing films and classified the easiest and hardest finger reaches. He then painstakingly examined thousands of words to discover the frequency of individual letters and letter combinations.

Dvorak's studies convinced him of the uselessness of Qwerty. "It is possible to make, at random, dozens of typewriter keyboards that are as good or better than [Qwerty]," he commented. Dvorak tore Qwerty apart and designed a new keyboard layout, for which he obtained a patent in 1932.

### A Better Idea

There are nearly 4,000 words that can be typed within Dvorak's home row, according to tests run by Larry Denenberg, a graduate student in the Computer Sciences Department at Harvard University. His tests also show that only about 100

CIRCLE 697 ON READER SERVICE CARD

words are possible using that row in the Qwerty system. Even the number of letters within this row favors Dvorak—it contains ten compared to Qwerty's nine.

After determining the home row, Dvorak placed the next most frequently used letters up a row. His studies of typists' finger movements revealed that it was easier to reach up than down. The least common letters, q, j, k, x, b, m, w, v, z, were positioned on the bottom row.

With this layout, the keyboard vastly reduces what are known as typing "hurdles." A hurdle is a pair of adjacent letters that are typed by the same finger, one key-stroke in the top row and one in the bottom row, obviously a clumsy and fatiguing maneuver. Hurdles are particularly undesirable when they are consecutive. The word *piece* is an example. There are nearly 1,200 words with multiple hurdles in Qwerty, according to Denenberg. Utilizing Dvorak, there are none.

There are three major advantages to the Dvorak keyboard—reduced fatigue, reduced errors, and greater productivity.

The key to the simplicity and effectiveness of Dvorak is its home row. It contains all the vowels and the most frequently used consonants: d, h, t, n, s. These ten letters, located directly under or to the side of the index fingers in home position, allow 70 percent of all keyboarding to be performed without lifting fingers up or down a row. By contrast, Qwerty, with just one vowel and the infrequently used consonants j, k, l in this row, permits just 32 percent home-row keyboarding, forcing repeated row shifts.

The Dvorak system also cuts down the

The Dvorak ergonomically designed keyboard layout.

number of words that must be typed with one hand. Based on Denenberg's tests, only 104 such words exist on Dvorak, but over 2,000 on Qwerty. The newer keyboard enhances rhythmic, balanced typing from one hand to the other, which considerably lessens fatigue. Dvorak further increases productivity for the predominantly right-handed public. Due to letter sequencing, 56 percent of the work is done by the right hand and 44 percent with the left. Denenberg was able to show that Qwerty reverses this ratio—57 percent is performed with the weaker left hand and 43 percent with the right.

Far less finger reaching, less awkward movements, better rhythm and more appropriate hand distribution naturally result in reduced errors. Thurman Clark, of Oregon's Public Employees Retirement System, estimates that using Dvorak has cut his workers' errors in half.

Productivity is, of course, the bottom line. The increase in production, using Dvorak, has been estimated at 10 to 40 percent. The savings realized by the Public Employees Retirement System falls in the upper portion of that range. "We have saved money," cites Clark, "and have

benefited in other tangible ways. Because our people aren't as fatigued at the end of the day, they are happier with their jobs. This results in fewer sick days taken and minimal employee turnover. Training new employees is relatively rare."

Certainly another advantage of Dvo-

August Dvorak developed his simplified keyboard while a professor of education at the University of Washington in 1932.

rak, though it's played down by advocates, is an increase in typing speed. It is a benefit that is not particularly stressed, says Virginia Russell of the Dvorak International Federation in Brandon, Vermont. "But ergonomics, the harmonizing of workers with machines, certainly is," she says. "It's an issue that's become increasingly important for workers, and Dvorak fits right in. Increased comfort and greater productivity are the factors we emphasize about Dvorak."

### A Dvorak Convert

Those who have been exposed to Dvorak are enthusiastic converts. "I am a little bit of a crusader on the subject," admits Tom Root, a computer programmer for Apple Computer and a Dvorak disciple. "I've been using Dvorak for a couple of years and would never go back to Qwerty. Why use Qwerty, a keyboard designed to be difficult, instead of Dvorak, a keyboard designed to be simple?" He admits, though, that he was skeptical when a friend first convinced him to try Dvorak. Bad memories of learning Qwerty haunted him. "It took me 3 to 4 months of study, 2 hours a day, to learn Qwerty. I didn't want

# ABM presents THE TALKIES

## 3270 COMMUNICATIONS CO-PROCESSOR FOR THE IBM PC

ABM's PS-3270 Subsystem uses our Intelligent Communications Co-processor (ICP) board featuring a 2808 Processor with 64K memory, 4 serial ports, a parallel printer port and powerful multi-tasking emulation software. It uniquely provides concurrent co-processing, expandability to a cluster of PCs, flexibility to support multiple protocols and substantial cost savings.

### CONCURRENT CO-PROCESSING

With ABM's PS-3270 emulation subsystem your PC can maintain host communications while performing local processing. This allows

continuous access to mainframe data bases for integrated PC/Mainframe decision support applications. You don't have to worry about dropping your mainframe link each time you use your PC in a local mode.

You can use a parallel printer connected to the ABM board to perform independent host generated printing in the background while doing other applications on your PC.

### EXPANDABILITY TO CLUSTERS OF UP TO 13 PCs

ABM's PS-3270 provides low cost emulation of 3276/3274 cluster controllers with downline

PC's operating as IBM 3278 terminals. The IBM PC functioning as a cluster controller remains fully capable of local processing at all times.

### FLEXIBILITY TO PROTECT YOUR INVESTMENT

ABM's ICP with its own multi-tasking software can support multiple emulations such as 3270 BSC, 3270 SNA/SDLC, 3780 RJE, 5251 and asynchronous terminal protocols on the same hardware.

### COST SAVINGS

Multifunction IBM PC work stations with ABM's intelligent emulation software and hardware cost up to 70% less than conventional single-function 3270 configurations without personal computing capability.

ABM's incremental cost per workstation for 3270 emulation in a level 3 configuration is over 75% less than the incremental cost of coax interfaces that connect PC's to existing IBM 3274 cluster controllers.

So call us today and we'll usher you into the talkies.

Dealer and OEM inquiries welcome!

to go through anything similar to learn another system, no matter what the claims of its ultimate benefits," he says.

With a Dvorak layout before him, he performed typing exercises for an hour. After that, he went about his work in his normal manner. "Within a week or so, my speed was up to its Qwerty level, an admittedly not spectacular 35 words per minute," he remembers. "The most immediate benefit was lessened fatigue." Root uses a software program that converts his computer keyboard to Dvorak. "During that first week I just kept in mind the home row, the vowels, and the essential consonants. My fears of learning a new system quickly evaporated. The intelligent layout of the keys and the large amount of work that can be done just within the home row make it easy."

Because Qwerty is such an established keyboard, however bad, it has gotten in the way of wide-scale Dvorak acceptance, Root claims. "We often get negative reactions to new ideas. People habituated to doing things one way are reluctant to try something different."

Root feels computers will spur Dvorak acceptance, something that probably wouldn't happen if only typewriters were involved. "There has always been a stigma attached to typing on a typewriter, but not to working with a computer. In fact, having and working with a computer is considered a status symbol.

"Many professional managers today never learned to type. But they are being required to operate a computer. They have to type, of course, to enter data. Anyone who cannot operate a computer keyboard is at a real disadvantage and is considered almost illiterate. Corporate power, in many ways, depends on the ability to write and that writing is increasingly being done on a computer.

"The Dvorak keyboard, since it is so easy to learn and use, should be a real benefit to these people. Through it, they will have a competitive business edge they might not have had if forced to rely on Qwerty."

## Qwerty's Ignoble Birth

Intentionally misdesigned to slow down typists, Qwerty was born to frustrate all keyboard users.

The name "Qwerty" sounds faintly contemptible, as well it might. It was hatched over 100 years ago in an environment of shady dealings and dirty pool. The participants were a bunch of pretty fair tinkers—the inventors who came up with the first commercially practical typewriter. Led by one C. Latham Sholes, this Milwaukee contingent put together a working typewriter model in 1868. Within 5 years, manufacturing was turned over to E. Remington & Sons, gun makers, of Ilion, New York.

Much to the horror of Sholes and his band, though, their original typewriters were no match for even the earliest typists. Every time the typists began clacking away, the typewriters jammed.

Troubled, the inventors scurried back to their drawing boards. Their typewriter was in trouble, and they knew it. After much head scratching, pondering, and diagramming, they concluded the problem wasn't with their typewriter at all, but rather the typists. They were going much too fast. They had to find a way to slow them down.

Drastic measures were necessary if

their machine was going to be anything more than a passing curiosity. And drastic measures, they determined, necessitated devious means. Someone (name unknown—such distinctions are better left unclaimed) suggested "fixing" the keyboard layout in order to get the typists to slow down. A member of the Milwaukee team consulted his son-in-law, a chap who was a Pennsylvania school superintendent. Unsuspecting, he didn't blink an eye when asked to supply "Dad" with the most frequently used letters in the English language.

Armed with this information, a new keyboard was designed that placed these letters in separate quadrants. By chance, this arrangement spelled out Qwerty on the top row of letters. Because frequently used letters were now all over the keyboard, a typist was forced to do a lot of reaching to locate desired characters. This reaching reduced speed and eliminated jammed typewriters.

Qwerty devilishly tangled a typist's fingers, bringing fatigue and frustration in its wake. But for a small group of Milwaukee inventors, the keyboard brought much rejoicing. —G.K.

A model of the first typewriter that used the Qwerty layout.

# THE UNDERRATED VIRTUES OF PLAIN VANILLA

Our Lemon has hogged the limelight, our Lime has made it to the White House, and our Orange and Peach have shared in the glory too. But there's a band of unsung heroes in the shadows with all of the surge protecting, noise filtering capabilities of their colorful cousins, with the same insured lifetime guarantee, and the same expert technology of EPD.

The only difference is color. (Or lack of it).

The Electro-Clamp™ line from EPD is made to do the same job, but blend into more sedate surroundings with its quiet, neutral exterior. The four Electro-Clamps share the same specifications as The Lemon™, The Lime™, The Peach™ and The Orange™, so if your needs for surge protection lean toward the conservative, choose Electro-Clamp™ I, II, IV, or V.

Remember, technology is more than skin deep.

DON'T PLUG IN WITHOUT US.

## QWERTY

### Key Tronic's Dvorak for the PC

In response to customer demand to maintain its position as industry leader, Key Tronic of Spokane, Washington, is marketing an IBM PC Dvorak keyboard. "Our company's whole purpose is to produce highly efficient keyboards," says marketing manager Mark Tiddens. "Dvorak certainly fits that mold."

Though Tiddens is convinced of Dvorak's superiority, he feels that people are going to put up quite a fight to keep their Qwerty keyboards. "It's going to be difficult to break the habits of all those people used to one system," he says. Keeping this fundamental resistance to change in mind, the IBM PC Dvorak is being projected, at least initially, as a limited seller for Key Tronic. In essence, the company is offering it as a service item, much like its keyboards for the handicapped and

for foreign languages. "It's entirely possible," Tiddens continues, "that in time, a healthy demand could develop for Dvorak." For the present though, the keyboard will not be shipped to distributors. It will be available only through Key Tronic headquarters.

A possible boost to the company's new product was IBM's announcement last July that it would sell its PC without the keyboard. That could spur sales of compatible replacements, which include Key Tronic's Dvorak. But it's too early to determine Dvorak sales, Tiddens states.

"To really make Dvorak happen," explains Tiddens, "it's going to take somebody like IBM using all its muscle. The sponsor has to bring it into the schools and introduce it to students just learning how to type. That's where keyboard allegiance begins and where Dvorak must be

established." At present, however, IBM is sitting on the sidelines waiting to see if Dvorak interest translates into new Dvorak sales. "For the last three decades, we have offered a Dvorak keyboard on our typewriters and rarely sold one," explains a company spokesperson. "The selection of a keyboard is entirely a user's choice, and our customers just haven't wanted Dvorak." Until customers start demanding Dvorak, IBM will be content to continue providing machines with Qwerty keyboards.

### Dvorak Software

Another way to achieve the Dvorak keyboard for the IBM PC is through software. Banking on public acceptance of Dvorak is Seasoned Systems, Inc. of Chapel Hill, North Carolina. In August, the company released *SureStroke*.

## TAX RELIEF

FROM **TAX**byte, Inc.

Makers of the famous "Commissioner" Professional Tax Software

Do you call in a specialist each year to perform emergency surgery on your tax return? And then feel like you're the one who needs to recover when you get the bill?

This year, get just what the doctor ordered. Without paying the price.

Announcing the "Tax Surgeon", affordable tax software for the IBM Personal Computer. For only \$49.95, it can provide you with the intensive care you need to automatically calculate and print your own tax return. The "Tax Surgeon" is fast, flexible and easy to use. . . and that's not a lot of quackery! It features simple "fill in the blanks" entry and full screen display for easy input.

### The "TAX SURGEON"

**\$49.95**

Tax Deductible

#### HELP

On screen "Help" messages guide you effortlessly through the income tax maze.

REQUIRES IBM-PC DOG 2.0, 128K AND 2 DISK DRIVES

The "Tax Surgeon" automatically computes and prints the following schedules and forms:

1040 PG 1	SCH Q	3903
1040 PG 2	SCH R/RP	4136
WAGES	SCH SE	4255
SCH A	SCH W	4562
SCH B		4797
SCH C	2119	4835
SCH D	2210	5695
SCH E	2440	6251
SCH ES	2441	6252
SCH F	3468	DATASSTR

This year, before you need relief, get relief, without paying the price with the "Tax Surgeon" by TAXbyte, Inc. Send your order today TAXbyte, Inc., 3803 28th Street, Moline, IL 61265

## QWERTY

The *SureStroke* translator intercepts and translates key strokes. It remains resident in memory along with DOS. If the letter *s* on Qwerty is pressed, for instance, *SureStroke* translates it to Dvorak and delivers the letter *o*. You can exclude from translation keystrokes preceded by the Ctrl or Alt keys. This option is valuable with a program such as *WordStar* that demands the Ctrl key to define commands.

Since most people are not fluent with Dvorak, Seasoned Systems provides a training program called *Coach*. "For someone who has never typed," says Seasoned Systems' spokeswoman Jane Helwig, "15 to 18 hours with *Coach* will net a 40-words-per-minute typing speed."

The package also includes a *SureStroke Learning Tape*. It's a cassette that is designed to put the Dvorak beginner in the proper frame of mind. "It is really a form

of self-hypnosis, but we try not to use that term," Helwig relates. "We know it scares people."

Helwig is convinced that the *SureStroke* training program is essential to the product's success. "We thought of coming out with just the software but decided against it because it wouldn't be any good for people who don't know Dvorak. It's still a brand new system for most people, and they need guidance."

*SureStroke* comes complete with transfer letters to convert Qwerty keys into Dvorak. Directions also are given for popping off the IBM PC keycaps and rearranging them.

### "Spoking" Interest

Interest in the Dvorak keyboard as a viable business tool is increasing. "Getting it into businesses used to be a pipe

dream," admits Dvorak Federation's Virginia Russell, "but not any longer."

Dvorak is reaching beyond the smattering of individual users such as Tom Root and small organizations such as Oregon's Public Employees Retirement System. Large companies are taking a serious look at Dvorak. Within the last few months, Russell has huddled with American Airlines, Exxon, Equitable Life Assurance, and Fireman's Fund. "Lots of companies are on the brink of switching to Dvorak," Russell says, "In 4 to 6 months, there should be implementation."

"At present, I feel as if I am sitting in the center of a bicycle wheel with interest in the keyboard spoking out all over." ■

Gary Kaplan is a San Francisco-based free-lance writer specializing in micro-computer topics.

Bob Wilson is waiting for the reports he needs...

...and waiting, and waiting, and waiting...

He could be rescued by **ResQ**™

ResQ is quite simply the easiest-to-use, fastest and most comprehensive information management system ever developed for the IBM Personal Computer. It was designed from the ground up to provide you with the exact information you need... only the information you need... in the exact form you need it... now!

Best of all, you don't have to know a thing about computers to take full advantage of ResQ almost immediately!

Like many other Data Base Managers, ResQ organizes, files, locates, controls and interrelates just about any kind of information. It prepares reports and mailing labels, is a general filing and reference system, handles customer records and inventories, tracks sales leads and follow-ups, and does the required calculating for any of these functions automatically. But that's where the similarity to other systems stops!

ResQ is the *only* system that allows you or a secretary to design your own forms and reports, create them right on the screen, then have them continuously available at the touch of a key! ResQ offers password protection to keep confidential information confidential, and does it on a number of different levels. ResQ reads, searches and sorts data faster than the fastest competitor we've tested.

ResQ's larger fields hold more information, and field sizes can be easily changed to increase your number of salesmen, products, files or reports. It allows for calculations on up to 8 levels of totals at report time, and interfaces with most popular word processing programs.

The ResQ "How-To" Manual is written in plain, simple English—not like a scientific textbook in a foreign language! It was created for immediate use by clerical help who had never touched a computer before. It's been tested... and it works! As an added feature, "help screens" are always immediately available to answer questions for the user, without having to turn to the Manual.

We believe you'll be absolutely thrilled with ResQ and the way it prepares reports, manages information and solves your business problems. We're so certain that we offer ResQ with a 30-day money-back guarantee of satisfaction. You can try ResQ in your own business environment and prove its value for yourself... completely without risk!

That's a very remarkable offer... but ResQ is a very remarkable system!

Order ResQ through your local computer store, mail the coupon below or call...

Orchid  
Creates  
PCnetPLUS<sup>™</sup>

## COST-EFFECTIVE ENHANCEMENTS FOR PCnet<sup>™</sup>

PCnet and PCnetPLUS are  
trademarks of Orchid Technology.

PCnetPLUS from Orchid Technology expands your PCnet system while still leaving plenty of room to grow.

PCnetPLUS is a series of PCnet enhancements that dramatically increase the capabilities of your IBM PC and PC-compatible local area network. The PCnetPLUS family includes both software and board-level products that integrate Orchid's PCnet with additional built-in functions. Best of all, these products free up additional PC slots and are priced below what you'd pay for the separate components. Here are some examples:

**PCnetPLUS Multifunction.**  
To PCnet we've added 64K of additional RAM expandable to 256K, and an EPROM socket for Orchid supplied or user-designed

programs. Even if you don't have a network, you can use this board to increase your PC's capability now, and permit immediate connection to a PCnet network later. An optional daughterboard adds an async port and clock/calendar.

**PCnetPLUS Diskless.** This card combined with on-board software allows PCnet to operate without any floppy disk at the user PCs; thus significantly reducing your system costs and increasing your PC's reliability.

**PCnetPLUS Floppy Controller.**  
We've integrated an IBM-compatible floppy controller and PCnet hardware on one board. All at a cost less than you would normally pay for the separate components.

As the creators of PCnet and

PCnetPLUS, we're committed to protecting your investment in microcomputer hardware by providing cost-effective, state-of-the-art networking capabilities. For more information on PCnet and PCnetPLUS, call Orchid Technology today at (415) 490-8586.

# 7 Good reasons why you should subscribe to *Creative Computing*.

## It's the Number One magazine of computer applications and software!

There's one place you can always be sure of learning more about microcomputer software and applications: *Creative Computing*.

Every month *Creative Computing* provides you with a continuing education on everything related to microcomputers and computer equipment. Useful articles, "how to" tutorials, exciting new applications, games and "no holds barred" reviews of the latest software and equipment make up a major part of *Creative Computing's* editorial content.

We give you probing features on programming breakthroughs and important news. Plus in-depth articles on elementary, intermediate and advanced software and applications topics—to help you develop your knowledge and skills, save hundreds (perhaps thousands) of dollars in unneeded software, discover uses for your personal computer that you might never have considered. Articles that increase your overall "computer consciousness." Here's how:

**1**

### ***Creative Computing* gives you things to actually do with a computer.**

Just owning a computer isn't enough. You've got to know what to do with it. That's why applications are our primary focus. Text editing, animation, graphics, business simulations, data base and file systems, music synthesis, control of household devices, communications, games—some of the applications and software you'll learn about in *Creative Computing*.

**2**

### ***Creative Computing* discusses business applications in simple, nontechnical language.**

If you're a business person who needs to know about the latest developments in word processing and office applications, turn to *Creative Computing*. We clarify such business applications as investment analysis, futures evaluations, data base management, mailing list programs, text editing, word processing and simulations. And all the software available for business people.

**3**

### ***Creative Computing* helps you decide which computer equipment is best for you.**

Our tough, no-nonsense equipment profiles arm you with the facts before you walk into a computer store. You'll know the right questions to ask and how to cut through the jargon and sales hype. We give you authoritative guidance in deciding what you need, what you don't need—and what's right for you and your pocketbook.

**4**

### ***Creative Computing* covers computer education in depth.**

We started out as a computer education publication, and we're still committed to the educational community. We regularly carry articles on designing educational software, evaluating educational software, teaching concepts and terminology in computer education, text editing applications for literature and computer simulations in the classroom—plus a great deal more.

**5**

### ***Creative Computing* brings you hours of mind-expanding game entertainment.**

We've got a soft spot for the computer game addict—and computer game software. We know you want to understand more about the new computer games flooding the market: which ones are easiest to learn? Require the most skill? Offer the most surprises? Give you the best graphics? Provide the most challenge? Contain a new twist? *Creative Computing* brings you the answers.

**6**

### ***Creative Computing* features the state of the art.**

Columns on the most popular personal computers, a "software legal forum," letters to the editor. Reviews of books, games, organizations, dealers and events. Fascinating interviews with leading innovators, equipment designers, program developers and game inventors—men and women who'll give you a real glimpse of the future!

**7**

### **Our price is right.**

By subscribing to *Creative Computing* now, you can save as much as 33% off the full subscription price. To learn elsewhere what you'll learn from *Creative Computing*, you might spend hundreds of dollars in course fees and books. Then you'd have to winnow out what you could use from all that you'd learned. But *Creative Computing* does that for you, so you'll have time to enjoy your own computing interests. And that saving of time makes this offer very inexpensive indeed.

**Join over 150,000  
*Creative Computing* readers  
by subscribing today!  
Just use the coupon

# Business Decision.

Let's be honest.

Despite the "personal computer revolution" in today's office, a lot of business decisions get made in some pretty arbitrary ways. That's because most of the *software* for personal computers isn't up to the job of helping you draw conclusions from the mass of information in your business.

## THE GREAT PERSONAL COMPUTER "UN-REVOLUTION."

Up to now, to use a personal computer effectively in the real world, you needed to use five different types of software packages: Electronic spreadsheet, information management, graphics, word processing, and telecommunications.

You had to learn how to use these five different, unmatched software packages before you could make the computer do what you wanted it to do. And information stored in one of these packages would rarely fit into another without a lot of trouble. This means you had to spend your valuable time pushing buttons and learning to become a computer expert.

Instead of using the personal computer as a tool for business decisions.

Not exactly a shining moment in the personal computer revolution.

## THE CONTEXT MBA:

### A SIMPLE IDEA WHOSE TIME HAS COME.

The Context MBA is software for the IBM PC, PC-XT, and Hewlett-Packard Series 200 personal computers that combines all the functions you'll ever need - spreadsheet, information management, report writing, graphics, and communications - into a single, easy-to-use package.

The result is a software package that's literally "greater than the sum of its parts."

### FIVE SCREENS - NO WAITING.

With the MBA you can connect your personal computer to your company's main computer and retrieve all kinds of business data. Like sales, product, or customer figures.

Sort, search, update, and store this information in your personal computer. Analyze it, prepare sales forecasts or study new business opportunities in

minutes, instead of hours.

While you're using the spreadsheet, use the MBA's graphics function to make spreadsheet figures come alive on your screen in charts or graphs. So you can visualize the effect of possible changes to your business.

This year, or five years from now. Instantly.

When you've made sense out of the possibilities, use the MBA's full-function executive report writer to put these words, numbers, and graphs into a finished, printed report.

At last, you can use a personal computer as a decision tool to turn more profit from the mountain of information that crosses your desk every day.

So now even "non-computer people" can make heads-or-tails out of the personal computer revolution.

## A GOOD BUSINESS DECISION.

Make a good, well-informed business decision right now:

Call us at 1-800-437-1513 (in California, call 1-800-592-2527), and get the name of your nearest computer store for a live demonstration of the Context MBA. We'll also send you a copy of our tell-it-like-it-is brochure, *Software Explained*.

If you have an IBM Personal Computer, ask for our free *Context MBA Sampler Disk* for a live demo of the MBA on your own PC.

# The Hidden Talents Of MailMerge

Though well-known as a mailing list handler, WordStar's sidekick has some little-known features that also let it play an important part in word processing and printing.

An old regular in MicroPro's star-studded lineup, *MailMerge* has long been known as a crackerjack mailing list handler. But *MailMerge* also provides print enhancement features to *WordStar* that no serious user should do without.

*MailMerge* is an optional file that is

## **MailMerge**

MicroPro  
33 San Pablo Ave.  
San Rafael, CA 94903  
(800) 443-0100  
(415) 499-1200  
List Price: \$250

Requires: 64K RAM, two disk drives, *WordStar*.

CIRCLE 696 ON READER SERVICE CARD

available with *WordStar* and *SpellStar* in MicroPro's "Professional" package. It can also be purchased as a separate program. It is not a database manager; you cannot sort with it; it will not help you maintain your mailing lists. *MailMerge* allows you to generate mailing list labels and create almost any form letter you can imagine with great ease and flexibility. You provide the basic list. You can use a database manager, or use *WordStar* in the nondocument mode. You'll need some program, such as MicroPro's *DataStar*, to sort and update your list (see "An End To Mailing List Madness" in this issue for more ideas). *MailMerge* takes your mailing list and merges each name or record into any document or format you create.

But a little-known fact is that *Mail-*

*Merge* is essential to all serious document production. It performs many important functions, such as printing multiple copies of a document (you can't do it with *WordStar* alone), chain printing files (such as chapters of a book), and inserting variables into a document (such as today's date). The power of *MailMerge* gives *WordStar* added features that make it one of the most complete word processing packages available.

## **Mailing Lists and Form Letters**

In its best-known role, as a mailing list and form letter generator, *MailMerge* actually lets *WordStar* become a form letter generator, which alone it is not. *MailMerge* allows you to take a list of names or data and merge it with a form or letter that

# THE NEWEST FEATURE ON THE 3000 FAMILY OF PRINTERS IS OUR NEW NAME.

GENICOM 3404

Our 3000 family of printers has an impressive list of features. But the most prominent new change on our printers is our new name.

Formerly the Data Communication Products Department of General Electric, we're now independently owned...and our new name is Genicom.

So the GE 3000 family is now the Genicom 3000 family. But while the name has changed, the product retains its established superiority.

The Genicom 3000 series of output printers still features speeds from 40 to over 400 cps. Single or dual mode printing. Type quality from EDP to NLQ. Multi-color printing. Graphics. Selectable type fonts, American craftsmanship and more.

Genicom 3000 printers will be as popular as ever with end users as well as OEM's, distributors, retailers and dealers...thanks to our list of outstanding features, plus the unique commonality advantages of several models all based on a single design.

And Genicom will also offer other products including our 2000 teleprinters and the soon to be introduced 4000 shuttle matrix printers. You'll find we have the same complete product line we had with GE.

Genicom. We have proven products, experienced personnel, established manufacturing facilities, a nationwide service network, plus a new commitment to excellence that stands behind our new name.

Genicom Corporation, One General Electric Drive, Dept. M311, Waynesboro, VA 22980. In Virginia, call 1-703-949-1170.

CIRCLE 158 ON READER SERVICE CARD

## MAILMERGE

you've created in *WordStar*. *MailMerge* relies almost exclusively on dot commands to instruct it. A dot command begins with a period in column one, followed by a two-character code. When you use dot commands that are exclusive to *MailMerge*, the flag "M" appears in the rightmost column of your *WordStar* screen. You can tell *MailMerge*, through dot commands, what data file to go to (.df filename) and how to read the variables (.rv) of each record. The command .rv tells *MailMerge* what to call each variable or field in your data records. Then you simply plant the names you've given each variable into your document, preceding and ending them with ampersands (&name&).

You can create labels or letters in any format as long as the read variable name (on the *.rv* line) are the same as the labels you put in your document (see Figure 1). Print the document using the M option from WordStar's main menu, and MailMerge will place the variable data into each place you've indicated.

Not only will it fill in the data you've supplied, but *MailMerge* will then reform your paragraphs (like *WordStar*'s "B command") to compensate for variable lengths of the data from one form to the next. *MailMerge* can use any kind of data file in which the data is separated by commas, as long as there are the same number of fields in each record. This feature of *MailMerge* allows you to produce large, highly personalized volume mailings.

*MailMerge's* ability to insert variable data makes it a valuable tool. Not only can it insert long lists of variables from a mailing list, personal touches included, but it can also insert single variables. And the really nice touch is that it can ask you to supply the variables (.av). Once you've typed in your answer, *MailMerge* inserts it into your text where indicated.

The implications are far-reaching, and the possible applications are many. One of the handiest uses I've found for this feature is to insert the current date in my page header or footer. I've always had difficul-

ty remembering to do this on my own.

### Aid For The Absent-Minded

When I'm creating the first draft of a document, as in Figure 2, I enter the line

```
.av 'Please don't forget to
enter the date ! ' .date.
```

My footer line tells *MailMerge* where to insert the date. As with multiple variables, the ampersands mark the spot (&date&). This is extremely useful for successive drafts of the same document, as I can always be sure that I am working on the most current one.

When it's time to print the file, I always

use the M option. *WordStar* then asks "Name of file to MailMerge?". After I type in the filename and hit the Esc key, *MailMerge* will ask for the date before printing out the file. Once I've entered the date and pressed return, my document is printed out with the date neatly inserted in each footer. If I don't want to take the time to answer, I can just press return. *MailMerge* will insert a blank space where I called for the date to be printed.

You can use this technique for a variety of purposes. One use I make of it is to insert the name of the *WordStar* file. Especially on in-house documents, this can save tedious searches through your disks

**Figure 1:** Setting up a form letter in WordStar, with dot commands and ampersands to instruct MailMerge.

**Figure 2:** MailMerge reminds the absent-minded writer to insert the date into the header or footer.

## MAILMERGE

for the file that matches the printout. This handy *MailMerge* feature can also be used to create personalized postscripts, operator identification, or almost anything you can dream up.

*MailMerge* also lets you create messages that will appear on the screen before the file is printed out. Insert the command `.dm`, and all the text in that line will appear on the screen when you print under the *M* option. You can leave notes for other users to read, instructing them to respond to questions about to follow (which you set up with `.av`). Even reminders can be displayed: "Remember to erase this file after you print it out." The message can be as long as you like, but each line must begin with `.dm`. This is ideal in situations in which users at different levels are using the same system.

As I mentioned earlier, *MailMerge*

and this list contains the names and addresses of all the really important people in the world:  
Joe Small 123 Main Street Santa Ave Maria, CA 99999

**Figure 3:** Turning off print-time formatting allows you to extend text past the document margins.

and this list contains the names and addresses of all the really important people in the world:  
Joe Small 123 Main Street Santa Ave Maria,  
CA 99999

**Figure 4:** With the print-time formatting on, WordStar will wrap inserted text.

reformats each paragraph in which a variable occurs, conforming to the margin and justification settings of the main document. This feature is called print-time formatting. There are times, however, when you might not want the variable data you're putting in the main document to be reformatted according to the same margins, such as when inserting addresses. In

these cases, turn off print-time formatting by inserting the command `.pf off`, and the inserted text will extend past the document margins, as in Figure 3. If you don't turn off print-time formatting, your text will conform to the document margins and *WordStar* will "word wrap" your inserted text, as in Figure 4.

# EXTEND THE CAPABILITY OF YOUR PC

## RTCS ADVANCED OPERATING SYSTEMS AND SOFTWARE DEVELOPMENT TOOLS CAN TAKE YOUR PC TO THE LIMITS OF YOUR IMAGINATION

### RTCS/UOI - UNIVERSAL DEVELOPMENT INTERFACE

- Runs Intel Series III software on a PC, XT or any MS-DOS computer
  - PC / Series III file transfer software included
  - 100% software compatible with Series III
  - PCSBC - Upload, download & debug target system (Option)
  - UOEBUG - Onboard debugging tool (Option)
  - Over 800 licensed RTCS/UOI's in use
- PRICE \$300

### PC/IRMX - REAL-TIME MULTIUSER MULTITASKING OPERATING SYSTEM FOR IBM PC

- More versatile than Intel's System 86/330
  - Intel Utilities, Edit, Link, Locate, Librarian & ASM included
  - Intel Pascal 86, Fortran 86, PL/M 86 and C 86 Languages optional
  - Ethernet, GPIB & Hard Disk options
  - Available for COMPAQ, TI Professional and DEC Rainbow
- PRICE \$2,250

### FORCON - BRING DOWN MAIN FRAME FORTRAN PROGRAMS TO RUN ON THE PC

- Pascal, PL/M, Fortran 77/86 and C compatible compilers
  - Superior object code optimization and in-line 8087 code
  - Support large arrays (over 64K)
  - Overlay loading
  - Object modules run on IBM PC and XT
  - Special large program utilities option
  - Available for COMPAQ, TI Professional and DEC Rainbow
- PRICE \$4,850

### SOFT SCOPE - HIGH LEVEL SOFTWARE DEBUGGER

- Source code interface
  - High level Traces, Single Step and Breakpoints
  - Access to Symbols and Line Numbers
  - Machine disassembly and Floating Point support
  - Goes beyond Intel's Pscope

## MAILMERGE

Not only does *MailMerge* let you turn off print-time formatting, but it lets you then imbed your own commands for printing out. This little-known feature creates tremendous possibilities. For one thing, it means that you can finally work on a document in one format and then print it out in an entirely different format without changing your edit file! The manual for version 3.3 does mention this, but some of the dot commands you can use to control your output were omitted from it. The old manual goes into much more detail, but it is harder to read.

This means it's possible to work on a document with justification off and print it out justified. Simply enter the dot command `.pf` on followed by `.oj` on. Print out under the M option and you've got yourself instantly justified text without having to go through and reformat. It's a good

Figure 5: You can create a command file before you print, instead of entering the commands as you work.

habit to work with justification off. For one thing, if you are searching for a two-word string ("QA in *WordStar*), *WordStar*

will not be able to find the string if the justification process has inserted two spaces between the words. For another, if

## FILE TRANSFER PROGRAMS

TRS ———> IBM  
APPLE ———> IBM  
CP/M ———> IBM

You really CAN use your VISICALC files on the IBM and compatibles. In fact your Visicalc files once transferred with our package can be used on the IBM under VISICALC, MULTIPLAN or 1-2-3! You can also transfer programs and data to the IBM.

- No more retyping or wasted time
- Fast transfers - 110-9500 baud
- Send files of any length
- Transfer ASCII files, random files, text files, data files, binary files, high level language programs (Basic, Pascal, Fortran, Cobol, etc.), electronic spread sheet data, word processor files, etc., it all gets transferred!

### MODELS SUPPORTED:

TRS Model I, II, III, 4, 12, 16, 100 (or compatible machine) APPLE II, II+, IIe, III (or compatible machine) IBM PC, XT, PC Jr. (or compatible machine) PC DOS 1.1, 2.00, 2.10 Machines running CP/M

### ALSO:

LHW, FRANKLIN, BASS, CORONA COLUMBIA, EAGLE, COMPAQ - call for others

The File Transfer Program comes complete with all instructions, hardware and software.

## MAILMERGE

It's possible to work on a document with justification off and print it out justified.

you will be having your printout typeset, the typesetter will not want all the extra spaces that justification creates.

I was ecstatic when I discovered that *MailMerge* can print double-spaced copy easily. The 3.3 manual does not mention that you can turn print-time formatting on (.pf on) and then set the line spacing for your printouts (.ls 2). Editors and writers,

rejoice! No writer likes to work with double spacing; it takes up precious screen display and makes editing more difficult. And no editor likes to work with single-spaced hard copy; it's hard to mark on. *MailMerge* makes everyone happy. Simply insert these commands at the beginning of your document:

```
.pf on
.ls 2
```

and when you print out it will give you the same results as using \*OS 2 in *WordStar*. *MailMerge* will reform paragraphs containing soft carriage returns, but it will not double-space lines ending in a hard carriage return (indicated by the flag "<" in the rightmost column of your *WordStar*

## Changing The Dot Command Dot

The useful dot command can be inhibiting, especially if you like to use ellipses. Here's how to get around it.

Both *MailMerge* and *WordStar* make extensive use of dot commands, which consist of a period in column 1 of the *WordStar* screen, followed by a two-letter code. These little dot commands are powerful, and they can greatly alter the appearance of your document.

When *WordStar* finds a dot in column 1, it does not print out that line or send a line feed to the printer. It looks for the two-letter command to tell it what to do next. This means that you can never have a period in column 1 and expect that line to print. No ellipses are allowed at the beginning of the line, and if you want to write about dot commands themselves, it gets tricky.

It's easy to change the symbol that *WordStar* considers the beginning of a dot command from a period to some other, less frequently used symbol. *WordStar* can easily be patched to read a symbol like the exclamation point (!) as the start of a dot command.

First, make a copy of your current *WordStar* disk, including the file De-

bug.COM from your DOS disk. Type:

```
DEBUG WS.COM <Return>
F 395 L1 21 <Return>
W <Return>
```

The screen says "Writing 5380 Bytes" (or 5000, if on DOS 1.1 with *WordStar* 3.0) When you get the Debug prompt "--", enter:

```
Q <Return>
```

What just happened? In the line above beginning with F, you told Debug to Fill location 395 in the *WordStar* program with a byte value with a Length of 1. The value to be put in is 21, the hexadecimal value of the exclamation point. So you're telling *WordStar* and *MailMerge* to look for !'s to signal the beginning of dot commands. The ! still has to be entered in column 1 when you're editing.

You can choose any symbol you like, but you should have a hexadecimal table handy to be sure you're entering the hex value of the symbol, not the symbol itself.

—D.B. and S.V.

## MAILMERGE

screen). Most BASIC programs, for example, will not be double-spaced since most of the lines end in hard carriage returns.

There's yet another feature that makes

No writer likes to work with double spacing and no editor likes to work with single-spaced hard copy.

*MailMerge* an inseparable *WordStar* extension. When I'm working on a document of any length, I like to make each chapter or section a separate file. *WordStar*'s no speed demon, and I find ten pages or so about all I have the patience to work on at one time, especially since markers can't be saved. How then, do I print out all these separate files? It's simple if you use *MailMerge*. The command .fi tells *MailMerge* to insert a file. By ending each chapter with a page break (.pa) and following it with a command to print out the next chapter (.fi chapter 2) I can have my text printed out in order, with the pages numbered sequentially. No more page numbering (.pn) commands. *MailMerge* does all the work. Instead of entering these commands at the end of each chapter as I go, I can create a command file at the end to do all my printing, "ask variables," and line spacing. My command file would look like Figure 5.

Dot commands make *MailMerge* an uncomplicated workhorse. Use it to manipulate your mailing lists. Send out form letters by the thousands with it. But also use it to get your money's worth out of *WordStar*.

*Diane Burns and S. Venit are the authors of The SuperCalc Primer and are working on two more books. They teach classes in WordStar for ComputerLand stores in the San Francisco Bay area.*

A person wearing a hat and outdoor gear is sitting on the forest floor, working on a portable computer system. The system includes a monitor, a keyboard, and a floppy disk drive. The person is surrounded by tall, slender trees and dense foliage, with sunlight filtering through the canopy.

## ALL YOU REALLY NEED . . . Practical UCSD Pascal from NCI

Now, for a very friendly price, you can write your own UCSD Pascal software on the IBM PC. NCI's Practical Pascal Package makes it simple to program in UCSD Pascal, the natural choice of professional software developers worldwide, even in the most remote locations.

The Practical Pascal Package combines a superior Pascal compiler with the easiest, fastest and most reliable p-System on the market for the IBM PC and compatibles. This package lets you compile without changing

floppy disks. You also get a full screen editor, a file manager, graphics capability, RAMdisk support and a guide which explains in clear, down-to-earth language how to use the p-System.

This is a system you can grow with. All the tools to meet your new programming requirements are available from NCI. In addition to the IBM PC, the NCI Practical Pascal Package is compatible with Corona, Columbia, Eagle, Compaq and Hyperion.

For all you need to program in UCSD Pascal or for dealership information call or write:

# Software Family Dynamics

What happens when you marry into a software family? A look at the capabilities of several integrated programs shows there are both advantages and drawbacks to consider.

**T**he microcomputer industry has never been static. Technical developments and software trends constantly chase each other in an upward spiral that grows tighter as competition increases. Larger memory has created a competitive push to integrate individual

software programs into families sharing common commands, special function keys, and file structures. These integrated families may appear to be one program with many functions, several programs called from a common menu, or separate programs with shared attributes. No matter what their specific structure, software families are intended to reduce training time and improve the effectiveness of the individual users.

## History of Families

If you apply a broad definition, *WordStar* was one of the earliest family packages for microcomputers. It integrated editing, formatting, and printing modules that some word processors still treat as separate pieces. *WordStar* allows you to call these functions from a menu and to do simultaneous printing and editing.

*T/Maker II* was a second early family system. This 8-bit CP/M program brought together word processing, spreadsheet analysis, and database functions into one well-integrated package. Its successor, *T/Maker III*, adds some graphics generation to the list of family talents.

*T/Maker III* is specially designed to provide excellent file-integration capabilities. You can create lengthy documents with the word processor and include large tables computed with the spreadsheet as well as various lists and reports generated by the database management system (DBMS). This integration is automatic, and the work appears on the screen and in print as one continuous document. *T/Maker III* has been criticized because it is a command-driven package that doesn't provide much help for the user; you have to know the commands or you won't get

## *pfs:software*

Software Publishing Corporation  
1901 Landings Dr.  
Mountain View, CA 94043  
(415) 962-8910

**List Price:** *pfs:write*, \$140; *pfs:file*, \$140;  
*pfs:report*, \$125; *pfs:graph*, \$140

**Requires:** 128K, one disk drive (two disk drives preferred). DOS 1.1 and 2.0 are supported. For *pfs:write* and *pfs:graph*—color monitor and color/graphics board recommended.

# Powerbase for the powerhouse

At last: a completely new relational data base management system that fully utilizes and enhances the power of the best micro on the market today. And makes it available to those whose expertise is business, not computers.

We call it POWERBASE™ Software clever enough to meet your information needs, easy enough to be mastered in half an hour. No fancy programming. No unnecessary computer jargon. You simply point your screens and define the information you need. PowerBase does the rest. Pleasurably.

PowerBase introduces DATAZOOM™ and the exclusive Zoom Key which, at the touch of your fingertip, explodes data to deeper and deeper levels of revealing detail. Other features include ultra-fast b-tree access, multiple files, powerful editing and table look-up functions, flexible report writer, the ability to search, sort, and scan other files... and many more.

Master data without having to master computers. The power of the micro is now fully yours with PowerBase, the new breed of software that makes data management basically simple.

## FAMILY DYNAMICS

anything done. But the integration of functions and files in this program is excellent. (*T/Maker III* was reviewed in the article "T/Maker III Brews Up Text and Tables," *PC Magazine*, Volume 2 Number 2.)

The software integration movement really got rolling in the fall of 1982 when Lotus Development Corporation demonstrated *1-2-3*, and VisiCorp previewed *VisiON* at the COMDEX show in Las Vegas. The rest of the software industry took note of the crowds at these booths and decided that integration of some type was what the public wanted.

Context Management Systems had been in the market with *MBA*, but this integrated family didn't meet with the same success as *1-2-3*. It requires more memory, works more slowly, and has developed a reputation for being more difficult to use. The latest version of *MBA* adds telecommunications to the spreadsheet, graphics, and DBMS functions, so this family may take the prize for having the most capabilities under one family name.

*VisiON* is offered as an integrating scheme that will tie together the VisiCorp family including *VisiCalc*, *VisiWord*, *VisiPlot*, *VisiTrend*, and other packages. The software makes extensive use of graphic displays to call and apply the functions from the individual programs (a technique called "window management"). It puts a thick layer of buffering and interpretation between the user and the application packages.

Clearly, family integration on some level is an important factor in modern software development. Let's look at one family tree, *pfs:software*, to see if there is room where the branches attach to the trunk for desirable special applications software to perch.

The *pfs:software* family consists of four major packages: write, file, report, and graph. One strength of the family comes from the fact that the software currently runs not only on the IBM PC, Compaq, and other PC work-alikes, but also

that it runs on Apple and Texas Instruments personal computers. This means that a business or professional organization can have several different types of machines and that workers can move between them without having to re-learn commands, special keystrokes, or other operating procedures.

### The software integration movement really got rolling in the fall of 1982.

The write, file, and graph members of the *pfs:software* family can function independently. Report is designed to be used with the file program. Since the family shares a common command structure, let's first see how you put the programs to work.

#### Family Traits

You always can tell *pfs* users from people trained on other software. A *pfs* user thinks the Enter (Return) key is just like any other without any special command properties. The important key in *pfs* software, the key that commands all of the functions, is F10. That special function key under your left little finger gets heavy use in *pfs*. If you aren't familiar with *pfs* software, you can spend a lot of time punching Return and waiting for something to happen. If you know the software, you wonder why anyone would ever use any other key to make things happen.

These programs are all menu-driven. In some cases (particularly with *pfs:graph*) you have to work through several menus before you can finally see the finished product. The *pfs* command menus are as similar as the different program functions will allow. You move through the menus with the tab key and push F10 to go when you have made your choice. The arrow keys and paging keys work as they should

and the backspace key is destructive. The Delete key causes the cursor to delete the character above it, not the one to the left as is the case with some programs. Repeated use of the delete function will pull characters in from the right and cause the cursor to gobble them up. You can pull characters from following lines and move them up with the delete function.

Each program package has a similar setup utility that configures it for the printer and video system in use. The installation utilities are not identical, and each package must be initially installed for each individual machine.

All *pfs* software is copy-protected, but the programs come with a special utility allowing them to be copied to a hard disk five times. The utility checks to see that the receiving disk has at least 2 megabytes of storage room before doing its job. This seems like a reasonable way to meet the manufacturer's perceived need for copy-protection and the hard disk users' real need to move the software over to a large mass-storage device.

The software runs fine under either DOS 1.1 or 2.0, but there isn't enough room on the disks to write the large DOS 2.0 COMMAND.COM file. This means you either have to install the software on a hard disk or boot DOS from a second disk if you want to use Version 2.0 with the *pfs* family.

*Pfs* software is remarkably resistant to crashes. I tried writing to full disks, leaving disk drive doors open, and telling the programs to do all sorts of impossible tasks. They always responded with polite and clear error messages and never crashed or hung up.

#### File Format

The files created by *pfs:software* are stored in a unique format. The format is common to the *pfs:software* programs and is credited by the manuals with providing fast access to the data. The programs can read standard ASCII files and files created by *WordStar*, *VisiCalc*, and other software, but the reverse is not true. *WordStar*

## FAMILY DYNAMICS

becomes very puzzled if it tries to read an original *pfs:write* text file. Spelling checkers go berserk. Similarly, most data communications programs either will quit early or go on forever if you try to send a file created by *pfs:software*. This is one of the main drawbacks to joining this kind of family group. The family is always ready to read mail coming in, but they want to keep family matters to themselves.

The method of obtaining a standard ASCII version of a *pfs:software* file for data transmission or editing by other software is simple, but it requires a few moments of time and some extra steps. The *pfs:software* print modules ask you if you would like to direct the output to a printer or to a disk file. If you select the disk file option, you get a formatted ASCII file ready for transmission or access. This works well if the ASCII file is

### Numbers—even numbers presented in neat rows—have limitations.

a finished product, but translation to ASCII can be a cumbersome way to link *pfs:software* and non-*pfs:software* programs that are interactive.

#### Reading the Tree Rings

Each member of the *pfs:software* family has documentation that is very similar in form and style. The manuals are printed on glossy paper, have many illustrations, include "Getting Started" and "What is . . . ?" sections, and use clear functional descriptions. Each has a complete table of contents, index, and glossary. The manu-

als also include a list of error messages and their possible causes. The documentation is first-rate, and the high quality is maintained across the family.

Now that we have seen some of the general family traits, let's see how individual members of the family measure up.

#### Pfs:write

*Pfs:write* is a good word processor that can meet most needs. I would rank it with *VolksWriter* in ease of use. It has all of the standard functions, including block movements and editing, search and replace, insertion, and centering. The special function keys are well integrated and give you fast movements to the start or end of a line, word and line deletion, underlining, bold-face print, and block functions. No control keys are used. The F1 key will call graphically designed Help screens that describe

### DataMate 2.0

- A truly all-purpose DATABASE MANAGER
- Exceptionally easy to use manual
- Menu driven commands (Add-Delete Edit-List-Print-Sort-Search-Help)
- "User Defined Option" to customize your application
- Total package includes manual, a master diskette and sample data disk

Send for a DataMate 2.0 demo diskette to see for yourself the many applications and benefits. Once you've seen the program, you'll be convinced that you get more performance and flexibility with DataMate 2.0.

**PLUS**, you'll be receiving DataMate 2.0 demo on a quality DSDD diskette, one you can count on day after day.

Available on IBM-PC, Columbia, DEC Rainbow, TI Professional, Epson and other 16-bit computers.

## FAMILY DYNAMICS

the functions in use and menu alternatives.

The limitations of the program are few, but they might impact on its use for some professional and office applications. *Pfs:write* cannot display anything but single-spaced text, so what you see on the screen is not what you will see on paper if you are preparing manuscripts or other double-spaced material. It will not allow you to prepare a document with a right margin beyond 80 columns. It will insert a "slug line" or header at the top of each page and put a footer at the bottom, but you get these additions on every page, including page one! The program provides no hyphenation capability, but whole words are wrapped to the next line and the text is automatically adjusted. Right justification is not provided. Finally, the package is RAM limited. It can handle only

about 13 pages of single-spaced text. You can use a Join command to bring files together during printing, but this still leaves the editing of the entire document a cumbersome chore.

The program can make good use of a color/graphics board and color monitor display. The screen display includes a ruler line and two status lines that show the line and page number (correct only if you are single spacing), status of the insert mode, the amount of RAM used, and other factors. On a color monitor, the text comes up with white characters on a blue background. The colors cannot be changed, but underlined and boldface print are shown in reverse color combinations.

By itself, *pfs:write* is an excellent letter-writing tool, and, as we shall see, it has good capabilities for preparing mass mail-

ings. But it would be limited in some applications where specialized and "non-letter" text is being prepared.

### Pfs:file

Think of *pfs:file* as an automated filing cabinet. You can use the program to create a form and then file as many copies of that form in the cabinet as your disk file will hold. An otherwise empty DOS 1.1 disk will hold about 2,200 forms. The one limitation is that each drawer of the filing cabinet (each disk file) must have only one type of form in it. A form can have several parts and you don't have to fill in all of the blanks on any one form, but you can use only one type of form per file.

At any time after you have designed the form and made the first few entries, you can retrieve selected completed forms

(continued)

# BASIC+SOFTPLOT = GRAPHICS fast and easy.

Expand your horizons in graphics with SOFTPLOT.

CIRCLE 258 ON READER SERVICE CARD

Great graphics on your PC is easier than you think. If you have the right software tools to use, SOFTPLOT/BGL gives you the capabilities to do graphics for fun, for scientific applications, and to develop graphics application programs.

It provides a unique library of powerful graphics subroutines that shortcut the process of program development. High-level commands make quick work of creating programs capable of 2D and 3D imaging, windowing, 3D rotation and other graphics features.

SOFTPLOT/BGL is easy to learn. It's written in BASIC and can be used within your BASIC program. It can run in interpreted mode or compiled. It is specially designed to occupy little memory space providing programmers with comfortable free memory to build their programs.

SOFTPLOT is device-independent and comes with drivers for screens and many printers and plotters. You don't even have to learn how your plotter works. SOFTPLOT/BGL does it for you. It even has an EMU/PLOT program that prints graphics pictures on printers in the absence of graphics screens. SOFTPLOT/BGL is your answer for graphics.

SOFTPLOT/BGL runs under CP/M and MS-DOS, it supports IBM-PC, Z-100, TI professional and other popular microcomputers.

# Instant one-button color printing.

Press here.

It's just that easy! Any time you want to print what's on your Apple's screen just hit the copy button on your Transtar 315 color printer with our PICS card installed, and it's done! No special programming, no lengthy code sequences, no need to exit your program! Just press the button and it prints!

By adding the optional PICS card to your \$599 Transtar 315 color printer, you've opened up a whole new world of easy color printing. For the first time ever, our PICS parallel interface card enables you to screendump virtually any program - graphics, charts, games - even copy-protected software! Specially designed only for the Apple II, II+, IIe, and Franklin computers, the Transtar 315 PICS card does the work of a parallel card and a lot more and costs only \$119.95.

At the push of a button, Transtar's innovative new 4-color diagonal ribbon will print up to 7 colors and more than 30 shades in a single pass.

The 315 is precision-built to exacting standards by Seikosha, the most experienced company of the famous Seiko group - recognized worldwide for quality and dependability. In fact, one of the nicest things about Transtar's 6-month warranty on parts and labor is that you'll probably never use it!

Innovative, inexpensive, dependable, easy: the Transtar 315. Color printing has never looked so good!

## Only \$599.

\*PICS cards are currently available for Apples and Franklins.  
PICS cards for other computers will be available in the future.

# NOW YOU CAN WORK IN C WITH ONLY BASIC KNOWLEDGE

## Enjoy the Best of Both Worlds with BASIC\_C™!

Until now, IBM BASIC and UNIX C were about as far apart as apples and oranges — and if you wanted to move from BASIC to C, you had to go back to square one. Not anymore!

**You already know what C can do for you:** structured programming, tight code, very portable software. But why should you have to give up BASIC's friendly set of powerful functions? With BASIC\_C, you don't!

**BASIC\_C is a software development system:** it has a full screen editor, a C compiler, and a library of functions that works like the BASIC that comes with every IBM PC.

**You'll soon be feeling right at home:** since you can still use most of your knowledge of BASIC, you'll be writing useful programs in C very quickly. Your new C programs will even read and write standard BASIC files. Imagine...No data conversion hassles!

Learning a new language is never painless but BASIC\_C's documentation assumes familiarity with BASIC, not C. It walks you through a point-by-point comparison of the languages. The better you know BASIC, the easier it will be.

For more information about the attractively priced BASIC\_C software development package, **please call our toll-free number.**

### OR MAIL IN COUPON FOR MORE INFORMATION

## FAMILY DYNAMICS

from the file. Selective sorts can be made based on one or several data items in the forms and on logical arguments, such as more than, less than, or equal to. The selected forms can be viewed, updated or printed.

The most common example for the use of this kind of program is a set of personnel data files. Each form in this file could hold such data as the name, social security number, employee number, birthdate, employment date, department number, and monthly salary for each employee. The blank form could be designed so that the program checks the data as it is entered for logic. This means, for instance, that the name section would allow only the entry of alphabetic characters and the salary block would not allow the entry of numbers exceeding a specific range. This kind of editing can eliminate gross errors from getting into the database; it represents one of the advantages of an automated system.

Other advantages of automated filing include the ability to withdraw forms quickly, and, most significantly, when forms are "withdrawn" for use, they aren't really gone! Office workers don't have to chase pieces of paper from desk to desk when they have been removed from the cabinet. The forms can be retrieved by different workers as they are needed.

Retrieval is as simple as entry. A blank form is called to the screen and the desired data entered into the necessary blocks. The program then searches through the file to find all of the existing forms with data elements matching those on the key form. If you want to find all employees in Department 51 making more than \$1,000 a month, you simply would select the search function, call a blank form, enter 51 in the department block, and enter >1000 in the salary block. The program would then search for and retrieve all forms meeting those conditions. You can page through the forms and change or print individual forms very quickly.

The ease of use and performance of

# dBASE II makes it possible. dPROGRAMMER makes it easy.

dPROGRAMMER is an accounting package and application generator that takes the "programming" out of using dBASE II.

The advent of dBASE II was a quantum step in computer information management. But to fully appreciate its power can take months of study. Now dPROGRAMMER takes the "programming" out of creating your own application and turns your computer into the management tool you hoped it would be when you bought it.

#### **dPROGRAM your accounting.**

dPROGRAMMER comes with a complete accounting package written in dBASE II. Now you can quickly and easily manage your General Ledger, Accounts Receivable and Accounts Payable. Included are the standard reports of balance sheet and income statement, a detailed general ledger, customer and vendor ledgers, and 5 journal registers, as well as many other helpful internal reports. dPROGRAMMER lets you handle sophisticated double entry accounting with simplicity and flexibility unmatched in the industry.

#### **dPROGRAM your business application.**

dPROGRAMMER adapts dBASE II to *your* way of doing business. It's quick and easy to use because you organize the access to information by setting up your own menus, programs and files. It's all in plain English with enough depth for both novice and expert. Anyone in your office will be able to organize information so it can be ordered, changed, retrieved and printed to suit every circumstance. dPROGRAMMER does many complex dBASE II functions automatically for you. From mailing lists through complex reports, dPROGRAMMER will manage your data so you're free to manage your business.

#### **Source code provided.**

Whether you have extensive dBASE II programming experience or are just learning this exciting language, you'll appreciate having the dPROGRAMMER source code. Not only does this make customization a very real possibility, but also provides examples of extremely well-written dBASE II programs.

#### **dPROGRAMMER is the dBASE II bargain of the year.**

dPROGRAMMER is the only dBASE II add-on product you will ever have to buy. It's a comprehensive business tool for dBASE II users that comes with everything you need to get the most out of your computer. Right away. What's all that worth? dPROGRAMMER costs just \$295, much less than you'd expect to pay for the accounting source code alone! dPROGRAMMER is the sensible solution for all your information management needs.

dPROGRAMMER runs on any computer that will support dBASE II (8 or 16 bit). For more information, contact Sensible Designs at 5244 Edgepark Way, San Diego, CA 92124.

"A great team"

## FAMILY DYNAMICS

*pfs:file* are both impressive. Form design is the most critical portion of the program, but the screen display makes the process simple if all of the data is available. The form design can be modified, but this process takes careful planning. You can easily add new categories where no data presently exists, but if you eliminate a category or truncate the space for an entry, the program will issue an error statement and refuse to accept the new form. Data entry and retrieval both are simple functions that can be performed by persons with very little training.

The ease of use and performance of *pfs:file* are both impressive.

The *pfs:file* program is a valuable record-keeping tool. It functions quickly and efficiently. But, like a filing cabinet, you can retrieve only the same forms you put in. The computer will not rearrange the data to give you summaries or different presentations of the data it contains. Those functions are performed by two other programs: *pfs:report* and *pfs:graph*.

### Pfs:report

The *pfs:report* program is designed to be used only with *pfs:file*. It makes use of the form designed for *pfs:file* and uses that form to retrieve information. When it retrieves the information, it can present it or print it out by category instead of by form. Summaries of categories can be developed, and mathematical functions can be performed on the summaries.

In our example of personnel files, we could use *pfs:report* to prepare a listing of the names and salaries of all persons in Department 51 earning more than \$1,000 a month. We could instruct the program to sum the salaries and then to divide the sum by the number of employees selected to determine a numeric average. This report would be printed in a format we design

# TOTAL CONTROL: PC/FORTH™

Compiles with the New 83-Standard  
GRAPHICS • GAMES • COMMUNICATIONS • ROBOTICS  
DATA ACQUISITION • PROCESS CONTROL

- **PC/FORTH™**: interactive and conversational, but 20 times faster than BASIC.

# THE 8087 IS IN STOCK!

MicroWare is the world's leading retailer of 8087s. We also have the most accurate statistics on chip reliability. They are: .01% infant mortality, .00% adult mortality, and .02% 8088 incompatibility. As for ease of installation, we have never had a customer return a chip because of bent pins. We are so confident that you will be able to successfully install and use the chip that we offer a 180-day warranty with every chip we

sell. That's 90 days more than anyone else! To support the 8087 we stock the largest selection of 8087 software anywhere. This includes: three FORTRANs, three PASCALS, APL, Intel's ASM86 (the assembler used by IBM to design the PC), PL/M-86, several Cs, 87BASIC, 87MACRO and MATRIXPAK for very large matrices. If you have a real time or multi-user application, then you ought to consider RTOS\*. It is

our implementation of Intel's Real Time, Multi-tasking Executive (iRMX). If you have a question about which language, compiler, operating system or application package is best suited to your problem, we can answer it. Just call:  
Information and Orders—  
617-746-7341  
University, Corporate and Government Buyers—  
617-746-7364

## 8087 Support from MicroWare

**87FORTRAN/RTOS\*** is a MicroWare adaptation of the Intel Fortran-86 compiler, a full ANSI-77 subset with 8087 extensions and overlays. It generates in line 8087 code allowing use of all 8087 data types, including 80 bit reals and 64 bit integers. The complete subset I/O is supported including Internal and External Files and List Directed I/O. 87FORTRAN/RTOS uses the Intel large memory model, allowing data/code structures which utilize the full megabyte. The compiler provides direct access to 8088 ports and supports logical operations on 8 and 16 bit operands normally treated in assembly language. It is ideal for large applications which are number intensive or control hardware.

**87PASCAL/RTOS\*** is Intel's ISO-Standard Pascal with 8087-8088 exceptions. These make it possible to use all the 8087 data types directly, while generating modules in one of the three Intel Memory Models.

**87FORTRAN/RTOS** and

**87PASCAL/RTOS** include RTOS and support for one year each \$1350

**PC TECH JOURNAL REVIEW:**  
"The MicroWare package is preferable... it executes the basic operations more rapidly and MicroWare provides a free update service."

**87BASIC\*** includes patches to the IBM Basic Compiler and both runtime libraries for USER TRANSPARENT and COMPLETE 8087 support. Provides super fast performance for all numeric operations including trigonometrics, transcendental, addition, subtraction, multiplication, and division. \$150

**87MACRO\*** - our complete 8087 software development package. It contains a "Pre-processor" which converts 8087 instructions into 8088 escape codes, source code for a set of 8087 macros, and an object library of 8087 functions which include transcendental, trigonometrics, hyperbolics, encoding, decoding and conversions. \$150

**PLM-86** with RTOS \$1100

### MICROWARE BEST SELLERS!

**8087-3 CHIP** in stock with 180 day warranty and 8088 exchange \$199

**FASTPAK\*+8087** includes one runtime library (87BASIC or 87MACRO), the 8087 chip, the 87/88GUIDE, and installation instructions. \$375

**MATRIXPAK\*** manages a MEGABYTE! Written in assembly language, our runtime package accurately manipulates large matrices at very fast speeds. Includes matrix inversion and the solution of simultaneous linear equations. Callable from MS Fortran 3.13, MS Pascal 3.13, 85S Fortran, and MicroWare 87MACRO, 87BASIC, and RTOS compilers. each \$150

**87/88GUIDE** - an excellent tutorial on writing 8087 code and interfacing it with compilers. Full of code that runs! \$30

**MICROSOFT FORTRAN 3.13**

**MICROSOFT PASCAL 3.13** These new IEEE compatible compilers support both double precision and the 8087 each \$229

**MICROSOFT C COMPILER** includes Lattice C and the MS L-bran \$399

## FAMILY DYNAMICS

with specific headings, columns, and rows. The format can be saved and the report can be regenerated as frequently as needed.

*Pfs:report* is slightly more complex to use than *pfs:file* because of the format design process. The data-retrieval process is simple. But you have to design the output format to fit both the size of the data elements and the screen or printer you use as an output device. You also have to develop and enter any formulas you want to use to manipulate the data. However, this has to be done only once for each report.

When you add *pfs:report* to *pfs:file*, the combined program has most of the attributes of a complete relational database management system. The combined system lacks some of the built-in math functions found in other programs, but it does include strong built-in formatting functions, such as decimal-point alignment of numbers, counting entries in a column, giving subtotals, and accounting for page breaks when printing reports.

However, numbers—even numbers presented in neat rows—have limitations. Often a chart or graph can demonstrate a relationship between the numbers that isn't clear in a printed report. If you are a member of the *pfs* family and you want to see a graphic illustration of some numbers, you call *pfs:graph*.

### Pfs:graph

The *pfs:graph* program can be used in the standalone mode. As is typical of the family, it can read files, such as DIF files prepared by *VisiCalc* and other spreadsheet and DBMS programs. It also can accept data inputs from the keyboard.

*Pfs:graph* can produce line, bar, and pie charts. The bar charts can be of the stacked variety that illustrate a great deal of data. The charts can be displayed in color if the PC is equipped with a color/graphics adapter. A good selection of printers can be used, including the IBM graphics printer, Epson MX-70, MX-80 and MX-100 with *Graftrax*, IDS Prism

(not color), and the Okidata 80 series with the graphic ROM. It will plot charts with the Houston Instrument HiPlot, Hewlett-Packard 7470A, 7220, and 7225, Strobe 100, and Sweet-P plotters.

An extensive menu is used to design each chart. The menu allows you to enter the titles and labels you want on each graph, select the X and Y axes, and use other features, such as color and grid divisions. It is relatively simple to switch between the configuration menu and the chart to see what effect your changes make on the final drawing.

If you use *pfs:graph* to draw information from a data file created by *pfs:file*, you are again greeted by the form used to store the data. *Pfs:graph* can perform some analysis of the data it retrieves through the use of the forms. It can select very specific items from a data field, such as reading only the days from the date field. It also can sum data contained in a specific field on many charts and display the totals graphically. You might, for example, want to see the sales figures for the first half of the month compared to the figures for the second half. The program could read the dates and sum the appropriate item for each date in the correct category. In this way, *pfs:plot* duplicates some of the capabilities of *pfs:report*.

If your need for data manipulation exceeds the power of *pfs:graph*, you will have to use *pfs:report* and either enter the data manually or create a new form in a new file containing the derived data.

This member of the *pfs:software* family is a good program; it is relatively easy to use and it has interfaces for a number of different output devices. But the program lacks some features found in other modern graphics software. It does not allow for different fonts to be used in the labels or titles of charts. It does not allow you to select the color or shading patterns used on the charts. These limitations are not critical, but again they might be a problem to a professional office desiring the ability to turn out really sharp charts using specific

(continued)

## The MMSFORTH System. Compare.

- The speed, compactness and extensibility of the MMSFORTH total software environment, optimized for the popular IBM PC and TRS-80 Models 1, 3 and 4.
- An integrated system of sophisticated application programs: word processing, database management, communications, general ledger and more, all with powerful capabilities, surprising speed and ease of use.
- With source code, for custom modifications by you or MMS.
- The famous MMS support, including detailed manuals and examples, telephone tips, additional programs and inexpensive program updates, User Groups worldwide, the MMSFORTH Newsletter, Forth-related books, workshops and professional consulting.

# mmsFORTH

### A World of Differencel

- Personal licensing for TRS-80: \$129.95 for MMSFORTH, or "3+4TH" User System with FORTHWRITE, DATAHANDLER and FORTHCOM for \$399.95.
- Personal licensing for IBM PC: \$249.95 for MMSFORTH, or enhanced "3+4TH" User System with FORTHWRITE, DATAHANDLER-PLUS and FORTHCOM for \$549.95.
- Corporate Site License Extensions from \$1,000.

if you recognize the difference and want to profit from it, ask us or your dealer about the world of MMSFORTH.

## FAMILY DYNAMICS

colors, shading, and print styles for emphasis.

### The Family Plays Together

The front-end benefits of using a software family (common training, documentation, keystrokes, and other operating features) don't represent all of the things that family life should bring. There should be some real synergism between the family members that increases their total value. The *pfs:software* family benefits from being able to call on each other in the middle of an active program. This means that as *pfs:write* is printing a document, it can call in names and addresses from *pfs:file*. The *pfs:graph* program can save a "picture" of a graph it creates in a file that can be read by *pfs:write*. This picture is a dot image of the final graph that is saved in the same format used by IBM BASIC's BSAVE command. The files generated by *pfs:report* can be called in, and a report can be used as a part of the printed text.

These abilities mean that *pfs:write* has the potential to produce complete documents that include graphics and some variable material drawn from a sequence of records. It has the ability to generate personalized form letters that might even include a different chart or graphic image for addressees who share some specific demographic feature, such as zip code or age group. It can be used to produce illustrated reports with data tables and charts that change according to specific characteristics described in the forms used by *pfs:file* and compiled with *pfs:report*.

The only slight drawback to this mixing of programs is the mechanical problem of leaving enough room on a page of text to bring in a graph, report, or form. Since *pfs:write* does not display the data it borrows from its family members, you have to plan ahead to allow for 18 blank lines in the document for a graph and the needed space for addresses or reports. If you want to include several borrowed entries in one long document the planning can be tedious. Some small line adjustments in the beginning of the document may

change the position of entries in the last pages.

### In a Family Way

Another advantage to family life comes from mutual support. A company that takes the time to put out a family of software would seem to be more likely to support it than a company that markets one program and then leaves it an orphan. Software Publishing Corporation has organized a *pfs* Users' Group, and it publishes a quarterly multi-page newsletter describing different applications. One small example of the support Software Publishing provides: I called with a technical question on the language used to write the original software (Pascal). The technical department was busy at the time, but they called me back (California to Virginia) and answered my question within 10 minutes. I had not identified myself and the company didn't know I was doing a *pfs* review.

### Locked In?

Finally, we come to the question of the transportability of data between family and nonfamily software packages. The *pfs:software* family seems to be able to use data prepared by other programs. It can read and use ASCII files, DIF file, and BSAVE picture files. But outside software may have problems reading the files created by a *pfs* program. This can raise problems if you want to link the output to other software on a regular basis. As an example, I might wish to use the output of *pfs:report* as the input to a tax-preparation program. If I want to do this once a year, it is no problem to "print" the report to disk as an ASCII file and run the tax program against it. But if I wanted to look at the tax position of various clients on a regular basis, I would want to find a different DBMS to prepare my reports.

Joining a family has advantages and drawbacks. You gain mutual support and familiarity; you lose some ability to pick and choose your friends. Will you go it alone or choose the family life? ■

# Add Color Printing To Your IBM-PC.

## \$599!

**C**harlie usually expresses himself in black and white, but now he agrees that life is much more fun in living color. You too can lead a more colorful existence with Axiom's GP700PC, the first color printer to be designed specifically for the IBM-PC.

**Compatibility** — The Axiom GP700PC comes with a cable that plugs right into your PC printer port. It's equipped with a VDI (Virtual Device Interface) driver, making it compatible with all new IBM and VisiCorp software — including VisiOn.

**Speed** — Other color printers are S L O W. Our GP700PC uses data compression to speed data transfer from your PC. It also has a separate print head for each color. All this adds up to the fastest full-color screen dump.

**One Printer Does It All** — The GP700PC is a full-fledged dot matrix impact printer with cartridge ribbon, friction and tractors, rear and bottom feed and multiple copy capability. You can use it as a high quality dot matrix printer when you don't need color.

Charlie's sold on color. At \$599 for our GP700PC, you'll be too!

# New! Three Winchester Internal Hard Disc Drive Systems!

Now you can choose from three low-power 10 Mega-byte systems that convert your IBM® PC to perform just like the PC XT!

Maynard Electronics introduces three Winchester Hard Disc Drive Systems — the only drive systems to offer you 10 Mega-bytes of formatted capacity with complete internal installation. These systems offer the user countless benefits and features: capability of booting off the hard disc; additional functions while requiring only one card slot in your PC; and, use of available power, thereby preventing overheating problems which have affected other drives. Handling heavyweight data was never easier.

All three systems are quality engineered and work with DOS 2.0 without any special software drivers and also run with other operating systems designed to make use of the XT hard drive system. All you need is the IBM® DOS 2.0 Manual and you're ready to run!

Each system is equipped with a low-power hard disc drive, complete software, cable, a SandStar™ Card and Hard Disc Controller Module. SandStar™ is the first family of modular peripherals created for the IBM® PC. Simple instructions for easy installation are included and all components are backed by an Unconditional One Year Parts and Labor Guarantee.

WS 1

This System is equipped with the SandStar™ Multi-Function Card in addition to the Hard Disc Controller Module. You can add up to three other SandStar™ Modules while using only one card slot. The following Modules are available: Serial Port, Parallel Port, Clock Calendar, Game Adapter, SASI Host Adapter and Prototyping Module.

WS 2

This System is equipped with the SandStar™ Floppy Drive Controller Card. The Card can control, in addition to the Hard Disc Drive, two floppy drives mounted inside your PC and optionally two additional 5 1/4" or 8" drives mounted externally. This solves three system slots for other expansion boards.

WS 3

This System is equipped with the SandStar™ Memory Card. In addition to controlling the Hard Disc Drive, the Memory Card allows you to add 64K bytes to 512K bytes of memory using only one card slot.

**NOW!  
Compatible  
with  
COMPAQ!™**

To expand your PC to perform like the PC XT, one of our Winchester Hard Disc Drive Systems is right for you. And if you have already made the wise decision to install any of Maynard's SandStar™ Cards, the SandStar™ Hard Disc Controller Module may be purchased separately.

**TO ORDER, CONTACT YOUR LOCAL DEALER OR DISTRIBUTOR.**

# Making Peace With 1984

For 35 years, we've lived within its shadow. Now the time of truth has arrived, bringing Orwellian overtones and one unavoidable question: Is Big Brother watching?

Welcome to 1984. If that sentiment doesn't give you a little chill, you're showing your youth. For many of us who grew up in the fifties and sixties, this New Year's Eve had an unsettling edge. For despite the parties and frivolity, in the back of our collective consciousness was an uneasy remembrance of George Orwell's dark, threatening novel of a utopia gone wrong. *1984*.

Orwell wrote, in 1949, of a fictional time when information was power, and power was everything. Big Brother watched all; Big Brother knew all; Big Brother's telescreens recorded all.

"The Party said that Oceania had never been in alliance with Eurasia. He, Winston Smith, knew that Oceania had been in alliance with Eurasia as short a time as four years ago. But where did that knowledge exist? Only in his own consciousness, which in any case must soon be annihilated. And if all others accepted the lie which the Party imposed—if all records told the same tale—then the lie passed into history and became truth. 'Who controls the past,' ran the Party slogan, 'controls the future; who controls the present controls the past.'"

All through my high school and college years, "1984" was perceived as a threat. We demanded free speech to keep Big Brother away; petitioned to ban the bomb to forestall the Ministry of Peace's "War

Corey Sandler

is Peace" campaign; and extolled the universities as ivory towers to give the lie to "Ignorance is Strength."

And there were times—no matter which side of the political fence you came down on—when it seemed as though the Cold War of the fifties, or the Cuban Missile Crisis of the early sixties, or the assassinations, war, protest, and turmoil of the late sixties were leading us right to the door of the Ministry of Love (whose purpose was hateful).

Nevertheless, I never really thought of our actual arrival in the year 1984. We could leap, with Arthur C. Clarke, to 2001 and a wonderful time of rebirth and renewal. We could journey to distant yet familiar galaxies with the starship Enterprise, or

frolic through funny phantasmagoric utopias created by Woody Allen. Somehow, we would avoid landing in that year between 1983 and 1985.

Well, folks, I guess we have arrived. But where are we?

## Back to the Book

Like many others, I reread Orwell's *1984* just recently, looking for the answer. I wanted to know if Big Brother had slipped into our midst, or if somehow—he had been repelled at the borders.

I mixed the book in among my other reading one week, picking it up and putting it down between passes at work in my electronic office, where I write books and articles on a telescreen that is linked into a common communications network, in a house where the climate, security, telephones, and cooking facilities are all removed from our concern by hidden microprocessors, and in an age that includes its share of Newspeak and Doublethink (our president calls a destructive new missile the "Peacekeeper"; the Soviet premier justifies the shooting down of a civilian airplane—it's not his fault and no big deal anyway; the newspapers report of "START" talks to end missile madness, based on a process of construction/reduction called "build-down").

Also in my mix of books that week was a recent best-seller, a superb piece of

## By Niklaus Wirth's standards, SBB Pascal is the best Pascal compiler for the IBM® Personal Computer.

In benchmarks using a suite of nine test programs written by Niklaus Wirth to objectively assess the capabilities of Pascal compilers, SBB Pascal outperformed its competitors in both speed and compactness of code.

The results of the Eratosthenes' sieve benchmark give just a hint of SBB Pascal's efficiency:

	SBB Pascal 11.10	MS-Pascal™ 11.70	Pascal/MT+86™ 14.70
Execution time (in seconds)			
Code size (in bytes)	203	229	294
.EXE file size (in bytes)	4608	27136	10752

Overall, our competitors' execution times averaged 1.58 times SBB's, their code sizes averaged 1.21 times SBB's, and their .EXE file sizes averaged 3.31 times SBB's.

Full benchmark results can be found in our new brochure, which also includes information on the features of the compiler and the accompanying editor and debugger.

## SANDLER'S SCREEN

reporting called *The Puzzle Palace* by James Bamford. The book is an unauthorized snoop at the National Security Agency, this country's huge, and almost totally unseen, secret intelligence organization. Under the guise of national security considerations, the NSA has taken full advantage of our world of electronic telecommunications to automatically and imperceptibly look into all of our affairs, Bamford writes. He continues:

"Thus, by having four strategically placed satellite antenna fields located near the COMSAT earth terminals and several average microwave receiving horns stuck on a rooftop or hanging on the side of an obscure tower near the various cable heads, the NSA should be able to monitor continuously nearly every international telephone conversation or message to or from anyone in the United States. Such a power could have been fantasized only by Orwell."

## Orwellian Questions

I found myself thinking about our world in 1984. Have you ever driven up a suburban street on a summer's evening and seen the flickering glow of television through every open parlor window? Have you noted how quickly a single phrase ("Excuse me!") can leap into our national consciousness overnight? Have you considered how our political candidates are now being chosen on the basis of their packaging and not their content? And the most Orwellian question of them all: What has the computer done to our privacy when there now exists the possibility (and occasional reality) of a computer network that links the desks of every bureaucrat, banker, policeman, journalist, spy, tax collector. . . .

And what about the *War Games* syndrome—the growing legion of computer hackers whose play from their homes or businesses involves searching for ways to break into government and corporate computer systems for fun and profit?

One of the ironies I noted while rereading 1984 was the absence of computers, at

# Everything You Ever Wanted From Personal Computing Faster Easier

## **SOLVING PROBLEMS vs READING MANUALS**

The real benefits of personal computing come from putting the hardware and software to work solving your business problems and not spending hours reading through boring and tedious operating manuals.

## **PERSONAL COMPUTER BECOMES PERSONAL TUTOR**

With Cdex Training programs you simply insert a Cdex diskette in your computer disk drive, turn on your computer, and in an instant your personal computer becomes your personal tutor.

### **TRAINING**

#### **FOR PERSONAL COMPREHENSIVE TRAINING PROGRAMS:**

- How to use your IBM® personal computer — Each Cdex program contains at least three disks and many contain four disks. That's because Cdex Training programs are graphical, interactive, and comprehensive. They not only tell you how hardware and software work, but they allow you to operate it through simulations with PC DOS — PC or XT — and hands-on exercises with the actual hardware and software.

- How to use your IBM® personal computer with CPM86 or Concurrent CPM86 — PC or XT

- IBM® PC communications using the IBM® PC Asynchronous Communications Program
- IBM® PC DOS 2.0
- How to use your Apple® IIe personal computer

#### **REFERENCE GUIDE INCLUDED**

In addition, each Cdex program comes with a Reference Guide that contains keyboard and/or command references for the pertinent hardware or software so that you can use it later to refresh your memory.

#### **COMPETITIVELY PRICED**

Surprisingly, given the above comprehensiveness of design and content, Cdex Training Programs are priced competitively with other computer-based training products that claim to provide training but only provide an introduction to training.

#### **USABLE TODAY AND TOMORROW**

With Cdex Training Programs you can use them today to train yourself on those features you need today and use them tomorrow to train yourself on the advanced features you need to implement sophisticated applications.

You get everything you ever wanted from personal computing. Faster and easier.

Cdex Training Programs are available for the IBM® PC or XT and IBM compatible personal computers, and the Apple II® Plus, Apple IIe and Apple III personal computers. See how effective a Cdex Training Program can be. Ask your computer dealer for a demonstration or call

#### **TRAINING FOR BUSINESS PRODUCTIVITY USING PERSONAL COMPUTER SOFTWARE:**

- "Managing Your Business Using Electronic Spreadsheets"
  - "Making Business Decisions Using Electronic Spreadsheets"
- These programs are for users of the Lotus™ 1-2-3 Program, MULTIPLAN™ Program, VisiCalc®, VisiCalc IV® or VisiCalc® Advanced Version Programs, or SuperCalc™ or SuperCalc2™ Programs.

## SANDLER'S SCREEN

least as we know them today in George Orwell's writing. In the world of 1984, the Party members were the machines, performing machinelike tasks in the process of "correcting" history to make it consistent with the present. (There was a serio-comic passage about that ultimate word processor that we writers always dream of: "He did not know her name, but he knew that she worked in the Fiction Department. Presumably—since he had sometimes seen her with oily hands and carrying a spanner—she had some mechanical job

With the computer's gift to writers of speed and efficiency comes the loss of an archive.

on one of the novel-writing machines.")

Orwell's computer analogies, though, were apt. The heart of Big Brother's control over the society was his ownership of the collective Random Access Memory ("He who controls the past controls the future").

### Losing Literary History

What are computers doing to literature? In 1984 the Party machine was busily engaged in rewriting all of the classics to conform with orthodox thought and to remove any inappropriate *doubleplus-good crimethought* ("Under the spreading chestnut tree, I sold you and you sold me"). Now, though, we writers hail the coming of the word processor as the greatest boon to productivity since we put down our hammers and chisels and picked up the paint brush. But Pulitzer Prize-winning playwright Marsha Norman, in her interview with *PC* last summer ("Marsha Norman: A Broadway Playwright Collaborates With The PC," *PC*, Volume 2 Number 3) pointed out that with the computer's gift to writers of speed and efficiency

comes the loss of an archive. Historians today still pore over the remaining hand-written drafts of plays by Shakespeare or novels by James Joyce or stories by Mark Twain to chart the development of a masterpiece.

With a word processor, the end product may be produced quicker and may even be better, but all of the rewrites and block moves and searched-and-replaced character names will be lost in an electronic ether and therefore *will never have existed*.

And what about civil liberties? If all of the educational, financial, and personal data on our lives are to be maintained inside the volatile memory of a computer database, what tangible proof do we have of our passage? Could not my very existence be wiped out by some ERASE SANDLER.\* command? I would become, in Orwell's term, an unperson.

"Does the past exist concretely, in space? Is there somewhere or other a place, a world of solid objects, where the past is still happening?"

"No."

"Then where does the past exist, if at all?"

"In records. It is written down."

"In records. And —?"

"In the mind. In human memories."

"In memory. Very well, then. We, the Party, control all records, and we control all memories. Then we control the past, do we not?"

But I am at heart a cautious optimist. I believe that if we keep our eyes and ears and minds open, we can fight off the assaults of Big Brother and Big Government and Big Business. Computer hackers and computer users can, if they choose, use their powerful tools as guardians of their privacy. We can use our computers as windows to the world instead of allowing them to be used as spies in our midst.

We can, if we try, make Orwell's 1984 a footnote in literature. But never let it be said that George Orwell's novel was off the mark: 1984 may fail as prophecy if it succeeds as warning. ■

# It's Not Easy Being Green

Finally there's a game package created especially for monochrome snobs. But unless you're a maze maniac, it may send you back to the frogs.

**P**C-Land is inhabited by two types of people: we sobersided, industrious owners of monochrome monitors—hard-working souls who keep the economy moving—and you frivolous, irresponsible users of color/graphics cards, frittering away your time on unproductive recreational pursuits. But sometimes even a monochromer needs a break.

Well, nyaah, nyaah, nyaah, all you graphics card owners! We monochrome types, dullards though you may consider us, finally have a game of our own. Not, mind you, another pale chartreuse version of what you multichromers view in vibrant shades of puce, vermillion, and ochre. No, this is the genuine article, a game program solely for us intellectual giants who look upon childish things with haughty disdain. See that notice right up there at the head of this article? "Requires IBM monochrome monitor." Neither the amber avant-garde nor you card-carrying colorists need apply.

## *One Hundred And One Monochrome Mazes*

IBM Corporation  
P.O. Box 1328-C  
Boca Raton, FL 33432  
List Price: \$35

Requires: 64K RAM, one disk drive, IBM monochrome display.

CIRCLE 797 ON READER SERVICE CARD

The first level of mazes is fairly simple and straightforward. This is Maze 7.

This program doesn't come in any Ziploc bag. It arrives in a flannel-gray IBM plastic binder. And look at the brilliantly imaginative logo they've come up with: "Amazing fun for the whole family." Clearly some bright monochromer at IBM has a way with words. All monochromers, of course, are gifted.

## Masterpiece Theatre

And what a classy introduction. "For millennia," the manual begins, "man has made mazes." High-tone stuff like that doesn't come with putative amusements about amphibians getting knocked off by tractor-trailers.

The manual claims that you have to start up the program with the machine off or perform a three-key system reset. That's a polite fib so that you'll get to see the clever programming trick planted in

the AUTOEXEC.BAT file. When you invoke the program, you get the message "Abandon hope, all ye who enter here."—Dante." The trick, of course, is that everything past the 'abandon' is ignored by DOS. The file that's then invoked is named 'abandon.exe. Being a monochromer, you are smart enough to realize that you can type the filename in right from the DOS prompt.

You cannot avoid the classic IBM logo as the program begins, but why on earth would you want to miss the symbol that proves you bought The Right Stuff? Then the program plays a musical fanfare, and *One Hundred and One Monochrome Mazes'* own logo appears.

You then select a series of options: number of players (1–8), marker speed for each player (1–9), type of scoring (counting points, keeping time, or, for the most timid or sporting, no scoring at all), full sound effects or not, and the number of the maze you want. The mazes come in ten graded difficulty levels, plus number 101, the toughest. If anyone has played for points at the level of the maze you've selected, the "Hall of Fame" for that level is displayed—the top three point scores and the initials of the scorers. Pressing the spacebar then gets you the message, "Hold tight! You are being transported to Maze X".

The mazes consist of light and dark

## PC ARCADE

green shaded blocks, and black spaces that are "pools"—fall into one and the game is over. The dark green areas make up the path, and as long as you manage to stay on it you're safe. The light green areas are the walls of the maze. If you bump into them, you'll bounce right off, and if you're not careful, an unexpected bounce can land you right in a pool. You, incidentally, are a light green square. Don't take it personally.

At level one (the first ten mazes) pools and walls are the only problems you have to contend with. After that things get trickier. You think you're going down the right path when an "invisible wall" suddenly pops up in front of you. These have an uncanny way of bouncing you into a pool. They always come up in the same place, though, so you can memorize their positions and either avoid them or prepare a course of action.

Even more fearsome are the trap doors that can suddenly open up behind you. These look and behave exactly like pools—fall in and you die. They can be especially tricky if you bounce off a wall and then discover a trap door behind you. There are also gates that slam shut behind you, blocking your retreat. The gates are less dangerous than the pools and trap doors, but they can bounce you into either one. Like the invisible walls, the gates and trap doors always pop up in the same place. Memorizing them is mandatory at the game's higher levels.

One final thorn: the paths through many higher-level mazes aren't always

obvious. They may be broken up by pools one block wide.

You may study a maze for as long as you want before you begin. Once you start, you can change direction with the four arrow keys. Your marker has

**The paths  
through higher-level  
mazes may be  
broken up by pools  
one block wide.**

momentum of its own, depending on the speed you picked at the outset. You'll continue blithely the way you're going until you command a change in direction from the keyboard or until you bump into a wall, which causes you to reverse direction.

If you hit the arrow key that points the same way you're heading, you'll jump the next square. This is the basic technique for leaping across pools one square wide. That's easy enough to do when you're moving slowly, but mistime the jump and you land in the drink. To go around a bend and jump a pool, you need a running start of two squares on the side of the pool after you turn.

And that's all there is to it, except perhaps in maze 101. The manual implies that that maze adheres to different rules, and gives hints about jumping over untripped trap doors and gates.

The more advanced mazes are often beautiful and complex, reminiscent of Greek labyrinths and Victorian topiary mazes. These are Maze 81 (left) and Maze 92, two of the more challenging mazes in the package.

Flip the pages. You see PC modem cards with fewer features advertised for as much as \$599. Up until now that's how much it cost to make a modem capable of transmitting at 120 characters per second (1200 baud). It doesn't take a computer to figure out the savings in phone line charges when you communicate four times faster than the 30 character per second modems (300 baud). Now you can have the solution to your communication needs at an affordable price.

### SEE HOW THEY WORK

You can imagine how precise the components have to be to convert tones over a phone line into 120 characters every second. Precision equates to cost. With the advent of the mass market in personal computers the economies of scale drove the costs of manufacture down, but did not effect the precision required. The technology used is called "analog filtering". It is the process of sending (modulating) and receiving (demodulating) tones with perfect pitch. A lot of adjusting, noise suppression, and a little magic is required. Real expensive. Some use lots of chips and filters (known as discrete components). The latest rage is LSI (Large Scale Integration) technology. Which is the same old analog stuff condensed onto fewer chips.

### ADVANTAGE #1

Digital Signal processing

### A NEW IDEA

We took a different approach. Through the use of four microprocessors the tones are chopped up digitally and measured millions of times per second, eliminating the need for analog circuitry. Two microprocessors do the modulating, two the demodulating. The chips are programmed to emulate the 103 (30 characters per second) or 212 (120 characters per second) standards and determine the correct speed automatically. It's a proven technology that provides outstanding performance. Best of all, it's inexpensive and reliable.

**\$299 212A**

**1200 Baud,  
Auto-Dial,  
Modem for IBM PC**

**PC 212A/1200:**

# A GENUINE BREAKTHROUGH

## NO CORNERS CUT

We included every feature you would want in a modem card. It's FCC registered for direct connection to your modular phone jack with the cord which is included. There is a separate modular jack for your telephone or you can listen through the onboard speaker. The auto-dialer works on rotary lines, tone lines, or a combination of both, and will pause for use with Sprint or MCI. It will work in originate or auto-answer modes. A separate microprocessor, a Z8, controls all the functions.

## ADVANTAGE #2

Optional external serial port connector

## AN ASYNCHRONOUS ADVANTAGE

The modem board is addressed in the software as COM1 or COM2 and we have a handy little option you ought to consider. If you would like to use the asynchronous communications port when your modem is not in use, we will add a connector and the necessary circuitry for just \$20. This saves you the hundred bucks or so you would spend for another async card and saves a valuable slot. It can be configured as COM1 or COM2 and works just like IBM's does.

## THIN IS IN

It plugs into your IBM PC or XT and occupies any one slot since it is just 1/2" of an inch thick. This is made possible by using a special speaker which is just 1/8" tall. Competing brands either use a conventional cone type speaker, or they just skip the speaker altogether. Some modems also have large transformers which allow no valuable space.

## ADVANTAGE #3

Just one slot in PC or XT

## LET'S TALK SOFTWARE

Our modem is 100% compatible with the Hayes software commands so you can use any of the popular communications packages like IBM's Asynchronous Communications Support, CrossTalk, Transend, or PC Modem. We go one better than the competition. We include PC-TALK III. PC WORLD magazine referred to it as "the benchmark that other PC communications packages are measured against." It stores phone numbers, handles setting the modems characteristics, saves to disk files, transmits from disk files, even binary files. You can program up to forty keys to have things like passwords and log-on information be entered when you hit them. And to make sure data is sent and received accurately, the XMODEM protocol detects errors caused by poor line quality and automatically retransmits the data.

## WHY BUY FROM US

Because besides having the best product on the market, we stand behind it and you. You get factory direct technical support after the sale. If at any time during the one year warranty period your modem should require service, we will fix or replace it within 48 hours.

Notice also there are no hidden charges in our price. Nothing extra for credit cards or COD charges. We even pay UPS shipping. If you still are not convinced, and are ready to buy another brand of modem, ask them if they will take our acid test.

## THE ACID TEST

Qubie gives you a 30 day satisfaction guarantee on your modem. If you are not completely satisfied we will refund the entire amount of your purchase including the postage to return it. If you can, get anyone selling one of our competitor's products to give you the same guarantee. Buy any modem you like and return the one you don't like. We know which one you will keep.

## ORDER TODAY

It's easy to order by mail or by phone.

**BY PHONE:** Call us and one of our sales staff can answer any questions you have and take your order. Have your Visa or Mastercard number handy when you call.

**(805) 987-9741**

**BY MAIL:** We need your name and street address, daytime phone number, how many modems you want, and whether your computer has single or double sided drives.

## VISA & MASTERCARD

\$299 includes. PC 212A/1200 auto-dial modem card, PC-TALK III software, cord to connect to modular phone jack, and manual. 1 year limited warranty.

Optional: Connector and circuitry to use serial port for another serial device \$20.

## SHIPMENT

We pay UPS surface charges. UPS 2 day air service add \$5 extra. Credit card or bank check orders shipped next day. (Personal checks take 15 days to clear)

## PC ARCADE

I'll say Maze 101 is different! For no reason I could determine, it repeatedly gave me ego-gratifying scores of 715,643 and 681,660 for performances that did not strike me as terribly impressive. I'll take 'em, though. At the same speed (3) on maze 98, the best I could manage was 51,759 points, and at level 1, all I could muster was a meager 9,350. According to the manual, your score goes up with the number of the maze and your marker speed, and down the longer you take to complete the maze. You don't have to finish to get a high score, however, as I found repeatedly with Maze 101.

The scoring is weird. You may end up with more points by timidly crawling to a particular spot than by blithely hopping along with the arrow keys. Loitering doesn't gain you points, but it doesn't lose you any, either.

The dreaded Maze 101. The manual hints that it has rules all its own, but it is easier to run up a high score.

Switching  
from one maze to  
another is fairly  
quick.

If you've been playing for points and come up with one of the three highest scores for the current level, you're asked to enter your initials in the maze archives. You can also race against the clock, which has the virtue of being absolute, but you don't get a time unless you finish. The Hall of Fame doesn't keep track of time scores.

As you make your way around the maze you hear an occasional beep whether you've chosen sound or not. It seems to have something to do with hitting the walls. If you've picked the sound option, you get a little victory tune as a reward for finishing a maze, and a downward glissando-cum-razzberry when you fall into a pond. The program's response to an invalid menu entry is a three-note error tune that sounds suspiciously like the  
*(continued)*

# Drowning in a sea of solutions?

## Help's within reach...

Applications backlog. Technology blur. Mounting user pressures. Staying abreast of changing prices. A tidal wave of problems!

Even if some answers are available, you have to go to too many sources and sift through so much information, there's not enough time to locate the solutions to your immediate and most important problems.

Well, help IS within easy reach—in the form of an information system that displays all your current software, hardware and communications options for instant reference.

That system is DATA SOURCES, and you're invited to make it work for you. Simply fill in the coupon and we'll send you DATA SOURCES 4 quarterly editions at 50% off their regular cover price.

What DATA SOURCES does is organize your options. It guarantees that you've considered all relevant products by guiding you to those with the best possibility of success.

DATA SOURCES is a conveniently sized, extremely well-organized and skillfully indexed 2-volume reference...maintained on a data-base, constantly updated and published quarterly

### YOU GET...

**HARDWARE**—Over 16,000 products from Micros to Mainframes including peripherals—terminals, printers, memory devices, etc. ...organized by systems compatibility

**SOFTWARE**—The largest available inventory of 17,000 business packages for micros, minis, and mainframes including operating systems, utilities, and application packages.

**COMMUNICATIONS EQUIPMENT**—From modems and multiplexors to local networks, carriers and services, plus all diagnostic and test equipment.

**SERVICES, SUPPLIER, SUPPORT**—Most complete organized listing of suppliers from installation design to maintenance and data center operations.

### NEW FEATURES...

- ✓ Quick-reference product comparison charts
- ✓ Market-tracking trends of new DP products.
- ✓ Before-you-buy selection criteria and checklists
- ✓ Product Hotline—the very latest information on products announced between issues of Data Sources.

### ORDER NOW AND SAVE 50%

**Yes!** Rush me the latest two-volume edition of DATA SOURCES and enter my subscription at \$60.00 for 4 quarterly editions save a full 50% off the regular cover price.

**PC ARCADE**

opening of the old Gillette Blue Blades "Look Sharp" theme.

After each game, there's a short wait while the program restores the maze and brings you back to the starting point. After each full round with more than one player, you get a summary of the scores for that round. The program does not keep cumulative scores or times.

To change any of the game parameters, you hit Esc while the marker is on the starting block. Switching from one maze to another is fairly quick, but to change

After  
a while, Greek,  
Roman, Victorian, or  
Venusian, the mazes  
all start to look the  
same.

anything else, including your marker speed, you must wait for the full menu. If you decide you've had enough, press the appropriate key (the screen prompts you) and the message "Goodbye" will appear.

The manual warns you, and it's absolutely imperative, to adjust the contrast so that it's easy to see which of the three brightness levels is which. You, fellow monochromer, guessed that already.

**Amphibians On My Mind**

There's just one problem, friends. True, there are 101 different mazes, and they do vary greatly in their difficulty, and the speed options do make things even more interesting. But after a while, Greek, Roman, Victorian, or Venusian, the mazes all start to look the same. After awhile you get kind of numbed out.

Come to think of it, amphibians aren't so bad. Aristophanes even wrote a play about them. That's certainly classical enough for anybody. And who among us would dare attack a cultural institution like Kermit? Besides, when you look at it rationally, this screen's really just the right color . . . Send in the frogs! ■

# Do You Run Your Business OR DOES IT RUN YOU?

The biggest headache you may be facing these days is getting better control of your business. Tracking unpaid bills, sending out second billings, monitoring which salesman sold how much and to whom, keeping track of inventories, and on and on.

There's a remedy. It's called VersaForm...the business database.

VersaForm is a powerful database designed specifically for business, but based on the simplicity and convenience of your familiar business forms.

## If you can fill out a business form, you can create a database.

VersaForm starts with your existing forms and procedures. As you copy your forms onto the screen, VersaForm automatically creates a database for you. It records and saves information from Purchase Orders, Invoices, Job Estimates, Disbursement Ledgers... maybe even a few things you're not recording that you should be.

VersaForm is an electronic file cabinet that will store all this information, yet have it at your fingertips when you need it! It's designed with a non-technical user in mind, so you can concentrate on streamlining your business with none of the usual database headaches.

## Adapts to your business... your way.

With VersaForm you don't have to completely re-orient your staff. It fits right into the way you're doing business now. Only now your operations will be completed more efficiently and with electronic speed.

- A doctor in Moulton, Texas, posts his patient billing and completes his medical insurance forms with VersaForm.
- A small college in Wheaton, Maryland, uses VersaForm to create tuition invoices, class lists, accounts

receivable, and accounts payable.

- A computer supplies company in Mountain View, California, writes payables checks and does expense distribution with VersaForm.

- A roofing company in Green Bay, Wisconsin, computes job estimates, contracts, invoicing, and tracks actual costs with VersaForm.
- A manufacturer in Beaver Falls, Pennsylvania, uses VersaForm to build his company's parts records, and generates "where-used" lists.

VersaForm has the power to do these jobs and more because it's designed especially for business. It can also calculate taxes and prices, and can look up discounts, so you don't have to. VersaForm will even print on your own pre-printed forms.

## Full information together fast.

Pulling information together from paper files can be time-consuming and frustrating. Why make it tough? VersaForm puts vital reports like sales analyses, overdue payables, open purchase orders, and alphabetical employee lists at your fingertips. Minimum effort, maximum results.

## All in one easy-to-use, integrated package.

VersaForm provides a screen formatter, a data entry program, a database, a report generator and a forms printer. And you can purchase pre-designed Templates for standard jobs like Purchasing, Invoicing, and Expense Journals. VersaForm is the all-in-one business productivity tool. Ask for a demonstration at your computer dealer. Or contact us directly.

# Living And Communicating

A collection of philosophical essays and an information-packed handbook on communications sources both include useful material for PC users at every level of experience.

**B**ooks aimed at microcomputer users are overflowing bookstore shelves and dominating many displays. B. Dalton Bookseller, for instance, ran a 20-page color advertisement devoted solely to books about computing in the September issue of *Scientific American*. The number of books being published on this subject is growing exponentially.

Many of the titles that have appeared on bookstore shelves are primers for novice users of the computer. They are written to help the neophyte overcome the trauma involved in mastering a new and complicated piece of equipment. Now there's yet another new book aimed at the reader who has just bought a new computer. If you're an experienced hacker and think this is old hat, don't hit the DEL key yet—this book is different. Michael Crichton's *Electronic Life: How To Think About Computers* has something for anyone with an interest in computers or computer technology.

Two factors set Crichton's *Electronic Life* apart from other computer books. First, Crichton is a well-known science fiction writer—and he writes well. A

## Electronic Life

Michael Crichton

(Alfred A. Knopf, Inc., New York, 1983)

209 pages; hardcover \$12.95

CIRCLE 691 ON READER SERVICE CARD

graduate of both Harvard College and Harvard Medical School, he is the author of such best-sellers as *The Andromeda Strain* and *Congo*. He also directed such movies as *Westworld*, *Coma*, and *The Great Train Robbery*. Though the literary merits of his novels have been debated, his sci-fi treatment of biological subjects is provocative and knowledgeable, thanks to his medical background.

The second distinguishing factor is Crichton's common-sense approach to new and often confusing technology. His

simple and practical approach to the subject matter is reassuring to the first-time computer user, who often must overcome a degree of technophobia before feeling truly at home with the machinery. Crichton never allows the reader to forget that it is the user who controls the machine, and not vice versa.

In the introduction, Crichton explains that *Electronic Life* started as a series of notes for friends who had just bought home computers. These notes were expanded into a series of mini-essays

## BOOK REVIEW

arranged in alphabetic order under topic headings. Some of Crichton's entries are only a few sentences long; others go on for several pages.

The entries start with the topic heading "Afraid of Computers," and before Crichton works his way through the alphabet, he manages to cover a great deal of computer-related material. Just about every subject of interest to the first-time computer user is covered—and not just the nitty-gritty about the machine and its workings. Philosophical considerations about the relationship of man to his new machine are discussed as well. It may not be classical philosophy, but readers interested enough in computers to read this book will relate well to it.

Crichton's philosophical bent leads him to some fairly off-beat topics. Here are some samples:

- *Computer Calvinists.* (Calvinists regulate things. So far, their Computer Age counterparts haven't messed much with computers, but Crichton fears the worst and hopes "that for once in the twentieth century, a new technology will stay free" of "Calvinist" control.)
  - *Computer converts.* (Says Crichton: "As with the reformed hooker or ex-smoker, beware the zeal of the computer convert. The most vigorous opponent of the machine becomes its most temperate advocate.")
  - *Feeding the dog.* (Crichton points out that "at the moment there is no commercially available Dog-Feeding Peripheral," but there probably will be. His point is that computers can do a lot of things. In fact, they can do almost anything you want.)
- In addition to the off-beat, Crichton offers commentary on mainstream topics. Among the subjects he covers are:
- *Computer art.* (Crichton considers computer-generated writing, music, and programming as computer art. Computer art is really "human artworks possible only with a computer." They "inevitably show the traces of their human creator.")
  - *Documentation.* (Crichton gives a list of criteria that should be committed to

memory by anyone attempting to write instructions about anything that has to do with computers.)

- *Games.* (Crichton thinks games are fine. They help familiarize us with technology. And computers "are the most compelling toy ever invented.")

Each of Crichton's meditations hammers home the message that the computer

### Calvinists so far haven't messed much with computers.

is a machine—different perhaps than any other machine ever invented, but still a machine.

At the back of the book there is an appendix for the Apple II and one for the IBM PC. These contain some start-up help to assist new users. There are also several elementary BASIC programs similar to those found in every other how-to-do-it computer book, and two whimsical longer programs (*Mystery Writer* and *I Ching*) that the author has written and that have been adapted to the Apple and IBM machines.

—A.S.E.

Whether you use your PC a lot or just a little, whether you're a novice or an expert, *The Complete Handbook of Personal Computer Communications* can help you steer a course through the maze of possibilities in the ever-expanding communications universe.

The *Handbook* provides detailed descriptions of the many services available to turn you and your PC into communicators. From information utilities like The Source and CompuServe to encyclopedic

# SAVE TIME

As a professional,  
time is your  
stock in trade. With  
Time Accountant\* and your IBM PC,†  
you save time and expense records  
as compact, protected data files.  
Then you save time as your PC  
automatically calculates charges  
and generates invoices.

Time Accountant is a flexible tool that  
allows you to track up to two dozen  
professionals, maintain existing  
codes, adjust rates or charges, bill  
at any time and use your own forms.

# How to teach your kids about the IBM PC.

**N**ow you can teach your children how to use your PC without bogging them down in the user manual...without spending hours demonstrating the simplest functions...and without fear that they'll break your PC because they don't know how to use it properly.

You can do it with the PC edition of *Computers for Kids*—a BASIC learning text whose Sinclair, Apple, and Atari editions have already introduced thousands of children and parents to computers.

*Computers for Kids* teaches children age 8 and older to write their own programs in less than an hour—without the necessity for previous knowledge of algebra, variables, or computers. And there's a special section that keeps parents and teachers on the same successful command path.

Starting off with an easy-to-understand explanation of how to use the IBM PC, your kids will progress quickly to flow charts and simple print programs...to loops, graphics, and other programming concepts that show the young user how to make the PC do exactly what he wants—in non-technical language that makes life easier for both of you.

Take it from Donald T. Piele, Professor of Mathematics at the University of Wisconsin (Parkside): "*Computers for Kids* is the best book available for introducing children to the IBM PC. And it's a perfect tool for adults who are learning about computers and programming with their children."

So do your children a favor. Do yourself a favor. Order the PC edition of *Computers for Kids* today!

Here are just a few of the useful and exciting topics covered in *Computers for Kids*:

- What is a computer?
- Flowcharting
- Running the IBM PC
- Getting Ready to Program
- PRINT and Variables
- GOTO, INPUT and RND
- IF-THEN and FOR-NEXT
- Graphics Programs
- Sample Programs
- Glossary of Statements and Commands
- Notes for Teachers and Parents

## BOOK REVIEW

databases and free computer bulletin boards. *The Handbook* tells you what's included in each service, how to sign up, how much it costs, and just about everything else you should know. There are chapters on teleconferencing, working at home, and electronic shopping or banking. For those interested in the technical aspects of data communications, there's a nuts and bolts chapter. For beginners, Glossbrenner explains how the PC works, and there's a glossary that covers everything from bits and bytes to bauds and modems.

But the book is probably best used as a guide to help you decide which services to buy. For example, if you play the stock market, The Source and CompuServe provide commodity news, historical information on stocks, market quotes, and news from business publications. The *Handbook* points out, however, that a serious investor should subscribe to Dow Jones News/Retrieval Service (DJNS), which includes estimates of corporate earnings for 2,400 companies, information from Securities and Exchange Commission files, and statistics on 3,200 individual companies, as well as economic analysis, commentary, and forecasts. This wealth of information is not only helpful, it can also save you money.

Glossbrenner finds that the online information and analysis is so extensive that based on it, sophisticated investors can make their own investment decisions and have a discount brokerage firm handle their trades. This saves investors money on every transaction and eliminates the need for an expensive, full-service brokerage house. Glossbrenner advises potential DJNS subscribers to make a small investment in a software package that accesses DJNS to obtain the specific information needed and automatically analyzes the data. *The Handbook* includes a list of such packages.

## The Big Debate

If you want a service that provides everything from electronic mail to an

encyclopedia database, the *Handbook* helps you decide between The Source and CompuServe. There's a comparison of the costs and features of the two utilities. Glossbrenner admits to being a fan of CompuServe, in spite of several obstacles novices often face with it. He's quick to point out how beginners can get around the problems—for instance, how to get out of MicroNet, the programming part of CompuServe. Glossbrenner provides a list of additional documentation that may be helpful to users, and suggests that beginners on CompuServe and The Source will also find the online sessions, abbreviated "how-to" manuals, extremely useful.

Experienced users can save time and money with Glossbrenner's shortcuts, including a "secret" command (RCV) on The Source that lets you upload double-spaced text. This command saves you time, and, as Glossbrenner points out, when you're online, time is money.

### Selling Encyclopedias

Saving time can also increase your productivity. Encyclopedic databases contain a vast array of information. Scientists, students, and business people should consider subscribing to one of the three encyclopedias Glossbrenner describes: DIALOG, BRS, and ORBIT. A sampling of the databases reveals various indexes, a career placement registry, an electronic yellow pages, and of course, encyclopedias.

Potential subscribers are reminded that encyclopedic databases are best used to get information on where to find information. The services generally provide only abstracts and not the full text of magazines or newspapers.

If the ability to do a complete search quickly isn't enough, and you need the full text of certain publications, the *Handbook* describes two alternatives, the New York Times Information Service (NYTIS) and NewsNet. NYTIS contains the complete text of the *New York Times* from 1980 to the present, plus abstracts of many other publications. For the inside scoop on your business competition, NewsNet contains

the full text of 150 industry newsletters, many of which include daily updates.

This is just the beginning. Glossbrenner shares much more about the commu-

nication potential of your PC. His book is filled with intriguing, useful information to keep you and your PC communicating day and night.

—L.E.

## SORRY CHARLIE!

If you just bought a 16-bit, 8088 computer with a 160K drive, 256K Ram, Harddisk and spooler software, MS-DOS, Wordstar, Calcstar, EZ Writer, Color Graphics Basic and a printer port, you're going to be sorry when you read this ad. WHY? Because Scottsdale Systems will give you this for \$1099.

The color graphics board built-in to the PC-Plus TM generates a resolution of 640x400 dots in monochrome, and generates 6 colors. The circuit board is presocketed for 256K, and an 8087 chip, and is warranted for a full year by 50 Sanyo Service Centers.

The PC-Plus TM will run many programs written for the IBM-PC®, yet costs less than one-third as much. Due to the huge demand for the PC-Plus TM you may have to wait, but give us a call for more information. Better safe than sorry!

**DATABASE FACILITY**  
GDSS is suited to interface to any existing or user-developed databases for effective aggregation, organization and manipulation of data. The system has a large local storage capability and can accept files from either a host computer or other source. Once loaded into GDSS's own internal database, subschema or views developed by multiple users from a common file can be interrogated interactively through the use of a powerful query language, which allows the user to select or sort particular items as well as perform mathematical computations on the results.

**MENU STRUCTURE**  
GDSS offers easy-to-use menu-driven software, enabling the user to design

charts quickly. Customized menus may also be developed by the user for specific applications providing the ultimate in flexibility. In addition, the command file structure can store frequently used formats for production mode operations making the system a high-speed graphics report generator whereby hardcopy is completely automatic.

**EASY TO USE CHART BUILDING TOOLS**  
**Digitizer Tablet**

GDSS offers unlimited format styles, including bubbles, scattergrams, 3-dimensional bars, and multiplex formats. Layouts, overlays of equal or different sized graphs, rotations, split screen and multiple graphs on the same screen are also possible. In addition, new formats can be customized

through the use of the graphic editor and optional digitizer tablet. This enables the user to edit and modify the graph as well as design elements of any shape or size.

**ARITHMETIC OPERATIONS**

GDSS provides immediate support in the process of analyzing large amounts of data to extract trends, and, in general, support the complex decision making processes. Numerous arithmetic, statistical and logical operations are available for these analyses.

**DEVICE INDEPENDENCE**

GDSS is totally input/output device independent — the system can accept input from many sources and produce output on a variety of graphics hardcopy devices

from single line printers to high resolution film recorders. GDSS currently runs on the IBM PC, Convergent Technologies, Burroughs, NCR, Altos and Victor hardware.

**DEMO DISKETTE OFFER**

No other business graphics package offers all the features of GDSS. To illustrate this, our demo diskette and User Manual are available for your review at \$35.00. This amount will be applied to your purchase of GDSS. Please call or write for further information:

3510 Dunhill Street, Suite B  
San Diego, California 92121

# FUNCTION PAK 512

## FROM IMAGE TECHNOLOGY

### \$349

The FUNCTION PAK 512 provides up to 512K of RAM, Parallel Printer Adapter, Async Adapter and Clock/Calendar; all on a single card. Ideally suited for the IBM PC XT, the FUNCTION PAK is the 512K ADVANTAGE!

Call for location of local dealer.

List Price	
64K	\$349.00
128K	419.00
192K	489.00
256K	559.00
320K	629.00
384K	699.00
448K	769.00
512K	839.00

Includes Clock/Calendar, Electronic Disk and Spooler Software.

Please specify Printer 1 or Printer 2.

Async cable — \$29.00

One Year Warranty

ASYNC PORT  
RS 232C/Serial Port - Available as  
Comm 1 or Comm 2. Requires  
cable. Fully IBM compatible. An  
optional second Async Port is  
available on a Piggy back module.

#### MEMORY

Provides 64 512K Dynamic RAM with Parity checking. Computers with 256K system boards can map 128K of the Function Pak's RAM into D00000H - EFFFFH for use with Electronic Disk and Spooler software.

#### CLOCK/CALENDAR

Maintains the time and date while the computer is off. Operated by a 1 year lithium battery.

#### PARALLEL PRINTER PORT

Fully IBM compatible. Uses standard printer cable.

#### COMM MODULE

Adds second Async Port. Cable included. \$99.

#### GAME CONTROL MODULE

Fully IBM compatible. Cable included. \$59.

Optional Async and Game Modules installed

# The Researcher's Assistant

An integrated group of software programs from Pro/Tem Software takes the fuss and bother out of documented research for report writers, students, and professional scholars.

**L**ike it or not, documented reports are facts of life. Scholars—students and professionals—crank out many of them, but they also figure in a variety of government, nonprofit, and corporate enterprises. To write a good documented report is to have read important material, reached a reasoned judgment about it, communicated your findings persuasively, and demonstrated your sources so that others can retrace your steps.

Pro/Tem Software of Stanford, California, offers an integrated software package that report writers, current or lapsed, should regard as manna from heaven. When used with the word processing program *WordStar*, the three programs, *Notebook*, *Bibliography*, and *Footnote*, provide

writers with a well-integrated writing system for taking notes, writing papers, formatting footnotes, and creating bibliographies.

Although you can use *Notebook* and *Bibliography* with most word processors and *Footnote* also works with *Select*, the program's author clearly had *WordStar* in mind. *Notebook's* built-in word processor, for instance, emulates *WordStar's* command language, so that moving from one program to the other does not require a cumbersome transition to another set of control codes.

## **Notebook: A Roomy Database**

*Notebook* is a database management program designed specifically for the storage and analysis of written information. Other database programs can store text, but they often place severe restrictions on the amount of text you can store and the format in which you can store it. For instance, *dBase II* permits you to store only 1,000 characters per data record. *Notebook* permits you to store up to 32,000 characters in a single data record and up to 4,000 characters in a single data field.

When used with the PC's color adapter card and a color monitor, *Notebook* presents messages enhanced with distinctive colors. *Notebook* also contains its own formatting program; a menu-driven com-

mand module makes printing your databases a snap. The program is easy to use, a rare asset in the forbidding world of database software. All functions are driven by informative menus, and like *WordStar*, *Notebook* displays a list of the most frequently used commands while you're working.

Suppose your bibliography database was sorted alphabetically by author, but knowing that in your subject only the more recent sources would be useful, you wanted it sorted by date of publication. Had you recorded your bibliographic information not on three-by-five cards but on data records using *Notebook*, you could easily and rapidly (within about 30 seconds) reshuffle your database to suit your changing needs.

You can also use *Notebook* to set up a bibliography database. But its real value in the research process emerges when you use it to store, sort, and select research notes. Let's suppose your corporation asks you to research the investment climate in Mexico. After a quick visit to the library or a fast search using an on-line research database, you return to your office with photocopies of every relevant article published during the past 2 years in six major sources. You call up *Notebook* and design, following the program's easy menu-driven suggestions, a data record format containing fields for a topic title, a

## WRITING

bibliographic reference, up to 4,000 characters of notes, a note on the type of material the record contains (for instance, "quotation," "definition," or "key point"), and the date of entry.

Once you've created the data record format, you can start taking notes. Let's say you begin with an article in the *Mexico City News* reporting a speech presented by a major Mexican government official on the role of the state in the economy. Your notes might look like Figure 1.

As you enter text, *Notebook* automatically expands the data record to fit what you've written. Notice, in Figure 1, that the reference field contains an abbreviated reference. This reference refers to a bibliography record you can create in another *Notebook*-constructed database.

### A New View

Once you've finished reading, you can use *Notebook* to study your notes for maximum understanding of the material. Learning experts have long agreed that the best way to study is to divide your notes, sorting and restructuring them to produce illuminating patterns. To get started, you ask *Notebook* to select all records containing the phrase "key point" in the field "record type." It does so and shows you a new view of the database. You print it out, study it, and a major pattern begins to

emerge: It seems clear that Mexico's government sincerely wishes to invite foreign investment, but its political position is such that it cannot risk liberalizing investment legislation that makes investment in Mexico a tricky process.

To get more insight into your material, you select more views, asking to see, for instance, all the records that mention "government official" in the field "notes" and "quotation" in the field "record type." *Notebook* rapidly shows you all records in which Mexican government officials are quoted. With several more such illuminating selections, you're ready to get started with your writing. To produce a writing guide, you ask *Notebook* to sort and print all the records alphabetized by topic. You also have handy several other printed sorts and selections, including one listing all the government officials' quotes that you'd like to use.

### Footnote and Bibliography

As you write your report with *WordStar*, it's not necessary to concern yourself with the details of your references. Whenever you want a note to appear, simply enter an "at" sign (@) and insert the reference material in an abbreviated format (for instance, "%Castellanos, 1983, p. 1"). The @ symbol tells the *Footnote* program, which you'll run on the file once

Topic	:Role of the state in the Mexican economy
Reference	:Castellanos 1983, p. 1
Notes	:In a speech to foreign investors in Mexico :City, a key government official, :Assistant Finance Secretary Francisco Suarez :Davila said that Mexico needed foreign :resources "provided they adhere to existing :legislation." He said that "there is no :room for argument on the role of the state :in the fight for economic recovery," and :that "the state is in charge of conducting :and orienting the development process."
Record Type	:key point, quotation
Date Entered	:11/21/83

Figure 1: A completed *Notebook* data record with five fields designated and information filled in.

## WRITING

you're finished writing, to insert a footnote at that spot and to number it automatically. The percent symbol tells the *Bibliography* program to look up that reference in the bibliography database, to insert the full text of the citation instead of the abbreviated reference, and to include the full text of the citation in an alphabetized bibliography. You simply run these programs on your text file and within minutes you've got a formatted paper with footnotes at the bottom of the pages and an alphabetized bibliography at the end of the text. If you've ever suffered through typing up a paper with footnotes, all this probably sounds too good to be true.

To finish your paper, you first run *Bibliography*. When it's finished, your report has been altered; in place of the abbreviated references (like "Castellanos, 1983, p. 1") you'll find the full citation, which *Bibliography* has cunningly extracted from the *Notebook* bibliography database you constructed. It has also created an alphabetized bibliography of all the bibliographic items you cited in your text. To produce a finished paper, you need only run *Footnote*, which automatically numbers your footnotes and places them at the bottom of your report's pages. If you need to insert or delete text, you repeat the whole process as necessary until your paper is finished. Instead of 3 days and six trips to the typist, this documentation process takes about 10 minutes.

Of course, the programs are not flawless. *Notebook*, for instance, runs slowly; scrolling through a large database without the aid of a hard disk is a slow and tedious job. But if you're already working with *WordStar*, you will doubtless have concluded that more RAM and the software to transform it into a pseudo-disk are more than luxuries. And *Footnote* cannot distinguish between first and second citations of the same work, mandating some manual rewriting of the notes.

These are small quibbles about some fine software. All three programs are remarkably free from obvious bugs. They do what they claim to do. ■

# Engineering Software Exchange

A home-grown newsletter published by a husband-and-wife team is designed to help engineers sort through software and gain confidence in computers.

**E**ngineering professionals have a special demand that they place on personal computer software: They need to know that the bridge they design with it won't fall down. But, their first, more immediate, demand is for PC software with engineering applications.

That need is the rationale for a new newsletter, *Engineering Software Exchange (ESE)*, put out by Charles and Lidia LoPinto, a young husband-and-wife engineering team in Yonkers, New York. The heart of each issue of *ESE* consists of reviews of newly available software. The LoPintos say that it is next to impossible for them to include critical reviews of the quality of programs and simultaneously to publish the newsletter. For one thing, there just isn't enough time. But the main reason is that although both LoPinto's are very knowledgeable about their field, chemical engineering, they don't have the expertise to cover all engineering disciplines in great depth. Their reviews therefore consist of a paragraph- or column-long description of a program, its documentation, and the standard price, computer compatibility,

Charles and Lidia LoPinto, the entrepreneurial team behind the *Engineering Software Exchange*.

and source-code criteria.

The newsletter thus serves as a clearinghouse rather than as a critical journal. "We get submissions of everything from checkbook-balancing programs to heavy-duty structural analyses," says Lidia. "We use our judgment in what we write up, but it's impossible for us to give an in-depth analysis of each program."

Charles elaborates: "One of the problems holding up a lot of engineering software development is the issue of reliability. It's one thing to have a program that puts up a spreadsheet, but it's another thing entirely to design a bridge based on a program—how do you know the bridge

won't fall down? You can put all the bells and whistles you like on a program to warn the user about exceeding its limits, but you still have a problem in certifying its output." The liability is obviously enormous: the general word in the engineering community is that one can trust only the programs one has written oneself—and maybe not even then. Even so, as the experience curve rises with engineering users of PCs, and as more tested mainframe programs get downloaded onto micros, engineers will begin to gain confidence in computers. During the sixties the same concerns were voiced about mainframe programs applied to engineering problems, but those programs are the industry standard now.

A sample of some of the programs reviewed recently in *ESE* shows the diversity of programs being developed: stress analysis for static components like beams, plates, flanges; process simulation of chemical reactions; heat transfer analysis in heating/cooling equipment; combustion efficiency of boilers; sizing pipes and valves for fluid flow; running process control systems; maintenance programs for plotting machinery's operating history and for scheduling repair; and laboratory functions such as spectrum analysis and process control.

The newsletter was born when Lidia, a process engineer who had become in-

## ENGINEERING

involved with computers, left her job at a chemical company. She planned to start her own consulting firm for computer educations in engineering. "Between consulting jobs I had a lot of free time, and I had already been looking for some way to get deeper into my specialty, computer applications for engineering. I wrote a number of articles for the trade press and then began to set up an exchange for software for any system from a TRS-80 up." The queries began flooding in, and she started offering her list for a dollar. Before long, the nature of the queries coming in and the types of software being offered propelled her into the personal computer field,

Our first self-printed issues were pretty awful, but our readers were very forgiving.

where she reviewed not only individually written programs, but also programs from new companies being set up specifically to satisfy engineering needs. "Some news still travels slowly in our presumed electronic society—I'm still getting requests for that original \$1 list!" she exclaims. "I'll send out a copy of our latest newsletter, but the dollar doesn't even cover the mailing cost anymore."

As the newsletter grew, Charles began pitching in. He's a chemical engineer at an oil company (both LoPinto's have Masters degrees in chemical engineering). "Fifty percent of my time at work is spent in computer applications for process design," he says.

A milestone for the newsletter was the purchase of a used, hand-operated offset printing machine. Printing costs had grown unmanageable, and having a printing machine allows the LoPintos to produce advertising circulars for ESE as well as to publish the newsletter. "Our first self-printed issues were pretty aw-

## ENGINEERING

ful," Lidia admits, "but our readers were very forgiving." Now, however, the newsletter sports a polished, professional look. Charles handles the printer and writes some of the reviews, while Lidia does the mailing and most of the writing. A couple of part-time workers help out.

Though *ESE* was not much more than a few sheets of mimeographed paper when it began about a year ago, today the newsletter is beginning to take over the LoPintos' home—they have two rooms of computer equipment in the attic and a printing press in the basement. As each new issue goes to press, "paper starts covering the house and furniture," according to Lidia. Each issue, which currently runs about 24 pages, is a homey mix of news of interest to engineers, CAD/CAM developments, reviews of newly available software packages, and a section reserved for individual subscribers to list their own software—generally small packages that run from \$10 to \$150. The newsletter is published every other month; an annual subscription costs \$48.

To conclude their first full year of successful operation, the LoPintos plan to publish a directory of all the software they have already publicized. "This directory will probably have over 350 entries covering micro and mini software in chemical, electrical, civil and mechanical engineering, laboratory applications, and more," says Charles.

## Meeting a Need

In their compiling efforts, the LoPintos seem to be satisfying a widely felt need in the engineering community; a number of engineering societies are already trying to compile directories of available software. But the LoPintos have moved much faster, and they are seeking to build a base of subscribers and software suppliers that cuts across the divisions among the engineering professions. "Although it sometimes seems that every engineer out there is writing a program, there is a tremendous shortage of useful software," notes Lidia. "The number of engineers writing soft-

Although it started in a small way, *ESE* is now a going business for the LoPintos. "We haven't made any money on this yet," says Lidia. "Everything we've got from subscribers is being poured back into the business." Advertising and direct mail now represent the largest financial investment for the couple. And like traditional newsletter developers, the LoPintos have found that their biggest problem in publishing the newsletter is attracting the potential subscribers they know are out there. "In a formal marketing sense, we're probably a little screwed up—we have no idea what the 'top' is for this newsletter—that is, how many potential subscribers there are out there," notes Charles. "But the letters are still coming in every day."

# Stepping Up To Draft-Aide

A family of products from United Networking Systems will fill the drafting needs of beginning students, professionals, large companies, and everyone who falls inbetween.

**F**or \$95, you can ace your geometry course or for \$595 you can design a skyscraper with *Draft-Aide*, a drafting program for the PC from a company called United Networking Systems, Inc., of Houston, Texas.

The Starter 100 package is the \$95 minimal version "for people who want to learn something about drafting," as the promotional material puts it. The most advanced version is the Pro 300, which is geared for the most professional user. In between are three more versions: Academic 100, Pro 100, and Pro 200. Only two, the Pro 100 and Pro 300, are currently available; the other versions are in various stages of testing. When the complete family of five is on the market, the programs will address every level of drafting interest and expertise.

## Draft-Aide

United Networking Systems, Inc.  
7007 Gulf Freeway, #108  
Houston, TX 77087  
(713) 644-2427

List Price: Starter 100, \$95; Academic 100, \$195; Pro 100, \$595; Pro 200, \$7,500; Pro 300, \$25,000 and up.

Requires: 256K RAM, one disk drive, color interface, color monitor, dot matrix printer or plotter.

CIRCLE 685 ON READER SERVICE CARD

The basic drafting system is fairly simple to use. To draw a line, first place the cross hair cursor at the beginning point and hit a key designated LINE on the *Draft-Aide* chart. Then put the cursor where the line is to end and hit the LINE key again. A line, in one of three line widths, chosen by the user, is drawn between the two points.

To move the cursor you can use the keyboard, a joystick, or a mouse. To draw an arc, you can either specify three points and ask for an arc to be drawn through all three, or you can specify a center, radius, and extent.

One feature of *Draft-Aide* can save you a great deal of time and energy. Once you've drawn an image, whether it is a Bunsen burner or a voltmeter or whatever,

you can store it, later call it up, make it larger or smaller, place it anywhere on the screen, or repeat it as many times as you wish. An image of an intricate transistor or an integrated circuit can be stored and then called up dozens of times for different drawings. The more advanced *Draft-Aide* packages, starting with the Academic 100, allow figures to be rotated and mirror-imaged. When many figures are to be stored for later call out, United Networking Systems recommends using a PC-XT, with its hard disk and much higher storage capability, instead of the regular PC.

With *Draft-Aide*, the PC's screen can display your entire drawing greatly reduced in size, or it can zoom in to give you a 1:1 size when you need to draw or change the original. The maximum size for a drawing is 36 by 42 inches.

*Draft-Aide* also provides a full set of letters and numbers for labelling your drawings. Although there's only one font, you can make the characters as big or as small as you wish. When it's time to print, you can use a pen plotter or a dot matrix printer. Of course, to print a full-size 36-by-42-inch drawing you'd need a rather large plotter.

## All in the Family

The Starter 100 is "an interest-generator, well-suited to high school students," according to Thomas F. Safford, whose

## DESIGN

Houston-based Safford Systems Inc. developed *Draft-Aide*. The firm later merged with United Networking Systems Inc. *Draft-Aide* could be used in a high

school setting by students in chemistry, physics, drafting, or any course involving drawing. An IBM PC in the school library, along

with a Starter 100 package, for instance, would not only save drawing time, it could also encourage more extensive use of drafting. The package can serve as an introduction to the commercial world of computer-aided drafting and might even

### DBPlus™ SORT, COMPRESS, and TRANSFORM dBASE II™ DATA FILES

If you are serious about dBASE II™, you need DBPlus™. This program runs outside of dBASE II™, and performs the following important functions on dBASE II™ data files:

- Sort
- Compress/Decompress
- Transform

DBPlus™ is designed to free you from the chore of typing, or memorizing a new language. In most cases all you have to do is move the cursor to the next menu item and press return!

#### **SORT**

DBPlus™ can sort a data file up to 15 times faster than dBASE II™ on a single field; 32 fields may be sorted in a single pass, and each additional field requires 1% more sorting time.

#### **COMPRESS/DECOMPRESS**

A copy of any dBASE II™ data file can be produced which is only 30% to 40% of the original size.

The compressed file will save you transmission time and phone costs, when you send a data file over a modem.

Making backup copies of large data files can use up many floppy disks. Compressed files will save you space in archival storage.

#### **TRANSFORM**

You can now modify the structure of any data file, by adding, deleting, and modifying fields, without any programming knowledge.

DBPlus™ can also create a new file which is compatible with WordStar/MailMerge™.

**Now retailing for \$125.**

Manual and demo available. Call for a dealer near you.

#### **HumanSoft**

661 Massachusetts Avenue  
Arlington, Mass. 02174

DBPlus is a registered trademark of HumanSoft.

CIRCLE 425 ON READER SERVICE CARD

A detail from a piping diagram generated by *Draft-Aide*. Other common uses for the software would be to generate architectural or electronic drawings.

encourage some students to explore technical careers they hadn't previously considered.

The next step up is the \$195 Academic 100 package, designed for use by universities, colleges, and trade, technical, and company-sponsored schools. It can be used by novices as well as advanced students. The University of Phoenix is considering installing this package for student use and is negotiating with United Networking.

In the middle of the *Draft-Aide* line is the \$595 Pro 100, which "allows users with limited drafting requirements to get into computer-aided design quickly." The Pro 100 might, for example, be used by computer camps or architectural firms that have small computers.

Customers for the Pro 100 have been "both company and independent architects and design engineers, moderate-size engineering and architectural firms, and many levels of technical personnel at the

# Managing Projects for ~~Fun~~ and Profit Using *optional required* Project Scheduler™

As a manager, you know the key to a successful project is good planning. Whether you are involved with Engineering, R & D, Manufacturing, Construction or even Computers, you can't afford to overlook critical costs and deadlines.

**PROJECT SCHEDULER™** is a project management program designed to help management meet deadlines and beat cost targets through fast and easy project forecasting, scheduling, control and tracking of project status. The menu prompts permit easy data entry for modification or update to large, complex project plans. The highly interactive design and visual display reduces project planning time by providing sophisticated "what if" analysis capabilities.

#### Features include:

- Critical Path is calculated and a Gantt chart is displayed after each add, change or delete.
- Interactive "WHAT IF" analysis.
- Display your data/plots using the monochrome or color screen.
- Schedule projects by days, weeks, months or day displayed by week.
- Labor & Other cost data can be input to spreadsheet packages.
- Allocate tasks by:
  - Start & duration
  - Early/Late Start
- Define standard company Resources and Holidays:
  - 24 Labor Grades
  - 24 Other Direct Costs
  - 30 Holidays (multi-year)

- Create detailed & summary reports:
  - Project Schedule
  - Labor & Cost
    - by time period
    - by individual job
- Ability to "complete" jobs for performance tracking.
- Milestone annotation to identify special events in the project.

#### Runs On:

- IBM PC or XT, Compatibles, TI, GRID, TOSHIBA, Others

#### Requires:

- IBM DOS 1.0-2.0 or MS DOS
- 192K RAM
- 1 diskette drive
- Printer (Recommended)

# DOSEASE™

## MENU INTERFACE

### Fingertip Access To The Full Power Of DOS

**Instant DOS Expertise.**

PC-DOS 2.0 is powerful and flexible, but time consuming to learn and difficult to use. Even then, you remain dependent on the manual as a constant reference for formatting command variations and for less frequently used commands. With DOSEASE there is no need to memorize cryptic commands, you are released from dependence on the manual and can now utilize DOS to its full potential.

DOSEASE is the friendly face between YOU and DOS

#### The Main Menu

Access the entire DOS system through the menu list.

The menu is organized into logical subsets to speed the selection process.

You simply enter your choice by typing in a two digit command number and the system instantly displays the appropriate command menu.

#### The Command Menus

The menu describes the function of the command and presents all the available options.

Specify the options you desire for DOSEASE to verify

Press the "ENTER" key and the command is executed. DOSEASE allows you to execute a variation of the same command or return to the main menu.

**DOSEASE is FAST adds COLOR pays DIVIDENDS**

Interact with DOS with fewer keystrokes. Color and highlighting lets you forget the drudgery of DOS. With \$66 (shipping and handling included) get a substantial increase in return on your personal computer investment.

CIRCLE 415 ON READER SERVICE CARD

## DESIGN

larger firms specializing in those disciplines," according to United Networking Systems.

The \$7,500 Draft-Aide Pro 200 package is a full-power drafting software package aimed at large engineering companies.

At the top of the line is the Pro 300 for sophisticated users or entrepreneurs who want to operate their own drafting service centers. This package is also aimed at large industrial users such as aviation and aerospace manufacturers. The basic version of the Pro 300, priced at \$25,000, includes just the software. For a \$75,000 investment, you can also get the computer, a plotter, and a graphics terminal.

The larger versions of *Draft-Aide* use 110 subroutines in Fortran, combined with four external files: two scratch files, one symbol file, and a drawing file. The symbol file can hold up to 500 active symbols created by the user, and it may be accessed by name.

### Fancy Packaging

The *Draft-Aide* software is neatly packaged in a container designed by the New York advertising firm of Ogilvy and Mather. The basic package includes a floppy disk and operations guide, the larger versions will also offer a glass *Draft-Aide* drinking mug and a T-shirt showing a T-square being passed from one hand to another and bearing the legend "I Get Drafted Fast."

United Networking will spend \$3 million on marketing and manufacturing *Draft-Aide*, and it plans to adapt it to other personal computers.

The company plans to distribute the smaller *Draft-Aide* systems through computer stores and bookstores; they can also be ordered by mail. Versions of *Draft-Aide* that can operate on IBM PC systems with less than 256K RAM may be available in the future.

Currently, optional symbol libraries are available on floppy disk for architectural, electrical, electronic, and piping drawings. They cost \$75 each. Symbol libraries

for other disciplines will be available in the future. Special fonts for lettering drawings are available on special order.

United Networking has a "900" cus-

tommer service number, (there is a 50 cent charge for calls) and plans a newsletter to keep *Draft-Aide* users abreast of all new developments and new products. ■

# The Doctor's Experience

Keeping track of patient files can take many hours and still leave gaps. One physician explains the value of computerizing patient records in a database called an E-Book.

**I**n the last week of our 3-year residency in family practice, my partner told me this tale of woe. "I just spent half a day going through the records in the delivery room and making a list of all the babies I had delivered." I groaned because I knew what those records looked like—page after page of one-line descriptions of deliveries, usually scrawled by doctors in the middle of night after many long hours of waiting. "Fortunately," he said, "I found all of mine—I think."

I confess that I felt smug while I listened to his woes. Two years ago I had acquired one of the first IBM PCs in Missouri. Since then I have used it to document every single experience I have had with patients.

There are many reasons for physicians to keep track of their experiences caring for patients. One is to document your experience is to prepare for outside review. Requests to prove one's capabilities are required for hospital privileges in many localities, especially for such high-risk procedures as obstetrics, surgery, and invasive tests (for example, cardiac catheterizations). Several specialty boards, including family practice and emergency medicine, require that doctors be recertified every few years. A review of cases is part of the recertification process.

Systems are available for recording this

information. Residencies may provide special cards to their residents to use for records. Doctors are probably familiar with several methods of organizing this information in a notebook. But with these manual systems, there's the problem of retrieving the information quickly in a useful format.

Hospital and medical office computer systems may collect this information, but the design of these systems is biased toward business uses, so the clinical information is usually scanty and imprecise. Furthermore, with an institutional system, the physician has no control over information for his own use. Hence, the personal computer is a good tool for a doctor's recordkeeping, since it can be adapted to individual needs and can greatly speed and

simplify the task of keeping and using accurate information.

## The E-Book

What kind of information might a physician need to record? This would vary for each specialty but would usually include the patient's name, an identification number, age, sex, race, when he or she was seen, and the resulting diagnoses and procedures. This set of information is collected in what is called an encounter log or an "E-Book."

The E-Book is an example of a database—a set of data organized in a useful way—and there are many ways to implement it on a computer system. When I was a resident, I wrote a BASIC program to handle the information in the way that I wished. This was my first experience with programming the PC.

However, writing such a program can be time-consuming and requires a great deal of attention to detail, so I don't recommend that all doctors do this. Starting from scratch to solve a problem is a common, expensive mistake made by many new computer users. There are now many software packages available (such as *dBase II*, *EasyFiler*, *PC-File*, and integrated programs that combine spreadsheets, word processors, and database functions) that can take a lot of the drudg-

ery out of writing a database program.

### Designing the Database

Before designing the format for a database, think about how the information will be retrieved and used. This will determine what information should be saved and the form in which it should be organized. You want to get back lists and counts of the procedures, diagnoses, types of patients

we have seen, and the places where they were seen. You also want to be able to define subsets of these lists—for example, the diagnoses of patients seen at a certain hospital during a certain time period.

Remember that the most difficult aspect of using a database is entering the information in the computer files. For efficiency, you want to record only the data necessary for the intended use. Further-

more, the information must be entered in a way that will insure accuracy. Using a program that will screen entries to the database is one means toward this end.

Another useful device is a coding system that provides a shorthand way of identifying items in a given field. Common examples are using "M" for male and "F" for female in the field for sex, or using the numbers 1 through 12 to stand for the months of the year. These codes save considerable amounts of space in the computer records and allow for easy retrieval.

I have already listed some of the fields that would be included in the record of each session with a patient, such as the patient's name, the date, demographic information, and the diagnoses. Now I'll consider some of the field items in detail.

In the fields used to identify the patient, a problem arises because many people have the same name. Therefore, it is a good idea to provide another identification field using some sort of ID number, called a unit or patient number. This may be assigned when the patient first visits an institution for care, or it may simply be the patient's social security number. If the E-Book database will be used to prepare case histories for your certification, the patient number can be used to list all your contacts with that patient over time.

Recording a patient's birthdate is more useful than recording the age, since the birthdate helps to consistently identify an individual patient; you can always calculate age from the birthdate.

The next piece of information is when the patient was seen. For a patient seen in a clinic, one field for the date of the visit is all that is needed, but for a hospital patient, you should record the date of admission and the date of discharge, as well. By recording these dates, you can later produce a list of all the patients seen during a period of time or determine the average length of stay for your hospital patients.

You might also need to keep track of

# PROGRAMMER'S GUIDE TO CP/M

EDITED BY SOL LIBES

Here's an important collection of CP/M insights that you'll never find in any CP/M manual. CP/M is the most popular microcomputer DOS in use today, and this widespread use has generated many innovative techniques and enhancements of CP/M. *Programmer's Guide to CP/M* tells you what these enhancements are and how to put them to use, how to get around apparent limitations of a CP/M system and why CP/M is far more versatile than you might have imagined. Every article in *Programmer's Guide to CP/M* originally appeared in *MICROSYSTEMS* between

January 1980 and February 1982. Except for this collection, these articles are now unavailable! *Programmer's Guide to CP/M* gives you an in-depth look at CP/M from the viewpoint of the programmer—the individual who creates the software that interfaces directly with CP/M, or who is installing CP/M on systems for which configurations do not already exist.

Contents include "An Introduction to CP/M," "The CP/M Connection," "CP/M Software Reviews," "CP/M Utilities & Enhancement," "CP/M 86" and "CP/M Software Directories." 200 pages, \$12.95.

# GRAPHICS TO GO

Take Your CRT Graphics To Your Next Meeting.  
Use DATACAM™ For Instant Color Photos And Slides From CRT Monitors.

Getting your CRT graphics to a meeting shouldn't be time consuming, expensive or difficult to accomplish.

DATACAM™ 35 and DATACAM™ I meet the fast rising demand for photographic records of images from CRT monitors for reference and presentations. With a DATACAM™ color recording camera, your display information can be communicated economically, in an instant.

A DATACAM™ is extremely easy to use. All you have to do is place a DATACAM™ on any CRT monitor, press a button to shoot and within minutes have the finished print or slide.

DATACAM™ is portable, too.

A DATACAM™ is not hard-wired to a fixed single video system and does not require customizing for a particular video display screen. Anyone can use it from engineers, designers, medical professionals, educators, to business professionals.

CIRCLE 541 ON READER SERVICE CARD

DATACAM™ 35 comes in two monitor sizes—12"/13" and 19"/21" to fit almost every available screen size. It is perfect for photographically recording CRT graphics in a slide format. When you need an instant audiovisual presentation, your DATACAM™ 35, loaded with Polachrome 35mm film will produce color slides which can be processed on an AutoProcessor and mounted within a matter of minutes. Or, you can use conventional 35mm color film and send it out for developing.

DATACAM™ I is also available in the same sizes as DATACAM™ 35. It is ideal for making instant hard copy 3 x 4 photographic prints for reference data, notebook presentations or file information. DATACAM™ I can be used with Kodak Instant Color Film.

## MEDICINE

where each patient was seen. For example, a private practitioner would want to know whether the patient was seen in the office, in one of the hospitals to which the practitioner admits patients, in an emergency room, or at the patient's home. A resident in training who spends time working on several different services or specialties would want to record which specialty was involved.

The lists of diagnoses and the procedures that were performed while taking care of the patient are the most important information in the E-Book. The list of diagnoses is most useful for you to review your experiences. It does not need to be an all-inclusive list of every problem each patient has. Instead, the list can be more selective, focusing on those cases that were your significant patient care experiences. A specialist would record only those problems unique to the specialty and the generalist would record only the problems actually dealt with during that visit with the patient. In general, five fields in the record for recording diagnoses should be ample space for describing any patient encounter.

A wide selection of standardized and uniform coding systems for diagnoses have been published and are available in medical libraries. In the field of primary care, the most commonly used systems are the International Classification of Health Problems in Primary Care (ICHPPC) and the International Classification of Diseases—Amended (ICDA). Most specialties have established lists with more precise diagnoses categories in their subject area. You might find it best to develop your own list and perhaps refer to one of the standard systems as an outline.

Code numbers save time and space that would be used to type out the entire text of each diagnosis. They also result in standard names, which allow easy and complete retrieval.

The procedures you perform can be recorded in the same manner as the diagnoses. A coding system is helpful here as well. One standard coding system is called

the Common Procedural Terminology (CPT), but a self-made list might be handier since this standard list is quite long. Fields for three procedures in each record should be sufficient.

Another field that you will probably want is one for comments. There are often, some interesting features about a given case that aren't common enough to have been included in the codes for diag-

noses and procedures. Since these remarks can be succinct, this field would not have to be longer than 40 or 50 characters.

A physician who keeps a list of his patient care experiences on a microcomputer has a simple but potentially valuable database. In a future issue of *PC Magazine*, I will explain how you can use *PC-File*, an inexpensive database program, to implement a physician's E-Book. ■

# Maxi-Value From A Mini-Ledger

An efficient accounting program rides to the rescue of small businesses. It helps them in tracking and organizing expenses and saves the cost of a general-ledger program.

For owners of small businesses who would like to do bookkeeping on their microcomputers, there has traditionally been only one option—buying a large general-ledger program. But, for the small business, this option can be expensive. The large general-ledger programs often require a great deal of expensive hardware, particularly hard disks, which many small offices may not have.

To the rescue comes a program called *Mini-Ledger* (Version 1.8) from Paradigm Consultants, Inc., in Fremont, California. *Mini-Ledger*, as emphasized in the program manual, has no pretensions to being a full general-ledger program. It's designed to do two things:

- Organize your records in a format that will expedite your accountant's job.
- Track your expenses and income on a continuing basis to enable you to make intelligent decisions about your business.

*Mini-Ledger* initially presents you with

**Mini-Ledger** (version 1.8)  
Paradigm Consultants, Inc.  
39243 Liberty Street  
Fremont, CA 94538  
(415) 796-0543

List Price: \$150

**Requires:** 64K RAM, 132-column printer recommended.

CIRCLE 683 ON READER SERVICE CARD

a menu of over 30 different monitors from which to choose. If yours appears on the menu, a single keystroke, in most cases, will set up the program for your computer. Printer setup is similar.

Once the program has been set up, it is easy to use because it's straightforward and menu-oriented. The first step is to enter expenses and income. After each entry, the cursor moves automatically to the next position. Editing entries is accomplished with either control characters or the arrow keys.

## Chart of Accounts

When you are finished with the demonstration files and ready to begin setting up your chart of accounts, you may do so using a separate item on the program's main menu, or you can build the chart of accounts as you enter data.

You are allowed a total combination of 99 accounts and subaccounts. For example, if the number 1234 is an office supplies account, you can write subcodes such as 01-1234 to indicate a particular vendor with whom you do a lot of business. Your accountant need only be concerned that you have charged a certain sum to account 1234 because *Mini-Ledger* will total up expenditures by account number upon request. However, you can get data that will break out all information by subcodes, as well as by accounts.

You will most likely want to create a basic chart of accounts in consultation with your accountant. Once you've done so, adding such things as subcodes can quickly be done from the main input routines. You are not obliged to exit to another routine to add one item, which is one of the most appealing aspects of this program. Typically, the most tedious task associated with computing is inputting data. *Mini-Ledger's* input screen is so thoughtful that working with the program is a pleasure. The next step after indicating that you wish to enter expense and income information is to assign the first file name for the system. You are allowed a total of 50 files in 1 year; for instance, you could create four files in the month of January, four in the month of February, and so on, with two left over.

The next step is to key in the date, which is automatically formatted for you, and then indicate one of four transaction types by pressing Deposit, Payment, Void, and Credit, respectively.

## Checking Your Checks

The cursor then automatically moves to the check number column. If you are working with sequentially numbered checks, and you press the Return key, the program will automatically increment the check number by one. If you enter a check number that is out of sequence with the

## BUSINESS

one that immediately precedes it, the program will bring this to your attention but will not force you to back up—a clever device to keep you from losing track.

The program calls for a description of the transaction up to 20 characters long, followed by the subcode and a main code. When you enter the codes, the name of the

account appears at the top of the screen as a verification of your entry. If you enter a code-subcode combination that is not on the chart of accounts, the program will ask if you want to use the code anyway. If you do, it then asks you if you wish to place it in the chart of accounts. Normally, you will answer yes, in which case the program asks you for a 35-character description of the item for the chart. Once you've taken care of this housekeeping, you make your final entry, a dollar figure. Incidentally, pressing the Tab key will duplicate items entered on the line immediately above, which saves typing of repeated entries.

At any time you can move the cursor up and down on the screen. The screen will automatically reformat itself for you. You can backtrack and insert an entry that you might have overlooked, while the program continuously updates your running balance, shown on the right edge of the screen.

### Output

*Mini-Ledger* provides data for both the business executive and the accountant. It offers a running report of the entries as they were entered on the screen—unsorted and in the original order. It can print from the first file in the system to the last or pick any group of files in between. Fiscal year users can go "backwards," starting with October and ending in April. In addition, an elegant sort-and-accumulate routine lets you pick any group of files that you wish, sort them chronologically, total all the codes and/or subcodes (if you wish), and print them out as a report.

Incidentally, all the printouts that *Mini-Ledger* generates can be transferred to a disk file where they can be read by any word processor capable of reading a simple ASCII file. This permits a user to read the files and lift out information for letters or financial reports he is composing.

In addition, the program will furnish an alphabetized or numerically sorted chart of accounts and will accumulate the totals for the chart of accounts for any period of time

# SPOKEN HERE

We are Bristol Information Systems, and since 1971 we have been writing accounting software for large companies using minicomputers. Recently, we began putting these powerful systems on the new microcomputers. The result is "BUSINESS"—software packages that MEAN BUSINESS.

With "BUSINESS" software your business can have all the data processing power that major corporations have—because you're getting the SAME software, not scaled-down versions. Every "BUSINESS" system is comprehensive enough to offer all the features any business could want. Yet with our System Configurator, every "BUSINESS" system is flexible enough to let YOU select which features you want to use. So you can still do business your way—only better!

Before you buy business software... find out what "BUSINESS" has to offer. You will be truly amazed.

# Take Your Computer's Commands And Put Them Where They Belong. On Your Keyboard.

PC-DocuMate™ is a documentation template that fits the keyboard of your IBM PC. So the information you want is where you need it. PC-DocuMate templates are professionally designed, logically organized and comprehensive. Each template is printed on both sides on durable, non-glare polystyrene and is color-matched to your PC keyboard.

## PC-DocuMates now available for each of the following:

- DOS/BASIC 1.1 (as shown)
- DOS/BASIC 2.0
- CUSTOM "do-it-yourself" template (with pen & eraser)
- WORDSTAR™
- dBASE II™
- 1-2-3™
- MultiMate™
- MULTIPLAN™ 1.06
- SuperCalc™
- VisiCalc™
- VOLKSWRITER™
- EASYWRITER II™
- MULTIPLAN™ 1.00

## Available soon:

- PeachText 5000™
- CONTEXT MBA™
- KNOWLEDGE MAN™
- ELECTRIC PENCIL-PC™

**EACH TEMPLATE IS ONLY \$14.95** (includes shipping)

**No-Risk, Moneyback Offer:** If you are not completely satisfied, return your PC-DocuMate template to us (undamaged) within 10 days for a full refund.

Please send personal check, money order, or credit card information. Foreign orders add \$5.00 (except Canada). No COD's please. (NC residents add 4% sales tax.) For more information, call 919/787-7703. Dealer inquiries invited.

Raleigh, N. C. 27619

We have developed an 8" diskette system called "THE FILE CONNECTION" that can be used to exchange source, data, and word processing files between the IBM PC and hundreds of other computer systems. We use a modified IBM diskette controller card to attach either 1 or 2 external 8" drives to the IBM PC. Our utilities work with all IBM models including the 3741, 5120, S/1, S/34, S/38, S/370, 43XX, and Displaywriter. Other systems include DEC, NCR, TRS80, Univac, Burroughs, Honeywell, and CP/M.

Our programs provide automatic format identification and except diskettes with 1 or 2 sides, single or double density, and 128, 256, 512, or 1024 bytes/sector. Source file reformatting and ASCII-EBCDIC conversion is included. The diskette can also be used as a 1.2 Mbyte or 320 Kbyte QDS drive.

The complete system price including TANCOON 848-2, enclosure, cable, and basic utility programs is \$1295 for one drive and \$1995 for two drives. For users who want to use their own drives, the basic utility programs and documentation are available for \$695. Payment is by check or CDD with delivery within 10 days.

## BUSINESS

you specify. In other words, you can print a quarterly report that will total all items by chart-of-account numbers or by the subcode numbers. This option is valuable for the accountant, who may be using his own computer at this point and may need some control figures in order to make comparisons with his office computer.

*Mini-Ledger* also generates a year-to-date report in matrix form of all codes and provides the dollar figures associated with them.

### Error Handling

*Mini-Ledger* has excellent error-catching capabilities. I was unable to make an entry that fouled up the system. The program rejects invalid dates such as 12/32/84. If you try to give it a transaction code other than the four it will accept, it gives you an error message explaining what it requires. If you have a habit of typing the letter I instead of the number 1, it will beep at you.

After several warnings, the program will let you put in an account number that is not on the chart of accounts, but the dollar amount will be assigned to UN-CODED on the printouts at a later time. The entry will be shown to you separately on the printout and, in case it was a mistake, you can go back and correct it.

*Mini-Ledger* does not have the ability to instruct the computer to write the checks, but I didn't find this feature particularly useful. My experience as a consultant has taught me that once the novelty of having the computer write the checks has worn off, most small businesses go back to writing them by hand. If the business is large enough to justify the complications of computer-generated checks, it is probably too large to use *Mini-Ledger*.

Another feature this program lacks is the ability to generate true profit-and-loss and financial statements. The printouts it generates are adequate enough to give you an excellent overview of your financial operation. And, if you want more complex statements, you will have to go to your accountant anyway.

Nonetheless, *Mini-Ledger* is a fine program. It is easy to use, and its input method makes it nearly impossible for the program to choke on data. And giving the

user the option of adding new chart-of-account codes on the fly is a particularly practical feature. *Mini-Ledger's* authors must have watched people work. ■

Because our new Micro Cookbook makes it easier than ever for you to bake, broil, roast and fry 'em.

Not only by giving you more than 150 recipes—which it does. But by simplifying the whole art of cooking. You see, Micro Cookbook eliminates messy, confusing recipe files. Instead you simply insert our program into your computer and select any recipe your heart, or stomach, desires. Ask for a recipe by name, ingredients or category.

The recipe you select can be one of the mouth-watering dishes we include—or you can create a diskette of your own favorites. And you can constantly modify your selections, adding new triumphs and removing recipes that, ah, bomb.

These, and Micro Cookbook's other features, will make your life in the kitchen a breeze.

With this in mind, is it any wonder Micro Cookbook makes this guy so nervous?

Versions available for Apple II+ (IIc) and IIcx (IIx) and IBM PC (iATK, PC (iATK). The cost \$49.95. Advanced Functions Package requires Micro Cookbook II for IBM PC (iATK, PC (iATK) or MS-DOS and Apple II+ (IIc) and IIcx (IIx). The cost \$39.95. Soup & Salad, Appetizers, or Desserts options, \$12 each. Check your dealer first. MS-DOS check, phone or mail order accepted. Please specify computer and add \$2 handling.

# New On The Market

## HARDWARE

### BabyTalk

A Z-80 microprocessor-based multifunction board capable of handling complex communications and data management tasks as background operations, freeing the user's system for concurrent use in other applications. Dual-ported, 64K RAM on the board is accessible to both the board's Z-80 processor and the host system's 8088 processor. The board's basic configuration includes such features as CP/M-80 software compatibility (permitting the user to run CP/M-80 programs), print spooling, and an on-board 300/600/1200 baud modem. The modem has auto-dial/auto-answer capabilities, and is compatible with Bell 103, 202, and CCITT V.21 and V.23 protocols.

Software utilities included with the basic board include a battery-backed clock/calendar, and *Keyfix*, for redefining function keys.

Software options available permit the board to emulate terminals from a range of manufacturers, and to support asynchronous and bisynchronous communications via Bisync 3270, SNA 3270, 2780/3780, HASP, and TTY protocols. Also available as an option is a smart modem emulator package, and a package for accessing Telex/TWX via Western Union's EASY-LINK network.

(List Price: Basic Package \$895)

Microlog, Inc.  
222 Rte. 59  
Suffern, NY 10901  
(914) 368-0353

CIRCLE 793 ON READER SERVICE CARD

### DVORAK Keyboard

A keyboard laid out in the DVORAK arrangement, instead of the standard QWERTY layout. The DVORAK arrangement is claimed to have increased speed, comfort, and reduced error rate, as it places the most frequently used keys in the center of the board, beneath a user's strongest fingers. The home row keys of the DVORAK layout can configure up to 3,000 word combinations, as opposed to 100 combinations for the QWERTY home row.

The keyboard, designated model KB-5150D, is directly plug-compatible with the user's system, and offers additional features such as familiar placement of the shift, escape, and control keys, a convenient enter key next to the numeric keypad, and L.E.D. indicators on the Caps Lock and Num

Lock keys.

CIRCLE 792 ON READER SERVICE CARD

### Hard Disk Drives

A line of 5 1/4-inch hard disk drives available in either master or slave drive configurations. The units are provided with all needed hardware and software, including a disk controller board that plugs into a slot within a user's system, and software allowing the user to define the volumes that suit a particular application when formatting the drive initially.

The hard disks are offered with seven different memory storage capacities, ranging from six megabytes to 140 megabytes. Also available from the manufacturer is a 1/4-inch streaming tape backup drive that plugs directly into the hard disk drive, instead of into the user's system.

(List Price: \$2,395-\$9,995, depending upon storage capacity; Streaming Tape Backup \$2,395)

## HARDWARE

Micro Plan II, Laboratory Computer Systems, Inc.

### Micro Plan II Image Analysis System

An image analyzer/digital planimeter, consisting of a tablet with an 11 x 11 inch active tracing area with a separate menu area for controlling tracing modes, measurements, and printed results. The on-board microprocessor can calculate length, area, and other morphometric measurements from data which is traced on the digitizing tablet. Individual and summed sets of measured values are printed on the alphanumeric printer included in the system, along with statistical data such as means and standard deviations.

The image analysis system has two serial RS-232 ports, allowing data to be transferred to other comput-

ers, modems or other serial devices for data storage and later analysis. Results from tracings are printed in millimeters or user-defined units based on tablet resolution of 10 lines per millimeter.

Tracing modes and scaling factors are entered using the menu area on the tablet.

The Micro Plan II Image Analysis System includes the tablet with two RS-232 ports, a pen or five-button cursor, an enclosed power supply, and an 80-column dot matrix printer.

### Compu-Music CMU-800R

A multi-voice synthesizer and software-based music programming system. The Compu-Music CMU-800R hardware can create piano, bass, and drum sounds. It connects to the user's system via a plug-in interface card that uses one slot. The unit then connects to any amplifier or stereo system for audio performance. The device consists of a six-voice music synthesizer, a seven-voice drum synthesizer, a clock for controlling tempo, a mixer for combining different sounds, eight outputs for connecting external synthesizers, and audio outputs for monitoring sound.

The software provided with the unit allows the user

to enter, arrange, and play music through the CMU-800R, and to store and retrieve music on diskettes, using keyboard commands. (List Price: \$495; Software and interface card \$70)

### Bytewriter

A daisy wheel printer/type-writer with parallel interface. The unit is based upon the Olivetti Praxis 30 typewriter, and can produce letter-quality printouts at 8-12 characters per second. The Bytewriter also features software-selectable pitches of 10, 12, or 15 characters per inch. Disconnected from a user's system, the Bytewriter becomes a stand-alone typewriter.

The interface is available in kit form, and can be used with Praxis 35 and 40 typewriters as well as the 30. It fits entirely within the typewriter, and provides a Centronics-type parallel port.

(List Price: Bytewriter \$495; Interface kit alone \$165)

## HARDWARE

### PC PROBE

A hardware/software package providing programmers with a debugging tool for software development. The device consists of a printed circuit card that fits into a slot in the user's system; a cable and probe that fits into the 8088 IC socket; and debugging software on diskette. PC PROBE software, including symbol and macro command tables, is contained on 64K of on-board RAM that is protected against alterations by software under development.

The PROBE has 24 types of real-time breakpoints that can implement eight breakpoints at a time. Once a breakpoint has been reached, the device can execute a real-time trace of the previous 1024 instructions, eliminating slow step-and-display sequences. In addition, the trace feature allows up to eight channels of external information to be traced as a typical logical analyzer function.

Symbolic debugging capabilities allows a programmer to use symbols rather than absolute values in all program commands. To try out program changes before reediting and recompiling, program patching can be inserted into software with high-level language commands, or on a line-assembler level.

For system initialization or repetitive sequences of debugger commands, the PROBE user can define a unique set of macro commands that can be saved to disk. In the event a program crashes to a level necessitating system reset, the device allows crash recovery by way of two external keys, regardless of the state of the system.

PC PROBE also contains a serial interface, allowing the use of an external display and keyboard without disturbing the user's primary

display.

(List Price: \$1,895)

### Info-Mate 212A

A Bell 212A-type modem with the capability of storing 52 32-digit telephone numbers within its memory. The modem automatically adapts to the user's communications parameters,

and incorporates features such as auto-dial, auto-answer, auto-speed select of 300 or 1200 baud, and auto-parity select.

All commands are entered from the user's system over the RS-232 interface, using ASCII characters. Commands are single level, eliminating the need to sequence the device through several command states or menus to perform such functions as automatic dialing or disconnect.

The unit's auto-dialing function can be commanded to blind dial using pulse or tone dialing or a combination of the two. It also electronically detects call progress tones as dial, busy, ring-back, modem answer tone, and the human voice. The built-in memory stores up to 52 32-digit phone numbers or messages for database access. It also provides advanced dialing commands—dial immediate, dial last number, dial until answered, dial alternative number, and dial from memory.

### CONO-COLOR Adapter

A graphics board equipped with 128K of memory. The board is compatible with the IBM Color/Graphics adapter in both text and graphics mode, and can run all software developed for the IBM board without modification.

In addition to the text and graphics mode, the CONO-COLOR Adapter includes alternate hi res modes, capable of resolutions of 640 x 400 and 512x512 pixels.

At any resolution, the user may select a palette of 16 colors for simultaneous display from a spectrum of 256 possible colors. A color map lets the user modify the palette for instantaneous color changes and special effects, including motion.

The CONO-COLOR Adapter also features a light pen interface with resolution of one pixel, multiple video display pages, wraparound panning, hardware scrolling, dual character fonts, high speed erase, and outputs to digital and analog RGB and composite video monitors. BASIC graphics functions are supported.

The board is packaged with the *Conographic Input/Output System (CIOS)* software, containing all of the drivers for the adapter, and a set of assembly language graphics primitives. *CIOS* also includes a complement of multi-color paint rou-

tines, with FILL TO, FILL ONLY, and windowing options.

(List Price: \$895)

### PM-300 Modem with COMPAC Software

An internally mounted 300-baud modem compatible with Bell-103. The unit has auto answer function with a selectable number of rings before pick-up, and dial-out function with Touch-Tone or pulse dialing. The unit does not require an additional RS-232 card or additional connectors.

The modem is provided with *COMPAC* software, a videotext program to support asynchronous communications. It has auto logon, file download and upload capabilities under error correcting protocol. Data received may be entered into a disk file or buffer, and contents may be displayed, printed or transmitted.

(List Price: \$249; *COMPAC* alone \$69.95)

**Requires:** *COMPAC* Program: 64K, one disk drive, PC-DOS.

SAM + Centronics, Black Box Catalog

### BLACK BOX SAM + Centronics

A break-out box, providing direct access to all active signal and ground leads of the Centronics parallel interface. The unit allows users to reconfigure, patch, monitor, and test all active interface leads.

Permanently monitored leads include: Data Strobe, Bits 1 through 8, Acknowledge, Busy, Paper Empty, Select, OSCXT, Input Prime, and Fault. Leads that are not permanently monitored may be tested for ground presence and pulse

by patching into four square L.E.D.s. Negative and positive pulse detection circuits are included for locating and identifying intermittent pulses. The unit is also equipped with two inverters that allows the user to invert strobe or acknowledge lines.

(List Price: \$225)

## SD900 SimPaLink

A Programmable Array Logic (PAL) programmer, allowing users to develop PAL design specifications for AMD, Monolithic Memories, National, and T.I. 20-pin PALs. The SimPaLink includes PALASM, software which accepts a Boolean equation and compiles it into an output to drive the programmer.

The device uses an RS-232 25-pin connector and incorporates a 6802 microprocessor. It can operate at terminal rates from 300 to 9600 baud, and at printer rates of 300 and 9600 baud. The unit includes an AC power line adapter. (List Price: \$500)

## PC 300 Bar Code Reader

A bar code reader incorporating an integral microprocessor, eliminating the need for external controlling software. The PC 300 connects in series with the keyboard cable, deriving its operating power from the user's system without an external power supply. The device does not affect keyboard operation. Bar code data appears to a user's system as keyboard input.

The PC 300 can read

CODABAR and Code 39 labels at scanning rates from three inches to 30 inches per second at standard code densities, using its hand-held infrared scanning wand. The wand's scanning aperture is .006-inch. (List Price: \$695)

## PowerPad & Leonardo's Library

A 12 x 12 inch digitizing tablet designed specifically as an input device for children. The PowerPad tablet utilizes multiple point contact technology which responds to direct hand contact with the surface. A series of Mylar overlays, when used with accompanying software, provides the device with a range of applications, including using the tablet as an artist's canvas, a piano keyboard, a game board, and a programming aid.

*Leonardo's Library* is a series of specially designed software packages for the PowerPad, in six subject areas: music, mathematics, visual arts, science, language arts, and social studies. Available packages include: *Leo's 'Lectric Paint Brush*, an electronic sketch pad for touch drawing in a variety of colors; *MicroMaestro*, for

playing and learning music, with notes, scales, and chords reproduced on the user's display; and *PowerPad Programming Kit*, for teaching simplified programming in BASIC or assembly language. The *Library* is written in LOGO, using teaching techniques developed by international educators.

(List Price: *PowerPad* \$99.95; *Leonardo's Library* programs \$24.95 to \$49.95)

## SOFTWARE

### PC/MOS

An operating system providing multi-user and multi-tasking capabilities, designed for use with *The Retailer* point-of-sale/inventory control/business accounting program for retail businesses. *PC/MOS* (an acronym for *Personal Computer/Multi-User Operating System*) can support up to 16 workstations when used with an expansion board providing the user with a sufficient number of communications ports. The operating system's file management routines support Indexed Sequential Access Method (ISAM) files, relative and sequential file

structures, and can automatically handle record lockout for ISAM and relative record files. *PC-MOS* includes a BASIC compiler and run-time module, a First-In-First-Out print spooler, and a text editor. (List Price: \$300)

**Requires:** 128K, Hard Disk & one disk drive, asynch serial port(s).

### Preventive Maintenance

A menu-driven, 16-function program allowing a user to establish and maintain equipment preventive maintenance schedules. The program can be used to set up equipment inventories with descriptive and accounting information. Printed reports include weekly job and future work schedules and inventory lists. The program also allows the creation of historical data files on preventive maintenance performed.

(List Price: \$399)  
**Requires:** 64K, one disk drive, PC-DOS, monitor, printer.

### Dollars & Sense

A family financial management program, featuring ease of use and a tutorial diskette. The program establishes and maintains a personalized financial database, useful in maintaining family budgets, keeping records of income and expenses, and in providing information

needed to prepare income taxes. *Dollars & Sense* allows a user to prepare graphs and reports which can be displayed or printed in color with appropriate hardware.

The program can be used on an individual level to reconcile checkbooks, manage investments such as real property or stock portfolios, or to analyze personal expenses. Professionally, *Dollar & Sense* allows a user to calculate net worth, manage budgets for a small business, or project business profit or loss. In all, the user can identify up to 12 accounts of five types: assets, liabilities, expenses, income, and checking.

The *Dollars & Sense* package includes a demonstration/tutorial diskette, the program diskette, and a user's manual  
(List Price: \$165).

**Requires:** 64K one disk drive, PC-DOS.

### Securities Lending System

A program to control securities lending operations for brokers, option houses, arbitrageurs, corporations, and similar organizations and individuals. The *Securities*

*Lending System* is written in COBOL, and provides interactive control over lending and borrowing of all classes of securities, debt and equity.

In addition to the basic program, three optional modules are available, for government lending, extended exposure reporting, and accounting interfacing.

An eight-page management summary of the software is available upon request from the producers of the software.

(List Price: *Perpetual Lease Basis: \$22,500 without hardware; Monthly Rental Basis: \$1,100 without hardware*)

**Requires:** 256K, 10 MB Hard Disk, PC-DOS 2.0, monitor, 200 cps printer, 4800 baud bisynch communications modem.

### Managing Partner

A law office management program that can handle timekeeping, expense and receipt recording, statement generation, casefile data updating, docket control, and calendaring. *Managing Partner* is menu-driven, and utilizes full screen data entry forms. Input is automatically checked for errors and is cross-referenced to other data files as needed. The program makes use of monitor attributes such as reverse video, half-intensity and blinking characters.

*Managing Partner* is written using a dBASE II re-

lational structure. Files are created with multiple indices, speeding access to data, and each file can contain up to 65,535 records.

(List Price: \$2,495)

**Requires:** 128K, one disk drive, PC-DOS or CP/M-86.

### Small Fortune Auto-Ledger

A general ledger program

designed for small businesses, featuring a Reports Module allowing a user to generate up to 20 custom reports. The program's Double-Account Entry Module is self-balancing, and the Single-Account Entry Module allows transactions to be split as many ways as necessary. Data entry screens feature immediate account verification and current balances.

The program also includes an Audit Module, allowing past activities to be viewed, selected in any or all of 3 ways: past transactions may be dis-

played which were entered between certain dates; which contain a certain string in their descriptions; or which pertain to a certain account. The module can also print or display all transactions for a given month in the general ledger format.

(List Price: Version 1.11 \$200; Version 1.1C \$250)

**Requires:** 64K (Ver. 1.11) or 96K (Ver. 1.1C), one disk drive, PC-DOS.

To Order Call Toll Free **1-800-634-6766**  
Information & Inquiries 1-702-369-5523 • We accept VISA and MasterCard

ORDERING INFORMATION AND TERMS: For Fast Delivery send cash or check, money orders or direct bank wire transfers. Personal and company checks allow 3 weeks to clear. Charges for C.O.D. orders are \$3.00 minimum or 1% for orders over \$300. School purchase orders welcomed. Prices reflect a cash discount only and are subject to change without notice. Please enclose your phone number with any orders. SHIPPING — Software \$3.00 minimum. SHIPPING — Hardware (Please call) \$19.99 minimum. APO & FPO orders: \$10 minimum and 15% of all orders over \$100. Nevada residents add 5.34% sales tax. All goods are new and include factory warranty. Due to our low prices, all sales are final. All returns must be accompanied by a return authorization number. Call 702-369-5523 to obtain one before returning goods for replacement.

## SOFTWARE

## Menu!

A program that automatically sorts all diskette files and programs into a single system, making it possible to manipulate files without typing a file name. Instead, files or programs are selected by number from a main menu. The program copies, erases, renames, types, restores, compares, and protects files. In addition, it can test diskettes and determine space available on a diskette.

*Menu!* can also provide the user with password protection to secure sensitive data.

**(List Price: \$149)**

**Requires:** 64K, two disk drives, PC-DOS or CP/M-86.

## Computing!

2519 Greenwich  
San Francisco, CA 94123  
(415) 567-1634

CIRCLE 752 ON READER SERVICE CARD

## Teleminster

A communications program that allows a user to access and retrieve data from the Dow Jones News/Retrieval Service automatically in unattended operation. The program will connect with the commercial database, retrieve selected data, load it onto a diskette, and disconnect from the service. In addition, it can print the news and stock quotes.

With the optional *Tele-Pak I* utility, *Teleminster*

**CADET, AVELL, Inc.**

can also transfer retrieved data directly into such applications programs as the *Dow Jones Market Manager*, the *Dow Jones Market Analyzer*, and to spreadsheet programs such as *VisiCalc*, *1-2-3*, and *Multiplan*. *TelePak 1* can also transfer *Dow Jones Market Manager* data to *Dow Jones Market Analyzer* files, and vice versa. This allows users with both software packages to access the *News/Retrieval* service only once to obtain identical data in each program.

(List Price: Teleminster  
\$195; Tele-Pak 1 \$30 addi-  
tional)

**Requires:** 128K, two disk drives, serial port, Hayes Smartmodem (300 or 1200 bps), printer.

Teleware Inc.

## SevenWare

**SevenWare**  
A user familiarization and programming aid for use with the Intel 8087 math processing chip. *SevenWare* is composed of three files, titled *Test87*, *Intro87*, and *MacLib87*.

*Test87* verifies the correct installation of the 8087 chip in the user's system. Optional advisory screens provide an overview of the chip's instruction set during testing.

**Intro87** is an interactive demonstration of the chip's capabilities. It illustrates the improved precision and range of the 8087's intrinsic floating-point format, and provides comparison processing versus the 8088 chip in side-by-side calculations, using user-supplied input.

*MacLib87* is a macro library which extends the IBM Macro Assembler to support the 8087 instruction

set. Intel standard mnemonics are employed, which are fully supported by PC-DOS 2.0's "Debug" utility.

(List Price: \$79; \$279 with an 8087 chip)

**SolveWare**

P.O. Box 1246

Redondo Beach, CA 90278

CIRCLE 763 ON READER SERVICE CARD

**CADET**

An instrument flight simulator program. The user configures the program by entering FAA navigation facilities for any location. Data is saved on disk for future use, and up to five such files, each with individually programmable variables such as winds, can be saved for different flights and instrument approaches.

**CADET** simulates instrument flights, approaches, and landings in real time. Graphics feature an IFR instrument panel, an XY plot of approaches, and a runway display. Panel indicators include 9-channel RNAV, dual VORS, DME, ADF, ILS, Markers, and a stack of keyboard-tuned Nav receivers.

(List Price: Standard: \$49;  
Advanced: \$69)

**Requires:** 64K, one disk drive, PC-DOS.

## How to teach your kids about the IBM PC.

Now you can teach your children how to use your PC without bogging them down in the user manual...without spending hours demonstrating the simplest functions...and without fear that they'll break your PC because they don't know how to use it properly.

You can do it with the PC edition of *Computers for Kids* — a BASIC learning text whose Sinclair, Apple, and Atari editions have already introduced thousands of children and parents to computers.

*Computers for Kids* teaches children age 8 and older to write their own programs in less than an hour—without the necessity

for previous knowledge of algebra, variables, or computers. And there's a special section that keeps parents and teachers on the same successful command path.

Starting off with an easy-to-understand explanation of how to use the IBM PC, your kids will progress quickly to flow charts and simple print programs...to loops, graphics, and other programming concepts that show the young user how to make the PC do exactly what he wants—in non-technical language that makes life easier for both of you.

Takes it from Donald T. Piele, Professor of Mathematics at the University of Wisconsin (Parkside): "*Computers for Kids* is the best book available for introducing children to the IBM PC. And it's a perfect tool for adults who are learning about computers and programming with their children."

So do your children a favor. Do yourself a favor. Order the PC edition of *Computers for Kids* today!

Here are just a few of the useful and exciting topics covered in *Computers for Kids*:

- What is a computer?
- Flowcharting
- Running the IBM PC
- Getting Ready to Program
- PRINT and VARIABLES
- GOTO, INPUT and RND
- IF-THEN and FOR-NEXT
- Graphics Programs
- Sample Programs
- Glossary of Statements and Commands
- Notes for Teachers and Parents

## SOFTWARE

### DBPlus

A utility program for *dBASE II* files, providing users with the ability to compress/decompress data, sort, and transform files. The sort facility operates faster than using *dBASE II*'s index command or sort command when sorting on a single field. *DBPlus* also allows multiple level sorting, up to 32 fields in one pass.

The transform feature of *DBPlus* allows data file structure modifications without extensive reprogramming, and can convert files to a format compatible with *WordStar/MailMerge*. (List Price: \$125)

**Requires:** 64K, one disk drive, PC-DOS, *dBASE-II*. HumanSoft

661 Massachusetts Ave.  
Arlington, MA 02174  
(617) 641-1880

CIRCLE 733 ON READER  
SERVICE CARD

### One-Key Step Scroll

An enhancement subroutine for the BASIC Program Editor that can generate and execute the LIST command with a single keystroke.

Successive entries will step the listing forward, backward, or re-LIST the same range of BASIC program lines in one 80 or two 40 column windows. The process is unaffected by running or editing the user's

application. In users' systems with both monochrome and color monitors, different groups of lines can be directed to either screen with a single keystroke. All step parameters are variables which can be set for either window from a menu.

Other features from the parameter menu are: a disk file directory with sort and size, a variable listing with last run values, a disk file read and RAM memory peek with bi-directional line or page scroll, and an enhanced RENUM routine.

The contents of the disk file can be displayed in hexadecimal for machine language, and in ASCII line format. The latter allows selected BASIC statements from a disk file to be merged into a program. (List Price: \$20)

**Requires:** 10K, one disk drive, PC-DOS.

IRC Associates

### Mr. QuarterMaster

A menu-driven inventory program. Features include the ability to generate reports such as inventory listing, reorder listing, usage listing, and an average/shortage listing; screen display of one or more stock items; price quotations, in

one of four possible formats, outputted to the display or printer; recomputation of maximum, minimum, and reorder points every six months (or longer) predicated on past usage and delivery times; receipts and issues updating with proper adjustments made to quantity on hand, quantity on order, usage and due-outs for the updated stock item; plus file maintenance capabilities including add, change, or delete inventory items.

(List Price: \$120; manual alone \$15)

**Requires:** 64K (PC-DOS 1.1), 96K (PC-DOS 2.0), one disk drive, PC-DOS 1.1 or 2.0, monitor, printer.

### VersaForm Templates

Three new templates for the *VersaForm Business Form Processor/Database* program. The templates include a diskette providing a screen format, form print formats, a set of preconfigured management reports, and a starter set of business forms where appropriate.

The *Mailing List Tem-*

*plate*, in conjunction with *VersaForm*, provides a database design for storing, retrieving, and printing mailing labels. Labels can be selected by a variety of criteria, and can be printed in sorted order. Master lists can be generated and the data stored quickly updated. The template can print labels of various sizes, with up to nine lines per label.

The *Expense Journal* and *Cash Receipts Journal* Templates feature screen formats similar to a journal entry page, and can function as journals of original entry for entering expenses and cash receipts by categories. The templates also feature a set of preconfigured reports which will produce sorted, detailed lists or summaries of expenses or receipts by accounts or subaccounts.

The *Expense Journal Template* has a check register report which can be used to reconcile checks with bank statements. The *Cash Receipts Journal Template* can print bank deposit slips for each cash account maintained.

(List Price: \$39.95 each)

**Requires:** 128K, two disk drives, PC-DOS, *VersaForm*.

## SOFTWARE

### AutoCAD

A general purpose computer-aided-drafting program. *AutoCAD* can generate drawings with up to 127 layers and colors, allowing selective viewing or plotting of any layer or combination. The program can calculate and display the distance between any two points in a drawing, and can create drawings of any size to any scale. It can work at any level of scale using bi-directional zooming, and can copy, modify, erase, rotate, and scale drawings vertically and horizontally.

*AutoCAD* can also generate repetitive patterns automatically, and uses as drafting components both previously created drawings and basic elements such as lines of any width, circles, arcs, and filled-in areas. The program can be used with a light pen, a digitizing tablet, commands from a keyboard, or any combination of these input methods.

Four versions of the program are available, for systems with differing equipment. The versions are for systems with: a single color monitor; both a color and a monochrome monitor; color monitor and Hercules graphics card; and color monitor with a Vertrex VX-384 display driver.

(List Price: All versions \$1,000 each; demonstration disk \$50)

**Requires:** Single Screen;

192K, two disk drives, PC-DOS, color monitor, color/graphics adapter, asynch communications board, plotter; *Dual Screen:* 128K, two disk drives, PC-DOS, monochrome monitor, color monitor, color/graphics adapter, asynch board, plotter.

### Estimating-PC

A screen-oriented material estimating program designed for steel fabricators. The program can accommodate up to four separate estimates, of over 3,000 separate line items per estimate simultaneously. Estimates may be saved and restored at any time using diskettes, allowing an unlimited number of estimates, both old and new, to be analyzed.

Labor factors can be entered manually or calculated automatically from internal labor tables, or both. Material is verified against a Master Index of shapes, with weights, areas in square feet, and labor factors automatically extended.

Reports generated by the program include Line Item, Grouped Material, and Cap Sheet.

(List Price: \$2,500)

**Requires:** 128K, two disk drives, PC-DOS, printer. *Digital Engineering, Inc.*  
325 John Knox Rd.

### DBX

An applications development assistance program for programmers working in Pascal. *DBX* stores keyed data-strings passed to it from a calling application program. These variable length key-strings are stored on disk, using a modified Indexed Sequential Access Method. Keyed entries are divided into pages, which are then indexed. Each page consists of an exact number of disk blocks, in which entries are kept sorted. Using high-speed fixed-length I/O routines, *DBX* can store and retrieve entries while limiting the average number of disk accesses to one per operation.

The program is designed to be included in a user's UCSD p-System library. The user may write a program to call it, or modify the call program included with *DBX* as an example, or modify *DBX* itself. Calling programs pass a simple "callback" containing input keys, input data, and operations; *DBX* returns out-

put keys, output data, the output page, and a result code for the success or failure of the operation.

The complete *DBX* package consists of the following: *DBX* itself; *MINIBASE*, an example call program; *DBTEST*, a diagnostic routine; and a 50-page manual describing the data structures, procedures, and principal algorithms.

(List Price: \$49.95)

**Requires:** 64K, one disk drive, p-System, Pascal. *Pascal & Associates*  
135 E. Rosemary St.  
Chapel Hill, NC 27514

# Mom Knows

## When it comes to efficient communications-

MOM can fix you up with the hardware and software to turn your IBM PCs,<sup>™</sup> DEC Rainbows,<sup>™</sup> Apple Lisas,<sup>™</sup> and other micros—as well as terminals—into full-function work stations. Instantly.

MOM, which stands for Marketing of Micros to Mainframes, specializes in distributing sophisticated, state-of-the-art interface equipment. You can depend on her to link your micros to host computers quickly. Efficiently. Problem-free.

MOM's old fashioned when it comes to product reliability, service and support. Her advice is sound. Trust her. MOM suggests only those products that will provide you with the solutions you need. Tell her what your needs are, MOM will tell you the best way to increase productivity as well as keeping costs down.

### **MOM knows the value of a dollar.**

Money doesn't grow on trees. So solutions to today's business communication problems need to be

compatible with the next generation of technology. MOM stretches your computer investment dollars by adding processing capabilities to microcomputers and terminals,

eliminating the need for additional expensive hardware. Data control is centralized in the mainframe.

### **Meet a few of MOM's family.**

MOM markets a growing number of very impressive hardware and software products. Each one is compatible with a variety of microcomputers.

### **Meet IRMA.<sup>™</sup>**

IRMA goes with CHARLIE, the IBM PC or XT.<sup>™</sup> IRMA is a Decision Support Interface<sup>™</sup>—a printed circuit board

that slips into the PC and provides a direct link to the IBM mainframe computer. IRMA provides full 3278 emulation. She puts you on line with the mainframe—via a coax cable—giving you instant access to the big computer, the prime source of current data.

### **And then, of course, there's sweet IRMALINE.<sup>™</sup>**

IRMA's sister, IRMALINE, links personal computers—no matter how remote—to IBM 3270 networks. And like her sister, IRMALINE is a Decision Support Interface. She lets you conduct 2-way phone communication with your mainframe via a 3270 terminal, from across town or around the world. IRMALINE connects you direct to your main-

frame with a local phone call rather than having to dial long distance. So you save money!

Team IRMALINE with IRMALETTE<sup>™</sup>—another member of MOM's family—to get the same data capture functions IRMA provides.

### **PC/COM.<sup>™</sup> The perfect mate for IRMA.**

This software system works in conjunction with IRMA to provide high speed transfer of files between the mainframe and the IBM PC or XT. PC/COM's universal file transfer capability is compatible with major IBM operating systems and associated application files. Single function keys provide users with easy-to-use menus to transfer text files, source programs, data and object files between the mainframe and the personal computer. Users are subject to centralized mainframe control, so security is much tighter. MOM believes in keeping a tight lip.

### **AVATAR.<sup>™</sup> MOM's UNIVERSAL TERMINAL CONVERTER.**

AVATAR is MOM's self-contained microprocessor system that converts a terminal into a full-function, stand-alone personal computer. All it takes is a simple cable connection between

# Best.

## -from micros to mainframe-MOM™ does it all.

the terminal and the host system. No terminal modification is required. You get PC power on the terminal in addition to your normal terminal capability.

In addition, AVATAR is portable, so it's very easy and efficient to use. Buy AVATAR, and MOM will give you CP/M,® MS-DOS,™ WordStar,™ CalcStar™ and CBASIC™ software. Absolutely free! File transfer software is available as an optional feature.

### AVATAR PA1000: Another way to talk to any computer.

The PA1000 protocol converter allows you to connect any asynchronous terminal or PC into an IBM 3270 network and simultaneously into any asynchronous host system. You can do it from either a local or a remote location. The PA1000 has additional ports to which you can attach a printer.

The PC Traveler™ is a full-function IBM-compatible, portable computer. A 28-pound wonder, it comes standard with a gas plasma display for 25 lines/80 characters, 128k RAM memory and an IBM PC-type removable keyboard. The dot matrix impact printer is bi-directional, 132 char-compressed.

The PC Traveler has graphics capability and communication options (300/1200 BPS internal modem). The 8 meg floppy disk is upgradable to 16 megs. The computer uses 16 bit, dual 80186 processors and is 10 times faster than the IBM PC.

Available for delivery, Jan., 1984.

### MOM and PATCHES.™

Anything worth preserving is worth protecting, so MOM developed PATCHES. A patented chip protection

system insures the integrity of her software. This system allows users to copy MOM's software for their internal use, while a companion chip installed in the PC prevents unauthorized use. PATCHES makes and keeps software and communications private and secure.

### Call MOM. 1-800-241-1170.

MOM knows what's best when it comes to micro-to-mainframe access. She's made it her business to know the market. Just ask her about products. Bring your problems to her. Trust her for the best advice. MOM knows how to improve your communications network, and nobody is as cost and quality conscious as she.

Mom is Marketing of Micros to Mainframes, Two Northside 75, Atlanta, Georgia 30318.

**MOM even has a computer.** This small, professional computer in a briefcase caught MOM's eye.

# SYSGEN ANNOUNCES TAPE BACKUP FOR THE IBM PC.<sup>™</sup> WITH OR WITHOUT HARD DISK.

**Sysgen II-10** Fast streaming cassette backup with 10 Mbytes of disk: **\$2995.\***

**Sysgen II-20** Fast streaming cassette backup with 20 Mbytes of disk: **\$3795.**

**Sysgen Image<sup>™</sup>** Fast streaming backup for IBM's XT: **\$995.** (Right. Nine hundred ninety-five dollars!)

Sysgen is delivering complete low-cost Winchester systems with high-speed tape cassette backup.

Low cost means that everyone can afford to keep their valuable data safe and movable.

High-speed means you can back up an entire Sysgen II 20 Mbyte hard disk system in four minutes max.

Our hard disk systems operate under PC-DOS<sup>™</sup> or CP/M-86<sup>™</sup>.

Under PC-DOS, they look like disk drives C: through L:

Under CP/M-86, you get fourteen new "disk drives."

And if you own an IBM XT, which includes a hard disk, you can get safe, fast backup with our new Image streaming tape cassette backup system for only \$995.

Look to Sysgen for fast, inexpensive backup. With or without hard disk.

For complete information, see the smartest computer store in your neck of the woods. Sysgen, Inc., 47853 Warm Springs Road, Fremont, CA 94539. 800-538-8157 ext. 970; in Calif., 800-672-3470 ext. 970.

## SOFTWARE

### The Link Module

An optional software module for the *MicroPlan* spreadsheet program, designed to be useful in analyzing data from outside sources. Data files obtained from mainframe systems, commercial time-sharing services, or other applications programs, can be analyzed and loaded into a *MicroPlan* worksheet.

The *Link Module* features posting and cross tabulation commands. With these commands, data can be posted either to individual or multiple rows or columns. In addition to reading files from other applications, *MicroPlan* tables can be read by applications such as database and word processing programs. The module also allows *MicroPlan* to read DIF files.

(List Price: \$295)

**Requires:** 64K, two disk drives, PC-DOS or CP/M-86, *MicroPlan*.

### DR LOGO

A simplified Logo interpreter that includes established Logo features such as turtle graphics, list processing, workspace management, and full-screen program editing. In addition, help screens and a procedure edi-

tor explain Logo primitives and gives examples of how they are used. *DR Logo* offers the user up to 10,000 memory workspace nodes.

A programming feature allows "comments" with programs, explaining individual operations and statements. Comments may be deleted from completed and debugged programs without affecting recorded procedures. The software also permits multi-window displays, allowing commands and editing procedures to appear within a user-defined area on-screen so that text does not interfere with displayed graphics.

*DR Logo* is written in C, and includes such program debugging aids as procedure tracing and statement monitoring. It supports double-precision floating-point mathematics, including a full set of transcendental functions, logarithms, and their inverses. It can support up to 15 significant digits. (List Price: \$149.95)

**Requires:** 192K, one disk drive, PC-DOS, monochrome or color monitor with color/graphics adapter.

### Dental Office Management Program

A dental financial management program for the PC-XT, providing accounts receivable, billing, and record keeping capabilities. The *MICRO/SYS80 Dental* program is designed for use with a hard disk. It can produce reports such as walk-out statements, reconciliation reports, charge slips, and appointment lists. Third party billing on standard ADA forms or SUPERBILL format is provided, and financial data reports that may be generated include statements, accounts receivable with aging, and production analysis and collection analysis for all producing dentists within an organization.

The program is written in RM COBOL, and is provided in a machine language

version. It can interface to word processing programs, and has the capability to maintain a clinical and payment history for two years. (List Price: \$2,400; demo version \$30)

**Requires:** PC-XT; 128K, Hard Disk, PC-DOS 2.0, RM COBOL Run Time Package.

## SOFTWARE

### CP+ Version 2.0

A set of programs providing three functions: a computer-aided tutorial on the basic operations of a personal computer; an English language user-interface to a system's operating system and applications programs; and a set of file management utilities. The software's first function provides the user with instruction on the most important computer operations, on a prompted experimental basis. Mistakes in keying commands are pointed out by the tutorial, allowing first-time users to walk-through the operations of their systems quickly.

The second function of CP+, its command interface, provides English menus for performing operations such as program selection, file copying, viewing disk directories, erasing, renaming, printing, reviewing, disk formatting, system file copying, and others. This function allows a user to perform operations without the need to enter every file name and coded instruction in precise detail.

The third feature of CP+ Version 2.0 is a facility called START+, which allows a user to integrate applications programs through a customized menu screen. Applications can be loaded,

and CP+ control functions called, from one menu screen.

(List Price: \$200)

**Requires:** 64K, one disk drive, PC-DOS, monitor.  
*Taurus Software Corp.*  
3155 Kearney, #100

### INTERACTIVE

A simulation language enabling the user to evaluate such areas as manufacturing systems, inventory policies, and scheduling alternatives, through the creation of simulations. The software does not require programming knowledge of the user. A simulation is created by filling in forms provided by INTERACTIVE's forms editor. The software checks the logic of simulations created and produces run time interactive simulations through status reports and facilities for altering simulation values.

Included with INTERACTIVE are eleven random distribution functions.

(List Price: \$2,500)

**Requires:** 128K, two disk drives, PC-DOS.

### SIGN-MASTER

A graphics program allowing users to convert text graphics screens into instant photographic prints or slides with a Polaroid Palette computer image recorder. Using the program with the Polaroid Palette permits users to create 3 1/4 X 4 1/4 inch instant color prints, conventional 35mm color slides, or Polaroid Polachrome rapid-access slides from graphics displays.

The program provides an interactive menu which prompts the user to choose from a selection of 72 possible colors, to transform monochrome graphics into prints and transparencies, and/or transfer or reassign colors from a display's output. Users may also change exposure settings, designate interlacing to eliminate raster lines, and prepare multiple slides in a batch exposure.

Following SIGN-MASTER's on-line instructions, users are able to control font type, character sizes, colors, underlining of text, italics, and margin justification. Columnar tables of text or numbers can be enclosed in user-selected grid patterns, and up to 100 lines of text can be displayed on a page, depending on font, type, and size.

(List Price: \$245)

**Requires:** 192K, one disk drive, PC-DOS, mono-

chrome monitor (with Hercules graphics card) or color monitor (with color/graphics adapter), Polaroid Palette recorder, pen plotter or dot matrix printer.

AccuTouch Keyboard Training, Keyboard Productivity Inc.

### AccuTouch Keyboard Training

Self-education programs for learning either the standard QWERTY or the new DVORAK keyboards. The AccuTouch training system is contained on floppy diskettes, and includes a training manual, keyboard charts, and progress recording forms.

The first section of the programs provide instruction in the basic essentials of typing. This is followed by sections giving instruction in correct keying techniques for alpha keys, top row numerics, and right-hand cluster numerics. Exercises measure the learner's speed and accuracy, and remedial exercises can be called in to help the user overcome repetitive errors.

(List Price: \$269)

**Requires:** 64K, one disk drive, PC-DOS, monitor.

### GRAFOX

A graphics program which can draw information from either IBM standard or Data Interchange Format (DIF) files. The program features menu-driven chart description procedures, and single keystroke commands for producing bar, pie, piebar, and line charts. GRAFOX can graph up to four database fields at once, and can plot up to three graphs simultaneously.

The initial release of GRAFOX offers full color screen capabilities, and col-

or printing through compatibility with the Hewlett-Packard 7470A plotter and many printers. The program can screen out data containing errors, and can generate a report of any inaccuracies in the data entered.

(List Price: \$295)

### GEOGRAF

A graphics program allowing a user to create graphics using pen plotters. The program consists of fourteen subroutines written in BASIC to create plots and graphs. GEOGRAF can be added to a user's applica-

tions programs, adding 14 one-word commands to replace the symbol commands required by most plotters.

With the graphics software, the user can establish communications with a plotter, scale a plot, draw and label axes, plot data points with user-selected symbols, connect data with a selection of line types, and draw circles. The routines can handle log scales. The program package includes source code.

(List Price: \$250)

## PC Connection Hardware Special

through January 31, 1984

### FREE

**Parallel Printer Cable**  
(our usual price \$32)  
with the purchase of any printer from PC Connection

## CONNECT WITH US

Not sure what you need? Is the software you want compatible with your system? Do you know that most professional software requires at least 128k of memory? Do you know what hardware you need for a given application? Our trained salespeople will gladly take the time to discuss your system and your requirements. Call us anytime Monday through Saturday 9:00 to 9:00 at 603/446-3383

## OUR POLICY

- We do not charge your card until we ship
- No surcharge added on VISA and MasterCard
- No sales tax
- We fully insure all shipments at no additional charge
- Allow one week for personal and company checks to clear
- COD maximum \$500 Cash or certified check
- 120 day guarantee \*

## SHIPPING

- Continental US:**
- Monitors, printers, drives add 2% for UPS surface
  - All other items UPS surface add \$2 per order
  - All other items UPS 2nd Day Air add \$3 per order
  - UPS Next-Day Air available to some areas
- Outside Continental US:**
- We add freight charges to credit card purchases
  - If you are prepaying, please call 603-446-3383 for information on shipping and freight charges

# IBM PC CONNECTION™

**CO-MAIL**

An electronic mail program for formatting and transmitting messages using the U.S. Postal Service's Electronic Computer Originated Mail (E-Com) mail service. **CO-MAIL** includes a text formatting module which supports all E-Com features, and a communications module for both auto-dial and manual modems. A "preview" feature of the program permits the user to print a copy of all messages in final E-Com format prior to transmission.

The program presents all available options to the user on a single menu. **CO-MAIL** can handle both single letter and bulk mailings of any size without requiring intermediate files. It is also compatible with text editor programs and can accept input from existing mailing lists maintained by the user's database or other software.

**CO-MAIL** is certified by the U.S. Postal Service for E-Com transmission in all three message modes (SAM/COT/TIM). (List Price: \$375)  
**Requires:** 128K, one disk drive, PC-DOS, serial port, modem.  
**ICA Systems, Inc.**  
 P.O. Box 57165  
 Washington, DC 20037  
 (703) 620-5835

CIRCLE 725 ON READER SERVICE CARD

**Amortization Utility**

A program that prepares and lists amortization tables for three types of transactions—compound interest, summation of an ordinary annuity, and present value of an ordinary annuity. The tables can begin in any interest period and provide totals by year.

The program calculates one variable—present value, interest rate, interest periods for year, number of periods, or future value—if all other variables are known.

(List Price: \$29.95)

**Requires:** 32K, one disk drive, PC-DOS, monitor.  
**Grovetown Software Co.**  
 1335 Old Louisville Rd.  
 Grovetown, GA 30813  
 (404) 556-6325

CIRCLE 783 ON READER SERVICE CARD

**LINK-LABELS**

A two-part diskette identification system, consisting of a serial numbered label for the diskette with a correspondingly numbered diskette envelope. Space is provided on both the label and the envelope for a diskette's assigned name, and the printed format of the envelope allows for indexing of the diskette's contents.

Available options include custom numbered series, as well as a personalized data line in place of the serial numbers. The **LINK-LABEL** system is available in five colors.

(List Price: Dozen \$6.75-\$10.00, depending upon style)

**Hexco, Inc.**  
 P.O. Box 199-PL  
 Hunt, TX 78024

CIRCLE 779 ON READER SERVICE CARD

**Flexi Disk Envelopes**

A line of 5¼-inch diskette envelopes made from Tyvek, a Dupont material nearly impossible to tear. The bright white envelopes provide ample space on which to list the diskette's contents. The envelopes are packaged in quantities of 25 envelopes, five packages per box.

(List Price: \$25 Box)

### The "Original" Roll-Top Desk

A finely-finished roll-top desk designed for computer equipment. The desk features locking drawers and roll-down tambour top, and built-in power circuitry providing four outlets with a 15-amp circuit breaker. The power circuits have an automatic shut-off connected to the center drawer slide, and cable routing slots cut into the desk ensure ease of system hook-up without wire tangling. Each hardware

TOUCHDOWNS, Hooten Co.

compartment is fully ventilated for heat dissipation.

The desk's printer cradle is designed to fit printers of the size of the Epson MX 80/100, and is load-tested to 100 pounds when fully extended. In addition, the cradle has an automatic feed paper tray below it for convenience. The printer itself is held at a 45-degree angle for easy reading of printed material.

The center drawer section of the desk is designed to hold the user's systems unit and keyboard at a convenient height.  
(List Price: \$1,195-\$1,634, depending upon size of desk area and wood finish)

### TOUCHDOWNS

A set of eight enlarged keytops for the major control keys of a user's keyboard. The keytops fit over the existing keys, and provide the user with a larger striking area for the following keys: BACKSPACE; RETURN/ENTER; SHIFT (2 keys); TAB; O/INS; CTRL; ALT. TOUCHDOWNS are available in either charcoal, providing contrast to the other keys on the keyboards, and IBM grey.

The keys are stamped with the keys functions in English, instead of the existing symbols.

## PUBLICATIONS

### Mail Order Reporter (MORE)

A publication providing prospective buyers of equipment by mail with a listing of dealers, products, and prices. Two reports are available, one each for software and hardware.

MORE's *Software Report* includes word processors, spreadsheets, databases, communications, financial/accounting programs, etc. The *Hardware Report* lists printers, monitors, hard disks, modems, diskettes, etc. Both reports provide pricing tables, allowing the user to compare prices from several dealers simultaneously.

MORE also produces a *Guide to Trouble-Free Mail Order Buying*. This publication shows buyers how to protect their money and save trouble when ordering by mail. The guide is provided free to purchasers of either Report.

(List Price: \$9.95 each Report; \$17.50 for both)

**YOU CAN WIN  
THIS PEOPLE  
MOVER FREE!**

# JUST GIVE US A GREAT NAME FOR THIS DATA MOVER.

FIRST EVER "ELECTRONIC" DISK FOR THE IBM PC.

That's right. You can win a brand new Chevy S-10 Blazer. FREE. All you have to do is submit the best name for our exciting new "ELECTRONIC" DISK. A name that reflects its function and performance as a floppy disk replacement.

## WHAT IS AN "ELECTRONIC" DISK

"ELECTRONIC" DISK is the functional name we've given to this first-of-a-kind product for the IBM PC & XT. It's an operation-ready module offering to 368 KB for new or existing PCs. There's no software or sub-routines required. Just plug one in and you get instant data access ... up to 50x faster than a conventional floppy disk. And without inherent head and disk wear. Or electro-mechanical failures and data loss. The module also offers a U.P.S. (uninterruptible power supply) to make sure you won't lose data from power "glitches" or when power is temporarily removed.

## WHY YOU'LL WANT ONE

The "ELECTRONIC" DISK gives your computer greater power for personal, multi-tasking or multi-user applications. You'll be able to continuously scroll documents, instantaneously

look-up records, sort data and other disk bound processes at high speed. All without the start-stop aspect of typical operations regardless of operating system used.

## SUBMIT YOUR WINNING ENTRY TO THE "NAME OUR PRODUCT" CONTEST

There is no obligation when you enter the "Name our Product" contest. Simply pick up an official entry blank from any participating IBM PC dealer. While you're there, your dealer can give you complete details on the "ELECTRONIC" DISK. Or, you can request an entry form and details directly from the factory by writing to the address below. Please include a stamped, self-addressed business size envelope.

## I WANT TO ENTER YOUR "NAME OUR PRODUCT" CONTEST

- Please send me an official entry blank
- Please tell me the name of the nearest participating IBM PC dealer

## PUBLICATIONS/SERVICES

### The Kilobyte Kid's Book of Personal Computers

An introduction to computers written especially for children. It can also serve as an easy-to-read presentation for parents and other adults interested in learning about computers.

The book follows the story of the Kilobyte Kid, a character exploring the history and uses of personal computers. As the Kid learns so does the reader, about such topics as basic computer technology and the concepts of programming, hardware, and software.

(125 pgs., paperbound, \$9.95)

### Microcomputers on the Farm

A hardware and software buying guide for farm businesses. The book, by Jack O. Beasley, describes how personal computers can be used in farm operations for such activities as financial analysis, accounting, record-keeping, and structured decision making. Also covered are such areas as farm software vendors and their products, and dial-up commercial database services.

Included appendices provide step-by-step tutorials in a number of areas, including a generalized crop profit-analysis and land lease comparisons.

### Software Reports

An updated reference manual that reviews educational software for five brands of personal computers. Programs are evaluated in 20 subject areas for students in preschool through college. Educational software for adults, school administrators, and special education

students is also reviewed.

Regular updates will review approximately 100 additional educational programs. Updates will fit into the three-ring binder, allowing information to be kept current. Each software review includes a summary of the product's features, a brief description of the program, and a graded evaluation. Evaluations are based upon a structured point scale, with a letter grade given to each program based on ratings for educational usefulness, ease of use, instructional techniques, content, and documentation.

Each subject section of *Software Reports* begins with a reference chart that summarizes data about each program, allowing compari-

sons of programs. Materials are indexed by subject, program title, and brand of computer. A glossary is also included, explaining computer terms used in the book.

(List Price: \$39.95)

## How Old's That ROM?

Here's something that belongs in the "Interesting Things I Discovered While Looking for Something Else" file. If you ever need to know the version date of your motherboard ROMs, just use Debug:

```
A> DEBUG (hit the Enter key)
-D FFFF:FFFF FFFF
(hit the Enter key)
```

The date will be displayed in the ASCII listing in the first line on the right side of the screen.

Dennis Landrum  
Bryan, Texas

*True enough. If you don't want to use Debug, you can get the same results with this small BASIC program:*

```
10 DEF SEG=&HFF0000
20 FOR A=&HFFF5 TO &HFFFF
30 PRINT CHR$(PEEK(A));
40 NEXT
```

## EASY DOS Screen Color

I noticed that the programs CLS.COM in the July PC, and SCREEN.COM in the February PC, were practically identical when disassembled, even though they were presented very differently (one created in BASIC, the other in Debug). My program COL-

OR.COM (see Figure 1) reads three characters from the command line to set the foreground, background, and border color attributes. The program looks at the four low-order bits only, so the COLOR 123 is the same as COLOR ABC and COLOR abc. Combinations that seem readable on my monitor include COLOR FAH, COLOR CAH, COLOR KCC, COLOR NDD, and COLOR DFF.

The easiest way to create the file is to use Debug. (Type in everything you see below, except the A) prompt, the "File not found," the "0000" and ";" near the end, and the dashes at the beginning of each line.)

```
A> DEBUG COLOR.COM
File not found
-E 100 84 0F
-E 102 CD 10
-E 104 B4 03
-E 106 CD 10
-E 108 88 F5
-E 10A 87 00
-E 10C 8A 1E B4 00
-E 110 B4 08
-E 112 CD 10
-E 114 B8 00 06
-E 117 81 00
-E 119 BA 50 20
-E 11C 8B 1E 82 00
-E 120 D0 E3
```

## Personal Computer SMARTWARE™

**Revelation™ Data Base**  
for IBM PC & XT **\$950**

Large System Relational Database  
now available for IBM PC

- Variable length records  
Up to 65K in length  
(That's right—65,000 characters)
- Dictionary driven files & reports
- 8087 compatible for superior number crunching
- Report writer with many levels of sort
- Data compatible with Pick™ operating system mini
- XT compatible - handles files as large as the disk
- MS DOS compatible
- IBM PC, Columbia, Eagle, Compact, Hyperion, etc. compatible
- Many more features
- 32 bit technology, not old fashioned 8 bit technology
- More powerful than most mainframe data bases

**MergeCalc™** **\$125**

- Consolidates VisiCalc® spread sheets
- Compares two or more VisiCalc® spread sheets

Applications MergeCalc merges VisiCalc® files and extends the utility of VisiCalc®. One of the shortcomings of VisiCalc® is the inability to consolidate, merge or manipulate multiple VisiCalc® models automatically. With MergeCalc, you can perform operations between your models without changing the models in any way. MergeCalc is ideally suited to add segments of a total business into a consolidated model. This enables all types of complex analyses, such as variance analysis, percentage change reports, time change reports, share of market analysis, incremental sales or investment analysis.

**LoadCalc™** **\$95**

- Converts textfiles to DIF™ files

Applications: LoadCalc creates DIF files from textfiles, so you can move mainframe or minicomputer data into VisiCalc®, Visi-Trend/Plot, VisiWord or any program that uses DIF. LoadCalc allows selective conversion of the data, so you only get what you want. No programming required. With LoadCalc you can load "Actuals" from the mainframe into your "Budget" spreadsheet and compare the numbers.

## YOUR EPSON

Now you can have full menu-based operation of all control functions of all of the Epson printers. And all on one disk.

**Printer Basher (TM)** software lets you send all of the complicated printer control codes, in seconds, by making menu selections with a few simple keystrokes:

- **Control** the MX-80, MX-100, FX-80, FX-100, RX-80 and RX-100 Epson printers.

- **Select** pica, elite, condensed, enlarged, emphasized, compressed, doublestrike, underline, italics, or superscript modes or combinations of them.

- **Set** line spacing, margins, tabs and skip-over-perforation.

- **Control** half-speed (quiet), unidirectional and proportional printing.

- **Download** to your FX any of three complete 255-character IBM character sets including block and line graphics, greek symbols, etc. Now you can have those "missing" IBM characters for IBM programs and screen dumps.

- **Emulate** the IBM-label printer with your FX printer.

- **Print** graphics at the full FX text-mode speed of 160 cps, as much as 10 times the speed of graphics mode.

- **Select** any of the 11 Epson FX and RX internal character sets.

Printer Basher (TM) is available for the IBM-PC, Epson QX-10 and Apple IIe, Visa, MC, AmEx or send check. \$29.95. Free info. Dealers welcome.

-Q
```

The program first does a video call to get the current page in BH. The

second call gets the cursor position in DX. It then moves the row to CH, and the third call sets the buffer color from the third letter of the argument. The shifts extract the correct bits for the other colors, then the program clears the screen and recolors it from the current line down.

The above program will work in either DOS 1.1 or 2.0. In 2.0, however, you can configure your system to use ANSI escape sequences to change colors. In this case, the COLOR.COM program above will change only the border color, and the background and cursor colors where you're not typing. To get colored text, you should use

```

## for your IBM PC

### SIX PAK PLUS—AST

Up to 384K RAM, clock/calendar with battery back-up, serial port, parallel printer port, optional game port, Super drive and super spool software included FREE!

MEX-38064A 64K C.S.P. \$269.95  
MEX-38256A 256K C.S.P. \$469.95  
For Game Port Option Add \$29.95

### MEGA PLUS—AST

Up to 512K RAM, clock/calendar with battery back-up, 2 serial ports, parallel printer port, game port, Super drive and superspool software included FREE!

MEX-51064A 64K C.T. serial \$269.95  
MEX-51020S Second serial port option \$39.95  
MEX-51050P Printer port option \$39.95  
MEX-51050G Game port option \$39.95  
For Each Additional 64K RAM Add \$49.95

### COMBO PLUS II—AST

Up to 256K RAM, clock with battery back-up, serial port, parallel port, superspool software included FREE!

MEX-25064A 64K C.S.P. \$269.95  
MEX-25256A 256K C.S.P. \$419.95

### I/O PLUS II—AST

Up to 2 serial ports, parallel printer port, game port, clock/calendar with battery back-up, Super drive and superspool software included FREE!

IOI-7500A Clock & I serial port \$129.95  
IOI-7500P Printer port option \$39.95  
IOI-7500S Second serial port option \$39.95  
IOI-7500G Game port option \$39.95

### QUADBOARD I—QUADRAM

Up to 256K RAM, serial port, parallel printer port, clock/calendar, RAM disk and printer spooler software.

MEX-41020A Quadboard w/o RAM \$214.95  
MEX-41064A 64K Quadboard \$273.00  
MEX-41256A 256K Quadboard \$399.95

### QUADBOARD II—QUADRAM

Two serial ports, clock/calendar, memory expansion, and Quadmaster software.

MEM-40064A Quadboard II 64K \$275.00  
MEX-40256A Quadboard, 256K \$399.00

### QUADLINK—QUADRAM

Allows IBM PC to run Apple software, includes interface card and software to allow your IBM PC to run both Apple DOS and PC DOS.

CPX-50500A Quadlink \$485.00

### SYSTEM CARD—MICROSOFT

From the authors of MS-DOS—up to 256K RAM, serial port, parallel printer port, clock/calendar, plus RAM drive disk emulation, print spooler, time utilities and terminal emulation software. DOS 1.1 or 2.0 compatible.

MEX-18064A 64K system card \$279.95  
MEX-18256A 256K system card \$429.95

### HI-RES COLOR MONITORS

Only the Best Quadchroma or Princeton Hi-12 690 x 480 resolution, 16 brilliant colors, special 31mm dot pitch tube, includes FREE! cable.

VDC-241301 Quadram Quadchrome \$549.95  
VDC-241401 Princeton Graphics Hi-12 \$529.95

### AMDEK MONITORS

Full line of high quality monochrome and color video monitors.

VDM-401270 Video 310 Amber (IBM) \$199.99  
VDC-401320 Color II (RGB) \$429.99  
VDC-401330 Color III (RGB) \$399.95  
VDC-401340 Color IV (Analog RGB) \$775.00

### HERCULES GRAPHIC CARD

Two pages of ultra-high resolution text and graphics, 720 x 348, compatible with Lotus 123, VisiCalc, dBASE II, etc. includes parallel printer port.

IOV-5010A Hercules graphic card \$369.95

### PLANTRONICS COLOR PLUS

Up to 16 colors, 80 characters, bi-planar technology, includes parallel printer port.

IOV-4015A Plantronics Color Plus \$379.95

### QUADCOLOR I & QUADCOLOR II

Quadcolor I delivers standard IBM PC color and graphics add Quadcolor II and hi-resolution (640 x 200) color graphics are possible.

IOV-4010A Quadcolor I basic board \$234.95  
IOV-4020A Quadcolor II add on \$229.95

### HAYES SMARTMODEMS

300 and/or 1200 baud direct connect, auto answer-auto dial, pulse or touch tone, auto baud rate selection, 1200B is a plug-in board for IBM PC only and includes Smartcom II FREE!

IOH-5500A 1200B with Smartcom II \$399.95  
IOH-5500A Smartmodem 1200 \$475.00  
IOH-5400A Smartmodem 300 \$199.99  
SFP-5500S30M Smartcom II \$75.95

### THE BEST SOFTWARE For IBM PC

We have taken the top rated programs and reduced the price making them a super value.

LOTUS 1 2 3 Best spreadsheet \$329.95  
SFP-24001020M Lotus 123 (1A) \$329.95  
dBASE II Best Data base \$429.95  
SFP-11210100M Ashton-Tate dBASE II \$429.95  
CROSSTALK Best communications package \$129.95  
SFP-3770100M MicroStuff Crosstalk \$129.95

### DISKETTES For IBM PC

High quality double-sided, double-density diskettes, certified to be absolutely error free. Box of ten, warranted for one year.

MMD-5220104 With FREE! plastic case \$24.95  
MMD-5220101 Verbatim Diskette \$24.95

JADE IS AN AUTHORIZED DEALER FOR EPSON, OKIDATA, TOSHIBA, MANNESMANN-TALLY, C.ITOH, ETC. CALL FOR BEST PRICE!

### OKIDATA PRICES SLASHED!

Okidata's new plug-n-play ROMS for Gk 92 or Gk 93 printers are fully IBM PC compatible! 412 ASCII characters, full graphics, complete Epson emulation and near letter quality printing not available with Epson.

PRM-43092 Okidata 92 160 cps \$459.95  
PRM-43093 Okidata 93 160 cps \$799.95  
PRA-43066 Plug-n-play for G2 \$49.99  
PRA-43067 Plug-n-play for G3 \$49.99  
WCA-2536A IBM PC to Gk or Epson cable \$32.95

### COMREX CR-II

Best buy in letter quality printers. NEW! from Comrex! full feature letter quality printer. FREE! BK buffer, logic seeking bi-directional printing, boldface proportional spacing, double-strike, backspace underline, true super script and sub script, drop in daisy wheel cartridge.

PRD-11101 CR-II parallel \$499.00  
PRD-11102 CR-II serial \$599.95  
PRA-11106 Tractor option \$95.95  
PRA-99700 Cut sheet feeder \$199.95  
PRA-11115 Keyboard option \$179.95

### NEC 3550 LETTER QUALITY

Only full IBM PC compatible letter quality printer available—why settle for less?

PRD-35501 NEC 3550 printer \$1799.95

### 64K RAM UPGRADE For IBM PC

High speed RAM upgrade kit with parity (error detection) and one year warranty.

MEX-441066 64K kit for IBM PC \$49.95

### 320K DISK DRIVES

Tandon TM-100-2 double-sided, double-density 320K disk drive. Original equipment drive on IBM PC.

MSM-551002 Full size Tandon \$324.95  
MSM-551004 Half-height 320K drive \$199.95  
MSM-600581 Tasc Half-height \$239.95

### HARD DISK For IBM PC

Hard disk with controller, software and P/S.

MSH-960205 5MB system \$1395.00  
MSH-960210 10MB system \$1699.00  
MSH-960215 15MB system \$2195.00

### KEYTRONICS KEYBOARD

Similar to the IBM PC keyboard but with all the keys in the right place!

KEE-451000 Keytronics/IBM \$195.95

## USER-TO-USER

the second program below, ESC.COM (see Figure 2), which allows any escape sequence to be sent to ANSI.SYS.

This program takes the argument(s) given, adds an escape character before it and a \$ after, and then calls the DOS write-to-screen system call. So: ESC [36M will set the foreground color to cyan, and ESC [41M the background color to red. You can use ESC.COM in .BAT files to move the cursor, erase lines, and the like—see chapter 13 of the DOS 2.0 manual for a list of the available escape codes.

Note that the order of the RGB Bits for color numbers is reversed for these sequences. I have COLOR 300 and ESC [36M in my AUTOEXEC.BAT file. Also note that when you go into BASIC then exit to DOS, you destroy any effect of COLOR.COM, but not of ESC.COM.

One final caveat—to make ESC.COM work properly, you have to boot DOS 2.0 with a CONFIG.SYS file on your disk that includes the line: DEVICE=ANSI.SYS. The easiest way to do this is to go into DOS and type:

```
COPY CON: CONFIG.SYS
(then hit Enter)
DEVICE=ANSI.SYS
(then hit Enter)

(then hit Ctrl+Z)
```

You can also create such files with your word processor. ANSI.SYS must also be on your disk.

To create the ESC.COM file, type in everything you see below except the A> prompt, the "File not found," the "0000" and ":" near the end, and the dashes at the beginning of each line:

```
A>DEBUG ESC.COM
File not found
-E 100 BB 00 00
-E 103 02 1F
-E 105 C6 47 01 24
```

```
-E 109 C6 06 01 00 1B
-E 10E BA 01 00
-E 111 B4 09
-E 113 CD 21
-E 115 CD 20
-RCX
0000
:17
-W
-Q
```

John M. Sullivan  
Cambridge, Massachusetts

*Both of these short programs can come in very handy if you want to change or set colors in DOS. You can do some of the same things by going from DOS into BASIC, setting the colors, then exiting to DOS, but this has several drawbacks: you need to have BASIC on your disk, which wastes space (the two programs above are tiny), and switching from BASIC to DOS often kills any of the colors and gets you back to the boot-up 7.0.0 default.*

### Share Your Discoveries

Tell the world about your latest discovery. You'll encourage others to return the favor, and we'll pay you \$25 for your trouble. Please use double spacing when writing for this department. Mail your contributions to: User-to-User, PC Magazine, One Park Avenue, New York, NY 10016.

Note: In the interest of accuracy, we will gladly accept, even encourage, submissions containing program listings on a disk. PC will return or replace a disk at your request. If you send a disk, please include a printout of your submission to ensure against damage in transit.

Furthermore, all programs that create .COM or BSAVE'd executable code from decimal or hex data must be accompanied by the source code in assembly language. This, too, will reduce errors and will be instructive to readers of User-to-User.

## What if . . . your software gets too soft?

### You need software insurance.

Diskettes are fragile, and when a protected program is damaged, the results are expensive and inconvenient. If you have a backup diskette, though, you can have your Apple, IBM or compatible computer back on line within minutes . . . affordably. That's software insurance.

### Copy II Plus

This is the most widely used backup program for the Apple. Rated as "one of the best software buys of the year" by InCider magazine, its simple menu puts nearly every disk command at your fingertips. The manual, with more than 70 pages, describes protection schemes, and our Backup Book™ lists simple instructions for backing up over 300 popular programs. The Backup Book is expanded bimonthly, and is always available to Copy II Plus owners for only \$1.00 (and a self-addressed, stamped envelope). Best of all, Copy II Plus is still only \$39.95.

### WildCard 2 (formerly The Alaska Card)

Designed by us and produced by Eastside Software, WildCard 2 is the easiest-to-use, most reliable card available. Making backups of your total load software is as easy as pressing the button, inserting a blank disk and hitting the return key twice. WildCard 2 copies 48K, 64K and 128K software, and, unlike other cards, is always ready to go. No preloading software into the card or special, preformatted diskettes are required. Your backups can be run with or without the card in place and can be transferred to hard disks. \$139.95, complete.

**Important Notice:** These products are provided for the purpose of enabling you to make archival copies only. Under the Copyright Law, you, as the owner of a computer program, are entitled to make a new copy for archival purposes only, and these products will enable you to do so.

These products are supplied for no other purpose and you are not permitted to utilize them for any other use, other than that specified.

### Copy II PC

This is the only disk backup program for the IBM PC, PC/XT and PCjr that copies almost anything. Others may make similar claims, but in reality, nothing out performs Copy II PC . . . at any price. Copy II PC even includes a disk speed check and is another "best buy" at only \$39.95.

We are the backup professionals. Instead of diluting our efforts in creating a wide variety of programs, we specialize in offering the very best in backup products. So, protect your software investment, before things get too hot.

# TEKTRONIX 4010 TERMINAL EMULATOR PC-PLOT-III

THE GRAPHICS LINK  
BETWEEN THE IBM PC  
AND YOUR COMPUTER NETWORK

- Complete Communications Package
- Full 4010 Emulation
- Menu or Command Setup Modes
- Auto Dial, Auto Login
- Save Picture Files (IBM)
- Hewlett-Packard 7470A Plotting
- Upload, Download ASCII Files
- Multiple Terminals Emulated
- 4010 Only
- 4010 + ANSI X3.64 (VT-100)
- 4010 + CompuServ Executive
- Selectable Graphics Boards
- IBM Color/Graphics Board
- 640 x 200 Monochrome
- 320 x 200 4 colors
- Plotronics PC + Board
- 640 x 200 Monochrome
- 640 x 200 4 colors
- 320 x 200 16 colors
- Hercules Computer Products
- 750 x 350 Monochrome
- NOT Copy Protected, can be used with PC, PC-XT, DOS 1.1 or 2.0

Increase the utility of your IBM Personal Computer by using it as a graphics terminal in your local computer network or dial-up service. PC-PLOT will work with Precision Visuals 01-3000, SAS Graph, VISA/HostCard, purchase orders from D&B rated companies, and checks are accepted for payment. We will also ship UPS/ICOD. For instant shipment, call Steve Bean at 614-882-4786 with your purchase order or credit card number.

PC-PLOT is a field-proven program with hundreds of copies in use every day by major universities and Fortune 500 companies. If you have an IBM Personal Computer, you cannot afford to be without PC-PLOT-III.

PC-PLOT-III requires an IBM-PC, 64k minimum, 1 disk drive, graphics adapter (one of the three specified), and an asynchronous communication adapter which can be either IBM or on a multi-function option card which are available from many vendors.

PC-PLOT-III is available for same-day delivery from MicroPlot Systems and will soon be in stock at leading computer stores across the country. VISA/HostCard, purchase orders from D&B rated companies, and checks are accepted for payment. We will also ship UPS/ICOD. For instant shipment, call Steve Bean at 614-882-4786 with your purchase order or credit card number.

PC-PLOT-III is a bargain at \$95 because you will not have to purchase an additional communications program to gain access to CompuServ, The Source, or other time-share network. PC-PLOT-III is supplied on a single sided diskette and includes a comprehensive user's manual with both a tutorial approach for new users plus a technical description of the program and command structures for systems programmers.

### ADD FEATURES THAT ASHTON-TATE COULD NOT PROVIDE FOR THE IBM-PC!

dB KEY is a handy, easy to use set of routines that will enhance your dBASE II application programs.

The capabilities of these amazing routines will challenge your imagination, and yet they are as simple to use as any dBASE II commands. Think of what you could do with these abilities:

- Quit to: Execute commands upon exiting from dBASE II.
- Window: scroll windows up or down of blank them out
- Sound: Program different audio prompts or any musical sequence that you like
- Set the caps and num locks any way you want them
- Determine capacity and free space of any disk drive
- Verify system memory size and equipment status
- Utilize both the time and date functions in your program
- Print the screen as you see it
- Change the cursor size instantly
- And more

Yes, for just \$49, dB KEY can add a real touch of class. And clear, concise documentation makes it all so easy. To order, call or write.

# TAKE CONTROL OF THE MOST POWERFUL TAX PROGRAM IN THE FIELD

SoftTax is a complete tax analysis, simulation and preparation package for users of VisiCalc® software.

Designed for individuals, partnerships, trusts, or corporations, SoftTax allows you to prepare all appropriate forms and schedules for direct submission to the IRS—automatically.

SoftTax is comprehensive and economical. You can set up, modify, and finalize a model before SoftTax prepares the final returns. And the model itself can be simulated before you commit to permanent changes.

You can try this easy-to-learn, easy-to-use professional tax package with our special demonstration package available now for only \$25. SoftTax runs on IBM-PC & XT, Apple II+, IIe, & III.

Call 1-800-243-4358 (outside CT) for details.

## ELIZA IS HERE!

AT LAST! A FULL IMPLEMENTATION of the original ELIZA program is now available to run on your IBM Personal Computer! Created at MIT in 1966, ELIZA has become the world's most celebrated artificial intelligence demonstration program. ELIZA turns your computer into a non-derivative psychotherapist with whom you can converse much as you would with a live therapist. She analyzes each statement as you type it in and then responds with her own comment or question. Response time is virtually instantaneous, and her remarks are often amazingly appropriate! Designed to run on a large mainframe, ELIZA has never before been available to personal computer users except in greatly stripped down versions lacking the sophistication which made the original program so fascinating. Now, our new IBM PC version possessing the FULL power and range of expression of the original is being offered at the introductory price of only \$25. And if you want to find out how she does it (or teach her to do more), you can buy the complete IBM Disk BASIC SOURCE PROGRAM for only \$20 additional! Order your copy of ELIZA today and you'll never again wonder how to respond when you hear someone say, "Really, it's so what this computer of yours can actually do!"

#### AVAILABLE ON DISK IN TWO VERSIONS FOR THE PC

- 1 Protected Version ..... \$25  
 (Protected Version can be run but not listed or modified)
- 2 Unprotected IBM Disk BASIC Source Version ..... \$45  
 (Source Version can be listed and modified as well as run)

Both versions include a six-page user manual. Please add \$2.00 shipping and handling to the above amounts.  
 (California residents please add 5% sales tax)

#### YOU CAN SAVE MONEY

YES! Save money by using your IBM PC to do your time cards. Calculation accuracy and efficiency are the keys. You'll get both with the TMAI REPORTER. Plus you'll establish complete historical attendance records for each employee. \$249.95 Please write to find out what the TMAI REPORTER can do for you!

FIRMWARE PRODUCTS CORP.  
4750 Central Ave., #12-C,  
Phoenix, AZ 85012.

#### MANAGEMENT MODELS

FINANCIAL MANAGEMENT MODELS was created to HELP engineers, architects, CPAs and other professionals billing by the hour MAKE MORE MONEY. A planning and controlling system of VISICALC templates to help determine profitable billing rates, monitor billable time, budget & control projects and much more. Requires 64K, disc drive, VISICALC. \$295.00.  
PRO/PAC  
14925A Memorial Drive, Suite 207  
Houston, TX 77079  
(713) 496-1179

#### WEEKLY PAYROLL PROGRAM

For small businesses with 100 employees or less. 52 weeks of payroll. 64K IBM PC. Automatic federal and state tax, FICA, health insurance, etc. Handles wages, salaries, tips, and other compensation; reports: check stubs, W-2's, W-3's, 941's, and year-to-date reports. Only \$40.00. Documentation \$5.00.  
LITTLE'S INCOME TAX & BOOKKEEPING  
807 Linton Drive  
Newport News, VA 23602  
804-674-7677

#### BASIC REPORT WRITER

If you use/develop BASIC application programs, KOD-SCRIPT pays for itself on 1st day of use. No more tedious reports to code. End-user designs reports in seconds by answering prompts. Handles random/seq. files, any # of select criteria, flexible mailing labels, sorting etc. Can stand alone or append to program. 64K min. \$195.  
NONNOTE SYSTEMS  
P.O. Box 17039  
Los Angeles, CA 90017  
(213) 364-4644

#### SOFTWARE/CONSTRUCTION

Estimating system. Creates estimates by division, subdivision, subcontract, cost item; allows overrides; many special features. \$1,295. Job cost system. Tracks labor, material, subcontract costs; budget vs. actual by division; generates 11 reports. \$795. Both systems \$1,695. IBM/PC/MS/DOS. Apple II. Trials available.  
SCRIPPS DATA SYSTEMS, INC.  
9580 Black Mountain Road  
San Diego, CA 92126  
(619) 695-1540

#### POWERFUL BUSINESS SOFTWARE

Integrated Order Entry, Invoicing, Inventory Control, Accounts Receivable, Sales Analysis. Pig on most MS DOS Computers. Incl. history and forecasting graphics, multi-selective Mailing List module, Call Planning and Commission Statements. \$695. Complete Demo package sample data \$50. Refundable or applicable toward purchase.

### DISTRIBUTED COMPUTING SYSTEMS

DISTRIBUTED COMPUTING SYSTEMS  
Martha and Randolph Sts., P.O. Box 165  
Lombard, IL 60148  
(312) 495-0121

#### ORGANIZATION MAP™

A POWERFUL MANAGEMENT tool for the IBM PC that improves organizational productivity and enhances the management of human resources. Includes an organization analysis program as well as a human resource information system. Demonstration disk \$35.  
PACSETTER SOFTWARE  
P.O. Box 5270, Dept. B  
Princeton, NJ 08540  
(609) 737-6351

#### CONCURRENT TIMER PROGRAM

THE REMINDER HELPS you keep important appointments. The Reminder signals you with a pleasant but insistent tone at the time that you request, even if you are running another program. THE REMINDER does not interfere with the operation of any of your software, req. no extra hardware & may be run on IBM PC compatible computers—DOS 1.1 or 2.0. \$49.95. Mention this ad & send only \$39.95 + \$2 S. & H. (MN res. add 6%).  
PRAIRIE COMPUTING  
3220 Garfield Ave. South, Suite 105  
Minneapolis, MN 55408

#### DATA SECURITY—\$34.95

SECURE SENSITIVE DATA files with FAST-CRYPT. FAST-CRYPT is an efficient assembly language implementation of the powerful DES (Data Encryption Standard) algorithm. Encrypt or decrypt any disk file at 120,000 bytes/minute for IBM-PC, XT, & compatibles, 64K, any PC/MS-DOS.  
KIM SOFTWARE CO.  
P.O. Box 2186  
Painesville, OH 44063

#### COOK-WARE

COOK-WARE is a system for the institutional food service environment. It provides the capability to build, modify, print & update menus, perform nutritional analysis of menus, re-cost menus & recipes, recalculate recipe ingredients and manage food inventory. HOWE: 128K, 2 Drives; Demo \$29.95, \$1795 system.  
COMPUTRAN SYSTEMS INC.  
5150 SW Griffin Drive  
Beaverton, Oregon 97005

#### WE WANT YOUR SOFTWARE!

SOFTWARE DISTRIBUTION COMPANY needs products for its upcoming catalog. We need business, home management, games, and educational programs for the IBM PC and PCjr. We pay competitive royalties and provide design, sales, and marketing support. Write for details, or send brief proposal (in strict confidence) to:

SOFTWARE EXPRESS  
P.O. Box 3287  
McLean, VA 22103  
(703) 352-0367

### Software/Business Project Management

#### PRIMAVERA PROJECT MANAGER™

Critical path analysis for managers and planners. Offers interactive control of project activities, schedules, costs and resources—up to 10,000 activities in any work breakdown structure. Tabular and graphic reporting consistent with DOD standards; supports earned value analysis. Call or write for brochure.

PRIMAVERA SYSTEMS, INC.  
29 Bala Ave., Suite 224  
Bala Cynwyd, PA 19004  
(215) 667-8600

#### MicroPERT®

Project scheduling for IBM PC, XT and Compat, DOS 1.1 or 2.0 Time-scaled Network Diagrams and Gantt charts to monochrome display, color monitor or printer. Up to 220 activities per project. Flexible calendar. Extensive manual with samples. Easy to use. New Version 2 has many enhancements. Price: \$200.00-\$330.00

SHEPARD SOFTWARE COMPANY  
4750 Clough Creek Road  
Hedding, CA 96032  
Phone: (916) 222-1553

### Software/ Communications

#### INTERIM

A line of high performance intelligent terminal emulators that include VT52, VT 100, H19, 219 and IBM 3101. Features include uploading, downloading of files and manipulation of DOS files. Synchronization for most hosts supported. Fully programmable protocols and speeds 110-9600 baud operation. Requires 96K. Price \$230.

OFFICE SOFTWARE AUTOMATION  
4305 El Dorado Drive  
Palo Alto, TX 75075  
(214) 867-5307

#### 1-2-3 & VISICALC LOADER

LOADER converts test data downloaded from mainframes directly into 1-2-3 or VisiCalc. Handles mixed text and values without special formatting or programming. Now you can move your mainframe database into 1-2-3 or VisiCalc & Base-4 using just Loader and your terminal program. \$95.

#### MICRO DECISION SYSTEMS

Box 1392  
Pittsburgh, PA 15219  
(412) 276-2387

#### IBM 2780/3780 EMULATION

MicroGate & MicroGate II are integrated hardware/software products bringing BSYNC, batch communications to the PC. MicroGate provides easy-to-use, standalone 2780/3780 emulation. MicroGate II works with user-written programs allowing communications to be built into custom application software. QTY 1 prices: \$895.00

GATEWAY MICROSYSTEMS INCORPORATED  
9501 Capital of Texas Hwy., Suite 105  
Austin, TX 78756  
(512) 345-7791

#### RELAY

Compare and try RELAY. We think you'll buy it. HELP Key. Send/Receive files simultaneously, send spreadsheets PC to PC with complete error checking. Full-screen Editor, Up and Download, API, keyboard, Writas to 9600 baud, saves phone numbers, supports Hayes.

Don't underestimate RELAY because it's \$149.

VM PERSONAL COMPUTING  
80 East 42nd Street  
New York, NY 10165  
(212) 697-4747

#### REMOTE ACCESS

Have complete ease and control of an unattended IBM-PC. Develop and run programs, transfer binary or ASCII files, etc. Password protection and full simulation of the IBM keyboard. Full screen support for most terminals. \$89. Write for info.

VISA/MC  
CUSTOM SOFTWARE  
P.O. Box 1005  
Bedford, TX 76021  
(817) 282-7553

### Software/Compiler

#### C86—"C" FOR PROFESSIONALS

"C" brings great power, control and conciseness to programming. C86 brings FULL UNIX syntax (portability), source to a rich library (gives you control), no royalties, PCDOS & CP/M-86 support, and overlays. Ask a friend—we are ahead. Hotline support is solid. \$395. Call your dealer or CI.

#### COMPUTER INNOVATIONS, INC.

10 Mechanic Street, Suite 3-109  
Red Bank, NJ 07701  
(201) 530-0995

#### DeSmet C-5109

Full K & R C Compiler, assembler, linker, librarian, full-screen editor and example software. Both 8087 and floating point libraries. Rated 1st or 2nd in 8/83 BYTE Benchmarks. Newsletter. No royalties on generated code. Unlimited updates \$20/each. PC/MC DOS and CP/M-86. \$109.

C-WARE  
1807 New Brunswick Ave  
Sunnyvale, CA 94087  
(408) 736-6905

### Software/Data Management

#### PC POWER AND FLEXIBILITY

Fast-File. An easy to use, menu-driven file system. Features include 18-in-form input, automatic disc formatting and custom forms, records and reports. Powerful searches can be made using up to 100 key words per record or any other record data. Comes with full tutorial and reference guide. \$145.00.

#### GRYPHON SYSTEMS

922 Grange Hall Rd.  
Cedarville by the Sea, CA 92007  
(619) 436-1455

#### FORM MANAGER

COMBINES data entry, data base forms processing, and spreadsheets. Design forms on screen. Use them for data entry retrieval & calculations. Does data entry validation. Report writer sorts any 3 fields. Prints labels, reports, based on your own criteria. Handles up to 32,767 records. \$195. Demo disk-\$15.00.

BIT SOFTWARE  
P.O. Box 619  
Milpitas, CA 95035  
(408) 262-1054

#### T.I.M. III

A data base management system that generates and summarizes files, mailing lists, and employee records. The data can be accessed and searched in a number of ways. T.I.M. provides help screens and function key legends as user aids. Capacities include 32,767 records per file, 40 fields per record, 60 char./field. (List Price: \$500.)

INNOVATIVE SOFTWARE, INC.  
3000 W. 190th St. #360  
Overland Park, KS 66219  
(913) 888-0154

#### RELATIONAL DATA BASE SYSTEM

REVELATION turns your IBM PC into a data base machine. If you know about the PROX. OS you know all about REVELATION. Maximum record size to 64K. Files can have n records. Addressable storage to 2.4 billion bytes. English-like query language. User defined menus, screens, reports. Interfaces to 1-2-3, Wordstar, Multimate, CYPHER.

121 Second St.  
San Francisco, CA 94105  
(415) 974-5297

#### ReoQ—THE ULTIMATE DBMS

The only system that lets you design and create your own forms and reports right on screen! ReoQ calculates, reads, searches, sorts faster than other systems tested; interfaces w/word processing programs. Plain English manual, help screens, password protection. 32,767 records per file, 60 fields per record, 60 char. per field. \$395.00.

KEY SOFTWARE, INC.  
2350 E. Devon Ave., Suite 138  
Des Plaines, IL 60018  
(312) 256-3610

#### THE DATA FILER

The perfect list manager for form letters, labels, invoices, checks, client/prospect records, appl. & calendar functions + much more. Full flexibility w/report & screen formats; math capability. Very easy to use; menu driven. Many other advanced editing & file handling features. Integrate w/money WP programs. VISA/MC \$195.

MBS Software  
12729 N.E. Hassalo St.  
Portland, OR 97230  
(503) 256-0130

PC MAGAZINE • JANUARY 24, 1984

The sorting system part 1 explains and demonstrates 10 important sorting algorithms using color or monochrome graphics. Programs may be run with your data. BASIC source code for and description of algorithms included. Requires disk drive, 64k & either display card. Price \$45. \$2 shipping, IA sales tax. Available now.

**GENERAL COMPUTING**  
145 Summit Drive  
Cedar Falls, IA 50613  
(319) 277-7105

A comprehensive system for public & private, elementary or secondary schools. For the IBM PC or XT. Modules include scheduling, academic records, behavioral records, demographics, calendar, test analysis, admissions, outreach & finance. Designed by administrator. Developed by computer professionals. Over 200 records.

3355 Lenox Rd. Suite 750  
Atlanta, GA 30326  
(404) 233-1519

This test presents eight exercises that test your ability to think logically. The thought process you go through to solve these exercises is similar to the process you would use to develop sections of computer programs. Therefore, your ability to solve these exercises would be a good indicator of your ability to understand or even to write complex computer programs. Requires 16K, 1 disk drive, DOS. \$39.95. Send check or money order to:

TRIDATA CORPORATION,  
3057 College Heights Blvd.,  
Allentown, PA 18104. (215) 820-9577

increase main performance (2x to 150x) and get more accurate results (18 digit precision) with our 8087 Math Package for the IBM-PC. Included are an easy-to-install 8087 Numeric Processor chip with latest 8086 included too and easy to use interface libraries (with source code) for the IBM PASCAL Compiler IBM Fortran Compiler and the IBM MACROS Assembler. \$325. HALPPRICE COMPUTING WORKS, INC. 358 Veterans Memorial Highway, Suite MGI Cammack, N.Y. 11725 (516) 360-8827

Largest selection of engineering software—CAD, Heat & Mass Flow, structural, Statistical Analysis and much more. Microcomputer programs for Mechanical, Chemical, Civil, Electrical Engineers, Architects, Scientists, Contractors. Send for detailed catalog—include \$2.00 for postage and handling.

TECHNICAL SOFTWARE INC.  
3681 Lancaster Rd., #101  
Cleveland, OH 44121

AUTOCAD is 2D drafting and design enabling anyone who draws to create, edit and plot drawings. AUTOCAD is general-purpose and flexible, useful for architectural and engineering drawings of all types which previously required systems costing \$100,000. Dealer support includes training disk and manual for only \$50.

- XBAR-R charts • P-Charts • C-Charts • U-Charts • Cause and effect diagrams • Histograms • Basic statistics • Frequency distribution • PARETO Charts • Menu-driven • Tutorial • Complete documentation • Sample problems • High resolution graphics and printer output • Also available for Apple • SOC-Pack.

CULVERIN CORPORATION  
245 West Elmwood Dr.  
Dayton, OH 45459  
(513) 435-2335 or 1 (800) 547-1565

TEPRO 4010, a software package, permits the IBM PC owner with graphics and communication capability to emulate the TEXTRONIX 4010 terminal. It offers alphanumeric, graphics, file transfer, and hard copy when connected to a host system. Price: \$400. Also Consultants, CUSTOMIZED SOFTWARE. For further information call:

TECHNOLOGICAL SYSTEMS GROUP  
3852 Fordford Drive  
Atlanta, GA 30340  
(404) 938-2626

Linear, log, & log-log medium res color graphs. This new compiled version is very quick! Full screen menus, easy data entry, 9 lines per graph, 5 line types, full color control, interpolation, plot library on disk. Grafbas screen dump, requires 96K, graphics adapter, & PC DOS. Works great in black & white too! \$79.95.

**CARNEGIE SOFTWARE**  
P.O. Box 1152  
Redondo Beach, CA 90278

Quick, versatile, interactive structural programs—beams, columns & frames of any material efficiently analyzed & designed. Extremely friendly input & output with optional COLOR graphics. Specify PC configuration and send \$25 for demonstration disk to:  
c2b2—software design  
763 27th Avenue  
San Francisco, CA 94212  
(415) 751-1337

Civil Engineering programs for the IBM-PC. Single copy \$37 per program. Requires DOS & 128K. Earthwork w/super-elevation. Roadway Alignment. Coordinate Geometry w/traverse adjustment. Water Distribution Analysis. Continuous Beam Analysis w/variable X-sect. Pressure Sewer Analysis. Surveying Package.

SYSTEM, INC.  
P.O. Box 6234  
Miss. State, MS 39762  
(601) 323-8905

Pld note data reduction, coordinate geometry, topographic survey, parcel perimeter area chg, pt-to-pt coordinate plng, vertical curve dsgr, isolated hng design, pier & horizontal curve string, stadia reduction, architectural spec writing, pole embedment dsgr, grade beam on elastic foundation analysis, more.

DISCO-TECH  
P.O. Box 1659  
Santa Rosa, CA 95402  
(707) 523-1600

infinite precision rational arithmetic plus automatic formula manipulation. Includes exact integration, differentiation, limits, matrices, vector calculus, infinite series. Laplace transforms and the solution of algebraic or differential equations: \$300. Also MUIISP: \$250  
THE SOFT WAREHOUSE  
P.O. Box 11174  
Honolulu, HI 96826-0174

15 menu selected programs for equipment selection and evaluation, fluid flow, heat transfer. Friendly format includes single screen input/output form, on-line help, unit conversion and error trapping. Copy results to printer or disk. Save/recall input. Complete documentation. Send for brochure.

Engineering Software, Inc.  
2000 Washington St.  
Wilmington, DE 19802  
(302) 571-9575

PSI is the foremost producer of serious engineering applications for the PC. PAKS available handle chemical, mechanical, civil and power design & analysis problems. Our catalog is growing daily. Call or write for your free copy. See review PC Magazine, Nov 1983, page 567.

**PSI/SYSTEMS**  
Research Park, P.O. Box 3100  
Andover, MA 01810  
(617) 475-9030

**A NECESSARY** organizational tool. **EASY** and **TIME SAVING**. **ADD, DELETE, EDIT, UPDATE, LIST** volumes on screen, printer, or disk file in several formats. Supports user comments on volumes and files. Maintains up to 150 volumes on one 320K disk. Will run from Hard Disk. Req: **MS-DOS 2.0**. **VISA, M/C, MD, CHECK, CDD**. Only \$34.95.

**MultiPro**  
P.O. Box 342  
Saline, MI 48176  
(313) 429-2344

#### THE FINANCIAL COUNSELOR™

For the IBM PC. Provides a comprehensive analysis of your personal financial condition and develops an easily-accessed, up-to-date financial database and documentation for use in financial planning strategies. Includes financial, net worth and budget statements, planning worksheets, accounting journals, information and advice, glossary, bibliography & documentation binder. For brochure & details contact: **FRANCOIS COUNSELING PROGRAMS INC.** 1830 Arch Street, Berkeley, CA 94709 (415) 844-0699

#### NET WORTH™

Five sample reports and descriptive brochure will let you decide for yourself how this comprehensive program will let you keep abreast of your investments, assets and liabilities. Security tracking and graphics capability are also among its many features. For the IBM PC. Runs on 64K or 128K. \$295.

#### BULLISH INVESTMENT SOFTWARE™

P.O. Box 853  
Mansfield, TX 76063  
(800) 433-3605, (817) 473-9249

### Software/Games

#### STRATEGY GAMES

**PHARAOHS** Defeat the cruel Pharaoh Kefu by finding his sacred obelisk before he captures you. **PHARAOHS** is a strategic boardgame with varying levels of difficulty and numerous options for setup and play. Artificial intelligence techniques provide a capable and unpredictable opponent. Requires 128KB, mono or color. \$39.95. **RAMI** Command a fleet of Greek triremes in a real-time strategy game. Historical scenarios pit you against the computer as you seek to save Athens from invasion. **RAMI** requires color card, 96KB, \$39.95. **WITH LEE** IN VIRGINIA recreates the campaigns of 1862. Strategic and tactical movement and battles. Can you change history? Requires 96KB, mono or color card. \$39.95. **AIR SECTOR CONTROL** puts you in charge as an air traffic controller monitoring a sector of airspace. Fast action graphics and 20 levels of difficulty. Requires 64KB, mono or color card. \$29.95. **EXPERT SYSTEMS, INC.** P.O. Box 9 Redmond, WA 98052

#### MULTIPLAYER EMPIRE BUILDERS

**INCUNABULA** models the rise of civilization. Up to seven players control tribes that are trying to gain power and culture. A series of games allows practice of easier versions of the game before playing the master game. If you can't get 7 people to play, our artificial intelligence routines will test your abilities, providing 16 different opponents to choose from. High quality, two-level mapping system shows both a global picture and detailed tactical information. Requires 96KB, color card. \$49.95. **EXPERT SYSTEMS, INC.** P.O. Box 9 Redmond, WA 98052

#### YOUR OWN STARSHIP

Star date 2653.7—You look course for Starbase 4, 12 injured, energy down to 547. Suddenly, you're tractorbeamed to quadrum 8/1. A Klingon command ship appears, opening fire. SOS to Starfleet. Is it in time? **STARSHIP CHALLENGE**, a game of strategy & tactics, uses Artificial Intelligence response algorithms. \$34.95 VISA/MC 15 day full money back guarantee. DOS, 64K, monochrome or color.

#### MICKLIN DEVELOPMENT COMPANY

3613 Andrew Drive  
Bedford, TX 76021  
(817) 571-5714

#### ZORK MAPS & HINT BOOKS

**MASTER THE WORLDS OF ZORK, INFIDEL, WITNESS, DEADLINE, SUSPENDED, ENCHANTER, STARDROSS, and PLANETFALL** with our maps and hint books. We won't spoil your fun. Each book comes with multi-level hints and a game map. All 3 ZORKS including **ADVENTURE**, for \$18, or send \$2.50 for individual games. **BROKEN TIMBER PRESS**

1625 W. 38th Avenue  
Kansas City, KS 66103  
(913) 722-2464

#### SIEGE OF PLANET HOUSTON

**FIGHT YOUR WAY** back to planet Houston defeating & capturing perimeter forts beginning with the farthest outpost at the Galactic rim. Success depends on reaching the center of command behind the last line of defense. But don't take too long! Time works against your attack plan. PC/DOS, color/graphics adapter, 64K, \$25.25. Please see our display ad. **SATURN DUNBAR** 6427 Wilcrest, Suite 133 Houston, TX 77061 (713) 988-0887

#### DEDUX

**SHARPEN REASONING SKILLS** with this fun, challenging, deductive reasoning game. Sharpen programming skills as you study **DEDUX'S SOURCE CODE** (yes, commented Basic, source code is included!) \$20.00 + \$2.50 H. Three levels of difficulty. Ages 10 to adult. Specify monochrome or color graphics. **REMNOL COMPUTER SERVICES INC.** 235 Brighton Ave. Boston, MA 02134 (617) 787-0340

#### COMPUTER ART POSTERS

USE YOUR IBM PC to print striking "computer art" posters up to 2 x 3 ft in size. Choose from over 20 subjects including the Mona Lisa, Venus DeMilo, Einstein, pets, and more. Requires DOS and any IBM/PC compatible printer. For a complete package, which includes 3 diskettes, send \$28 to: **BUDGE & Co.** 7526 Willowcrest Rd. Salt Lake City, Utah 84121

#### BE CREATIVE!

• **MULTIMAZE** WRITE YOUR OWN GAMES! **Multimaze** is an enhanced version of "maze 'n' chase" games. It allows the user to: • create his own maze using menus and function keys • choose the number and speed of micromen and ghosts • play a competitive two person game with two micromen. Req.: 128K, 1MB, graphics, and opt. joystick. \$39.95. **MICROMAN INCORPORATED** P.O. Box 415 Acton, MA 01720 (617) 263-9149

#### BRIDGE SOLITAIRE

Improve your bridge. Play rubber or duplicate bridge, or simply watch the computer play. Hands can be randomly generated, repeated or input. Program gives insight into play on request. Scoring is automatic. Specify for IBM PC or VICTOR 8000. Dealer calls welcome. U.S. inquiries. Just mail \$34.95 (\$39.95 CDM) to: **DEALERS CHOICE SOFTWARE** P.O. Box 332, Shelton Ct. Kitchener, Ontario N2G 3Y9 (519)-884-1629

#### THE ETON GROUP

The entertainment set. This introductory set includes target and horseshoe plus 3 other games. The set includes complete instructions, is menu-driven & very easy to use. Requires 64K, 1 disk and a printer. Price \$29.95 + \$2.50 s/h. CA residence add 6% tax. MC/VISA ok. Co. purchases entertainment & business software! **THE ETON GROUP** 180 Keller St. Palmdale, CA 93552 (800) 358-9092 in CA (800) 862-4902 ext. 121

#### GUNBOATS ADVENTURE

ENJOY HOURS ON and of fun and adventure as you seek out and destroy the enemy fleet of ships. But, beware, for every missile that you send whizzing across the computer screen you get one back. Wastes little time in sinking you once it scores a hit. \$18.50. 48K monochrome or color display.

#### WINDOLAR SOFTWARE

5485 Candlewood Circle, Suite 8 Anaheim, CA 92807 (714) 779-2584

#### PROFESSIONAL 21 TUTOR

**FRIENDLY 64K** program teaches 21. Beginners and professional card counters get fast feedback on play, results and mistakes. Gives tests, HELP & tables. ALSO A READABLE (!) book with new tips and ideas. Program \$60. Book \$20. Or send \$2 for catalog with details on all **BLACKJACK** products and credentials. PC, Apple & TRS. **DAVID EMANUEL** 4590 Fremont Lane Plano, TX 75075 (214) 867-5072

#### SFINKS PC CHESS PROGRAM

The number 1 USCF rated 1793, chess game for the TRS-80 is now available for your IBM PC. Featuring program mode, audio, opening book, takeback, save game, clock, printer, hints, superior color/monochrome graphics, **SFINKS** is unsurpassed! 64K disk, only \$49.95 plus \$2 S+H/MC or VISA. FL residents + 5% tax. William Park, Suite 24-B, 1105 N. Main St. Gainesville, FL 32601 (904) 377-4847.

**Cheapware™**

Features include: a complete reservations display board (in color), reservations booking and control, occupancy and management reports, unit fee maintenance and much more. Requires 128K, 2-320K drives, 80 column, DOS. Only \$850. Demo disk with documentation \$50. Write: HANSEN MANAGEMENT SYSTEMS, INC. P.O. Box 688 Kihei, Maui, HI 96753 (808) 879-9943

## Software/Graphics

#### COLOR ART/PAINT SYSTEM

**JOYPOINT: AN INTERACTIVE JOYSTICK BASED  
HIGHER-RESOLUTION GRAPHICS PROGRAM**  
• 16 color palette • Select brush size, shape • Use palette area to mix colors • Create 100% of custom color patterns and images • SAVE pictures to disk • Display from BASIC • Split screen and Full screen mode toggle • Soft include MIRROR IMAGE, FLIP, REDUCE • Compiled version on disk. Requires 64K, color adaptor and game adaptor. \$49.95.  
**PCOMPUTER PICTURES**  
53 Sherman Ave.  
Rockville Centre, NY 11570  
(516) 536-3953

**35mm SLIDE FROM YOUR PC**

**COMPUTER SLIDE EXPRESS** converts graphics produced on the IBM PC into brilliant 35mm color slides with color resolution 400% better than your monitor. Leave your printouts behind. Project yourself into the technology of tomorrow. Use high-resolution color slides at your next presentation. **COMPUTER SLIDE EXPRESS** \$6/slide. \$30 minimum order.

**VISUAL HORIZONS**  
180 Metro Park  
Rochester, NY 14623  
(716) 424-5300

**VERSAHWITER**

Complete drawing system for IBM PC includes digitizer drawing board and software—ready to use. Use digitizer to trace drawings to the computer screen. Features include draw & dot mode, fill & airbrush in 100 colors, add text, save and recall picture, dump graphics to printer, make circles, boxes, pie charts & bar graphs, create your own brush palette & more. \$299.00.

**VERSA COMPUTING, INC.**  
3541 Old Conejo Road, Suite 104  
Newbury, CA 91320-2178  
(805) 498-1956

## PRESENTATION GRAPHICS

Graphwriter is specifically designed for your presentation graphics requirements. Charts formats include pie, bar, line, text, scatter, organization, GANTT, "bubble", table and many other special purpose chart formats. With Graphwriter you get the chart you want, the way you want it. Starting at \$395.

GRAPHIC COMMUNICATIONS, INC.  
200 Fifth Ave.  
Waltham, MA 02254  
(617) 890-8770

## HALD-

Graphics subroutines that run under MS/DOS in PASCAL, C, ASSEMBLER, FORTRAN, BASIC, and APL+. Supports color & monochrome graphics devices & can be graphics interface to applications. Lines, arcs, circles, dithering, patterns, etc. can be created. World coordinates, fonts, image compression & animation features too.

**MEDIA CYBERNETICS, INC.**  
36 Columbia Ave.  
Takoma Park, MD 20912  
(301) 270-2272

### PLOT-10 GRAPHICS EMULATOR

PC-PLOT is a complete emulation of the TEKTRONIX model 4010 graphics terminal. The basic packages range from \$40 to \$75 plus optional plotter driver software. Write or call for a technical brochure.

**MICROPLOT SYSTEMS CO.**  
1897 Red Fern Drive  
Columbus, OH 43229  
(614) 882-4786.

## ADD CAD TO YOUR PC

...with Vector Sketch, a 2D graphics package that runs on the IBM PC, included is an electromagnetic digitizer (sizes from 11" x 11" to 42" x 60") for fast, efficient, data entry. Drawings are stored on disc, can be recorded on a matrix printer, or drawn by a pen plotter. Application: Space planning, flow charting, form, product, and graphic design.

GTCC CORPORATION  
1055 First Street Dept. SA1  
Rockville, MD 20850  
(301) 279-9550

## QUICKDRAW

is a text graphics painting that lets you create colorful screens on your IBM. Finished screens can be used directly in Basic, Pascal or C programs, or you can design your own slide shows (no programming necessary). Designed for both the casual user and professional programmer. Requires 64MB, color card. \$39.95.  
EXPERT SYSTEMS, INC.  
PO Box 9  
Redmond, WA 98052

## VIDEOGRAM

Create customized 16-color graphics for 35mm slide presentations. INC. Picture commands, tutorial, 24 brushes, magnification, 8 fonts, 7 shapes, built in slide show capability. Req: 128K, PC/DOS, Tecmar bd, color monitor. Personal use \$150; business \$300 (inc. FREE 1 yr. of updates & support). See article 6-83 PC.

SOFTEL, INC.  
P.O. Box 257  
Stoddard, NH 03464

**BOARDROOM GRAPHICS—\$25**

**ANALYTICAL SOFTWARE**  
10838 McCre Rd.  
Dallas, TX 75238  
(214) 340-2954

## EXECUTIVE GRAPHICS

Line, bar, pie graphs and text generation on HP-plotters. Quickly prepares charts for reports or overhead foils for meetings. Reads VisiCalc, MultiPlan or DOS files, or enter data directly. Menu-driven. Field tested. Professional quality software and support. \$175 US One year update service. MC, VISA, money order. U.S. Inquiries.

C.R. TOREN LTD.  
Suite 1060, 3700 Gilmour Way  
Burnaby, BC V5G4M1 CANADA  
(604) 437-3521

## PC CAD

A complete computer-aided design program for the IBM PC/XT includes graphics dumps, all coordinate geometry features, street design, and interactive graphics. Options include digitizers and HP plotters. For more information, contact your local Computerland or authorized IBM dealer for a demonstration. \$1,450.

**HOUSEMAN & ASSOCIATES**  
11771 Jones Rd.  
Houston, TX 77070  
(713) 690-5160

### P-PLOT GRAPHICS ROUTINES

Graphics subroutines for IBM Pascal & Fortran. Over 40 graphics, I/O, memory & screen utilities. Bests Basic 2.0 graphics, includes Bar-charts, Piecharts, Windows. Great tool for science, business, education, animation/sound for video games. High quality & competitive price, \$49.95 each. Specially compiled.

**LIVERMORE ASSOCIATES**  
P.O. Box 2435  
Livermore, CA 94550  
(415) 440-5436

## COLOGRAPHY™

THIS COLOR GRAPHICS EDITOR for IBM PC/XT lets you create color images on the screen with ease. It can be used by anyone for Business, Education, Programmers, Artists + Designers. Your next SW update is FREE! Requires IBM PC/XT, 128K, IBM Color Board, Floppy or Hard Disk, Color Monitor. PC-DOS 1.1 or 2.0. \$99.95

## COLOGRAPHY

CACTUS SOFTWARE INCORPORATED  
P.O. Box 880  
Peoria, AZ 85345  
(502) 242-7953

## Software/Hobbies

**ASTROLOGY SOFTWARE**

We have everything from high-accuracy calculation packages for professional astrologers to programs like ASTRO-SCOPE™, that print multi-page, natal, forecast, relationship and numerology interpretations for everyone. Programs print the chart and include a license to sell the copyrighted text output.

AGS SOFTWARE  
BOX 28, Dept. C  
Orleans, MA 02653

# The Rixon PC212A... The Perfect Modem For Your IBM® PC ...Only \$499

The Rixon® PC212A offers you the only 300/1200 BPS full duplex card modem with auto dial and auto answer that plugs directly into any of the IBM PC®\* card slots. Because the Rixon PC212A was designed specifically for the IBM PC, it is loaded with user benefits.

The PC212A eliminates the need for an asynchronous communications adapter card and external modem cable, this alone saves you approximately \$190. The PC212A provides an extra 25 pin EIA RS232 interface connector, a telephone jack for alternate voice operation, and a telephone line jack for connection to the dial network.

Without question, the PC212A is the most user friendly, most reliable, and best performing modem for your IBM PC. An internal microprocessor allows total control, operation, and optioning of the

PC212A from the keyboard.

A user friendly HELP list of all interactive commands is stored in modem memory for instant screen display. Just a few of the internal features are auto/manual dialing from the keyboard, auto dial the next number if the first

number is busy and instant redial once or until answered. In the event of power disruption a battery back-up protects all memory in the PC212A. In addition, the PC212A is compatible with all of the communication programs written for the Hayes Smartmodem™\*\*such as CROSSTALK™†Also available for use with the PC212A is the

Rixon PC COM 1,™‡ a communications software program (Diskette) and instruction manual to enhance the capabilities of the PC212A and the IBM PC. PC COM 1 operates with or replaces the need for the IBM Asynchronous Communications Support Program. The program is very user friendly and provides single key stroke control of auto log on to multiple database services (such as The Source™§), as well as log to printer, log to file transfer and flow control (automatic inbound or manual control). PC COM 1 is only \$49.00 if purchased at the same time as the PC212A. The PC212A comes with a 2 year warranty. For more information contact your nearest computer store or Rixon direct at 800-368-2773 and ask for Jon Wilson at Ext. 472.

## Plumping Up The Cursor

**Q:** Is it possible to increase the cursor scan size from the default values as specified on page 2-60 of the *Technical Reference Manual*? I know this can be done in BASIC by using the LOCATE statement, but when I return to PC-DOS, the cursor size returns to the default values.

I really prefer using the larger block size cursor instead of the 2-scan line cursor. My system has an IBM color/graphics adapter and a monochrome video monitor.

Charles T. Wheeler  
Chicago, Illinois

**A:** I agree with you. I think that the 2-scan line cursor is hard to find in a full page of text. The simplest solution I know of is to write a short assembly language program. You can do this by working in DEBUG as shown in Figure 1. (If you are using PC-DOS 2.0, you can use the inline assemble feature.)

What this program does is to call the IBM video BIOS call to let you set up the cursor block start and end. By changing the CH value you change the start line. By changing the CL value (say from 07 to 0D for a monochrome display adapter), you change the end scan line.

Once you have loaded the code into memory, perform the command "U100 10B" to unassemble (that is, display) the code. Examine it carefully to make sure you entered everything correctly. Now, save this code. First, change CX to tell how many bytes the program will require; the 16 bytes (10hex) set aside here is conservative. Then use the N command to give the program a name. Finally, enter W to write the program. You may then run the program at any time by calling it by name (in this example, the name is SCAN).

Take a look at page A-43 of the *Technical Reference Manual* for more information on the BIOS call number 10hex.

## File 510 Where Are You?

**Q:** Page 2-14 of the DOS 2.0 manual says, "The number of files on a fixed disk is determined by the amount of space allocated to DOS." What does this mean? I have an IBM XT with 128K and I get a "file creation error" for trying to create the 510th file on the unpartitioned fixed disk.

Manuel A. Espinosa

**A:** The sentence should read "The

# How FORTH level 2 makes your PC 412% more powerful

What used to take 40 hours can now be done in 7.8 hours — that's 412% — and it is only one way of measuring power. There are others — convenience, debugging ability, run-time, compile-time, memory size... name it! FORTH level 2 will increase your power because it provides an interactive, integrated environment which promotes immediate debugging and modular design. Other benefits such as real-time performance depend on the quality of the implementation. Not all FORTHs are equal, so compare before buying. This one is a subset of polyFORTH, designed by FORTH, INC., tested and proven in the field for more than 5 years.

At last it is available at an affordable price of \$149 — and features the following:

- **Multitasking**  
Any number of background tasks. Concurrent execution of monochrome and color monitor. Concurrent printer operation.
- **Compatibility**  
IBM DOS file interface utility allows access to files created under IBM DOS with FORTH's improved performance and power.
- **On-Line Documentation**  
As well as over 700 pages of supporting documentation including *Starting FORTH* by Leo Brodie and *360-page User's Manual*.
- **Turnkey-compiler™**  
Utility for making binary turnkey applications. Such programs can be resold without license fee under specific conditions.

## Options:

- |                         |       |
|-------------------------|-------|
| ■ 8087 support          | \$128 |
| ■ Data Base support     | \$75  |
| ■ Report Writer         | \$25  |
| ■ Documentor            | \$75  |
| ■ Multi-User capability | \$128 |
| ■ Graphics mode         | \$100 |

This is not a complete list and you may have questions not covered in this material — give us a call. We will address them and send you a brochure.

Act now! After all, if this is the right software tool for you, shouldn't you know about it?

## Forth Technology

432 15th Street ■ Santa Monica, CA 90402

**(213) 372-8493**

CIRCLE 239 ON READER SERVICE CARD

## PC TUTOR

number of files in the root directory of a fixed disk is determined by the amount of space allocated to DOS." A fixed disk could support up to about 100,000 files—if all the files were empty.

The root directory is limited to 512 files on the XT (509 files plus two hidden files and a volume ID). This is not a firm limitation caused by the size of the disk, but is determined by how many sectors the fixed disk BIOS is willing to allocate for the file directory. By using more sectors, the directory could have more file entries, but at the cost of longer searches for files, slower CHKDSK and DIR operation, and less efficient utilization of the hard disk.

If you need more than 509 files, investigate the subdirectory concept. If you create subdirectories by using the MKDIR command, you can greatly increase the number of possible files.

The number of sectors allocated to the disk directory is specified by an entry in the disk's BIOS Parameter Block (BPB). Take a look at page 14-20 of your DOS 2.0 manual for a short

summary of the BPB entries; page 14-28 includes an example on line 86. By changing the "WORD number of root dir entries," you could alter the allowed maximum. This would require a complete reformatting of the drive, however, by a function other than FDISK, so you would lose all of your existing files. Using this procedure with the XT is not recommended unless you are an extremely proficient software writer.

### Marginal Results

**Q:** I have a problem running WordStar on my Epson FX-80 printer. When I print a file, I do not get the standard page format. The top margin, instead of being 1/2 inch is more like 1 inch, while the bottom margin is so small that page numbers appear on the very last line.

Can you suggest a way of dealing with this problem?

Steven Muhlberger

**A:** Your problem has to do with setting the top of form for your printer. When

Enter the underlined portions in response to the prompt symbols on the screen.

```
A>DEBUG
-E100 B4 01 B5 00 B1 07 CD 10 31 C0 CD 21
-RCX
:10
-nSCAN.COM
-11
-Q
A>
```

This DEBUG procedure will create the following results:

ADDRESS	OPCODES	INSTRUCTIONS
0100	B401	MOV AH, 01
0102	B500	MOV CH, 00
0104	B107	MOV CL, 07
0106	CD10	INT 10
0108	31C0	XOR AX, AX
010A	CD21	INT 21

If you have PC-DOS 2.0, its inline assembly feature could be used instead of DEBUG to enter the above instructions.

Figure 1: Using a DEBUG procedure to create a larger block cursor.

# Build Your Own IBM-PC Compatible!

Here are the boards, assembly instructions and parts you need... plus full back-up service from Netronics!

Complete instructions show you how to build an IBM-PC compatible that can run ANY—not just "popular"—IBM PC programs!

Motherboard functionally duplicates IBM-PC features. IBM-PC compatible BIOS ROM plus five empty sockets for ROMs of your choice. Sockets will accept IBM PC PROMs or other PROMs.

Instructions include step-by-step procedure for transferring ROMs from a PC onto a floppy disk, which can then be mailed away for ROM duplication.

Board kits include printed circuit board, some hand-to-put parts, and detailed assembly instructions. Complete kits include printed circuit boards, all parts, and detailed assembly instructions.

Manuals only: \$5.00 per kit.

IBM-PC Compatible 16-bit Motherboard with IBM-compatible BIOS ROM: □ Board kit, \$49.95 □ Complete kit, add \$140.00

IBM-PC Compatible Keyboard in cabinet (wired & tested), \$229.95

544/256K Memory with serial port with DB 25 connector □ Board kit (544), \$19.95 □ Complete kit (544), add \$134.00 □ Each additional 64K (to 256K), add \$75.00

Four Drive Disk Controller with hard disk SASI interface, parallel printer port, clock/calendar □ Board kit, \$49.95 □ Parts for Four Drive Disk Controller, add \$130.00 □ Parts for Parallel Printer Port, add \$30.00 □ Clock/Calendar, add \$45.00 □ SASI Interface, add \$50.00 □ All 4 functions wired and tested, \$239.95

IBM-PC Compatible Color Board (for BAW) □ Board kit with ROM, \$49.95 □ Wired and tested, \$299.95

Printer/plotter Board with 64K buffer, clock/calendar, parallel printer ports □ Board kit with ROM, \$49.95

Modern Board, 300 BPS, direct connect/originate/automatic answer plus 2 serial ports □ Board kit with telephone company connectors, \$49.95

Power Supply □ Complete kit, \$179.95 □ Extra power for hard disk option, add \$20.00

□ Cabinet for PC, steel with brushed aluminum front panel and simulated oak cover, \$199.95

□ 5 1/4" Disk Drive, DSD (wired & tested), \$269.95

□ 10 Megabyte Hard Disk with controller & software (wired & tested), \$295.00

Netronics offers complete service department to customers.

## TERMINALS

(Terminals require ASCII keyboard and power supply)

□ Power Transformer for either terminal, \$9.95

SmartVid Deluxe Terminal, 80 characters by 24 lines, microprocessor controlled with editing, reverse video, more—□ Board kit (includes board, character generator, video controller, 28 system ROM), \$99.95 □ Complete kit, add \$300.00

FastVid Deluxe Terminal, 64 or 32 characters by 36 lines, board rate to 19 baud—□ Board kit (includes controller, character generator, and PROM), \$49.95 □ Complete kit, add \$50.00

## SPEECH

Electric Mouth Apple/5-100 Speech Board, with National NSC Digitizer speech chip—□ Apple/5-100 (Please check your choice) □ Board kit (with Digitizer and 150 word vocabulary set), \$69.95 □ Complete kit, add \$300.00 □ 2nd Word Set (150 words), add \$79.95

SpeakEasy Universal Talking Board, operates with computers and terminals or in the stand-alone mode. Uses same power supply as terminals (see above) □ Board kit (includes VORTRAX speech chip and system ROM), \$99.95 □ Complete kit, add \$60.00 □ Cable, add \$15.00

## S-100 DYNAMIC RAM BOARD

16K/64K RAM Board uses popular 4116 chips—□ Board kit (includes 6252 controller), \$69.95 □ Complete kit (16K), add \$79.95 □ Each additional 16K, add \$50.00

## ELF II BEGINNER'S PAK

ELF II is a complete 256 byte, fully expandable learning computer with excellent documentation that explains hardware and software fundamentals. Learn a program in machine language! Learn the essence of how all computers operate and "think"! If you can afford to think about an IBM-PC or IBM-PC compatible, you can't afford not to have an ELF II beginner's pak! □ Complete kit, \$19.95

## PC TUTOR

WordStar starts printing a file, it resets the printer. This automatically sets the top of form (page) based on wherever the paper is presently positioned in the printer.

If you make sure top of page is correctly set by moving the paper down a little bit before telling WordStar to print, you will find that both the top and bottom margins will be correct.

## Slow Printing

Q: I have a problem with WordStar. When I use WordStar with my PC and a Diablo 1620 printer, I find that printing is slower than if I use the PrtScn key, or the PC-DOS TYPE command, or even the printing commands of STSC's APL\*PLUS.

This problem usually is not so bad, but sometimes the print speed slows to about two characters per second! My local dealer did not come up with anything, so do you have any clues?

I use the MODE program to set the COM1 line, (which the printer is connected to, and to inform WordStar that the printer is a parallel device.

H. Martin Weingartner  
Nashville, Tennessee

A: This problem is not necessarily a WordStar problem. It sounds to me as if you might have an intermittent serial cable. Most DOS programs that work with a serial device expect the device to handshake with the computer. This means that the lines devoted to control (i.e., "Clear to Send") should signal the computer when the printer has accepted the last character.

However, the APL\*PLUS software is significant in that it does not require handshaking, since many of STSC's customers use three-wire cables, which have no Clear to Send lines. Since you use the MODE program to set up your serial port, WordStar is actually using PC-DOS to activate the printer. Thus, WordStar—and any other standard DOS program—does use the serial

cable's lines for handshaking.

The fix for your system is simple. Just purchase a new cable and try it out. It may even be that the printer connection is a little bit loose. Try pushing the plug in solidly.

In general, the best cables to use with serial and parallel ports are 25-conductor ribbon cables (the cable is a flat conductor cable with 25 wires in it). These are available from most dealers.

## Discouraging Disconnections

Q: My work requires considerable use of the Dow Jones News/Retrieval Service. Invariably, however, after using the service for 5 or 10 minutes, my PC disconnects from the service with an annoying two-tone beep. A flag comes up on the screen telling me to check connections, phone number, etc. Needless to say, there is no problem with connections and such—the system simply disconnects. What gives?

Dirk Vander Zee

A: There could be any of a number of reasons. These are the two most probable.

First, if you have a call-waiting service on your phones, then the beep that indicates call-waiting will disconnect a modem. If you must have call-waiting in your office, make sure that you keep one line free of this encumbrance.

Second, there are many parts of the world where the phone lines are so poor that interruptions are long enough to convince the computer system that the line is dead, and the modem will disconnect from the line.

If you suspect the problem is caused by the phone line's quality, you might wish to contact your local telephone company and talk to a service representative about leasing a data line. Data lines are specially conditioned for the demands made by modem communications, which are completely different from voice line needs.

The Independent Guide to  
IBM Personal Computers

# PC™ MAGAZINE'S FREE CIRCULATION INFORMATION

Learning more about a product that's advertised or mentioned in an article in this issue of PC is as simple as 1-2-3—and is absolutely free!

# 1

Print or type your name and address on the attached card. Please use only one card per person.

# 2

Circle the numbers on the card that correspond to the numbers at the bottom of the advertisements and articles for which you want more information. Key numbers for advertisers also appear in the Advertiser's Index.

# 3

Simply mail the card, and the literature will be mailed to you free of charge by the manufacturer.

Why miss out on any information? Subscribe today to PC, the Independent Guide to IBM Personal Computers and get 26 big issues a year for only \$29.97—only \$1.15 a copy! Check the appropriate box on the reply card.

Should you have questions or suggestions concerning anything editorial, feel free to write PC MAGAZINE, The Independent Guide to IBM Personal Computers, One Park Avenue, New York, NY 10016.

CIRCLE 179 ON READER SERVICE CARD

**If you use DOS,  
you need this program.**

Do a DIR. Look at the size of your program files. You are seeing wasted space. The **Realia Spacemaker™** shrinks your COM and EXE files. No more wasted space.

How it works: Uninitialized (binary zero) areas are compressed, and the relocation entries are eliminated. When executed, the program expands and relocates itself, recreating the original program.

**Realia Spacemaker™ \$75 (ppd.)**

Talk to DEC® equipment? Use the **Realia Termulator™**. Full VT100/VT52 emulation and file transfer capabilities.

**Realia Termulator™ \$95 (ppd.)**

# Grandfather FORTRAN

Known chiefly as a scientific programming language, FORTRAN has held its own in the computer work place for 26 years.

If you have been reading *PC*, you have probably read about the newer programming languages now available for the PC, such as Ada, APL, C, FORTH, and Pascal. At the same time, one of the major languages in computing, FORTRAN, has been receiving relatively little attention. This is due partly to the poor quality of the original IBM FORTRAN compiler for the PC and partly to misconceptions about this "grandfather" of programming languages in the microcomputer world. Actually, FORTRAN can be a very powerful microcomputer language that should be seriously considered by those wishing to move up from BASIC. I will explore some of the reasons you might choose FORTRAN. But first, FORTRAN's history.

FORTRAN, which derives its name from FORMula TRANslation, is 26 years old. It was developed by IBM in the mid-50s and the first version was released in April 1957. FORTRAN I was followed by FORTRAN II in 1958 and FORTRAN IV in 1962. Although originally developed for the IBM 704 machine, the language was so popular that it was soon adapted to most of the computers of the time. FORTRAN was the first computer language standardized by the American Standards

Association, which is now called American National Standards Institute (ANSI). The standard produced FORTRAN 66 (ANS X3.9-1966), which roughly matched IBM's FORTRAN IV. More than 10 years later, a new standard, FORTRAN 77 (ANSI X3, 1978), provided FORTRAN with enhanced features that overcame previous difficulties with text-type data. FORTRAN's input/output (I/O) capabilities were also adapted for use on interactive computer terminals. IBM supports this standard in its version VS FORTRAN for use on the mainframes. Although more code has probably been written in FORTRAN than in any other language, it still suffers from its reputation as only a scientific language. However, its flexibility has allowed it to be used for many general computing applications. It was used to create the Statistical Package for the Social Sciences programs (SPSS), which is used by many university researchers to analyze statistics for insights into social behavior. Its use in computer design packages has been an aid not only to architecture and engineering, but also to industrial and fine arts graphic creation. It has been used for computerized machine control in the manufacturing of

## NO REFLECTIONS ON YOU! with the SDC ANTIGLARE SCREEN

Look at the face of your CRT. Its smooth surface reflects light like a mirror. Room lights, windows, the keyboard, even your hands, clothing and jewelry may be visible in it. Prolonged exposure to these distracting reflections causes eyestrain and unnecessary fatigue.

The **ANTIGLARE SCREEN** from Screen Data Corporation has been judged by an independent insurance company study to be the best solution tested to eliminate glare. Factors considered were user productivity, reduction of fatigue, ease of cleaning, durability, adaptability and cost.

The **ANTIGLARE SCREEN** is not glass or plexiglass but a finely woven mesh of tough synthetic material. The mesh passes text and graphics information from the CRT through to the eyes while stopping light from other sources from reflecting back to you. At the same time, the appearance of the display is enhanced because characters appear against a dark rather than a light background.

The **ANTIGLARE SCREEN** can be attached in moments. Velcro buttons permit easy removal. No tools or disassembly of your display is required. Over 200 sizes are available to fit most displays.

The **ANTIGLARE SCREEN** is only 39.95 postpaid. Try it for 30 days. You must be completely satisfied or your money will be refunded. Most popular sizes are in stock for next day shipment. Be sure to specify whether you have a monochrome or color display.

### NEW **Power screen™** WITH SDC ANTIGLARE

The static field in front of the tube causes dust, smoke and pollen particles to move about more freely and increase eyestrain, irritability and fatigue. The new conductive **POWER SCREEN** completely discharges this static field. A metal strap connects it to chassis ground.

The **POWER SCREEN** is just 49.95 with the same 30 day satisfaction guarantee.

## LANGUAGES

automobiles and aerospace vehicles. The original game, *Adventure*, was written in FORTRAN at the Massachusetts Institute of Technology. And although the business world still relies heavily on COBOL, FORTRAN has been useful in programming the higher mathematics of business strategic planning and risk analysis. All branches of the United States military currently recognize FORTRAN as a suitable language for military programming.

FORTRAN is still growing. In the next few years a version—possibly called FORTRAN 8—will be written to include many of the advanced features that now are in Pascal and Ada without losing commonality with the existing FORTRAN standards. Thus, far from being left in the dust by the newer languages, FORTRAN will remain a major computing language in the decades to come.

### Unpopular with Micros

Yet FORTRAN has not been popular in the micro world. I believe this is due to several factors. First, it is a compiled language. Compiled languages, in contrast to interpreted languages, give up debugging convenience for gains in execution speed. It may take 10 minutes or more and a lot of floppy disk handling to compile a program on the PC. However, once compiled, this program will run 10 to 100 times faster, depending on the length and complexity of the original program. The execution of interpreted languages is slow, because an interpreter must translate each line of source code into machine language as the program runs. In compiled languages the translation is done once at the time of compilation and produces a separate "machine language" program that will be used for execution. Also, interpreted languages usually limit the size of the program and the amount of data that can be handled at any one time. Because program development of compiled languages requires considerable time and effort, there was little incentive to use them as long as interpreted programs were small enough that execution speed wasn't a problem. As the micro

world progresses into bigger and more complex programs, the use of compiled languages, including FORTRAN, will become more popular.

Another reason why FORTRAN never attained much status in the micro world is

**All branches of the United States military currently recognize FORTRAN as a suitable language for military programming.**

because it is defined by reasonably strict standards, and consequently, it was not easy to produce an effective version of FORTRAN for the early 8-bit micros. The mathematical and I/O library routines required large amounts of memory and left very little for the actual FORTRAN program. On the PC, at least 128K is required by all the known compilers to compile a FORTRAN program and fully support the language's capabilities.

The early users of micros seemed to be either very experienced computer buffs or new computer converts. The experts liked the newer, more powerful and structured languages like Pascal or the efficiency of Assembly language; the converts liked the easy-to-learn BASIC or application packages like *VisiCalc*. There wasn't a place for FORTRAN. As the field of microcomputing moves from the experimentation phase into the mainstream of the computing work force, a new and large group of professional programmers will be using PCs to do the work they once did on the mainframes. It's likely that these programmers will use major languages such as FORTRAN for the same reasons they used such languages on the mainframes.

For a new computer programmer who wants to progress from the interpretive BASIC into the professional languages,

the number of choices is confusing. Languages such as Pascal or Ada have a number of advantages, but FORTRAN has its merits, too.

First, it is easy to learn; FORTRAN provides its basic capabilities with as few instructions as possible (KEYwords or Reserved words). If producing your first program takes a semester's course, FORTRAN is too complicated a language for your current programming level. You can save yourself a lot of headaches by setting your sights a bit lower. However, for a BASIC programmer, little effort is required to learn FORTRAN; of all the programming languages, it comes closest to BASIC both in the form of the code and in the types of variables used.

A major difference between FORTRAN and BASIC is that BASIC has line numbers, while FORTRAN has none. FORTRAN statements are executed according to the order in which they are placed in the lines of code—one statement to a line, beginning in column 7. (This is not entirely true for optimizing compilers, but you can ignore this technicality.) In FORTRAN there are numbers that precede some statements, but they are called LABELS. Their function is to indicate the destination of logical branches like GOTO statements, to define a type of PRINT USING statement called FORMATS, and to locate the end of a loop. Labels appear only where they are needed and do not necessarily appear in numerical order. (This, however, is a very good programming practice which aids program readability.)

The data types of BASIC are available in FORTRAN. Integers in FORTRAN are assumed to begin with the letters I, J, K, L, M, N rather than ending in a percent sign (%) as in BASIC's. In FORTRAN 77, BASIC's string variables are called character variables and are slightly less convenient to use. FORTRAN can also have Logical, or Boolean variables, which can be assigned the values of either true or false. These variables are useful in making complex logical decisions in pro-

gram control. In addition, some versions also support Complex variables, which are needed for the mathematics of imaginary numbers.

The BASIC programmer should have little trouble understanding a FORTRAN program after only a few minutes of instruction, and learning to write FORTRAN programs wouldn't take much longer.

FORTRAN is easy to use, which will help you keep your programming neat and understandable. Programming should emphasize, rather than disguise, the logical flow of the program. If you cannot find the error and are convinced "it just can't be there," perhaps the complexity of the language is masking what the computer is actually doing. Any language should help the programmer to understand any other program in that language.

This has been one of the major complaints professional programmers have about BASIC and, to a lesser extent, about FORTRAN. FORTRAN's developers gave little thought to a programming language theory. Hence, FORTRAN can be abused. There is a dangerous possibility of assigning different variable names to the same storage location through the use of EQUIVALENCE and COMMON statements. With indiscriminate use of the GOTO branches, one can send a program into logical convolutions so complex that no one can understand the program's purpose. Not only are these programs hard to modify, they are prone to hidden errors of which even the programmer is unaware.

While FORTRAN's design permits poor programming, it also provides the capability to program in an understandable and structured way. The FORTRAN 77 standard restricts the branching into loops and provides the IF THEN ELSE (blocks IFs) structure, allowing for structured programming in much the same way that Pascal and Ada do. In a future issue of PC, I'll discuss more of FORTRAN's programming features and then take a look at some of the new FORTRAN compilers now available for the PC. ■

# THE INTEGRATED ACCOUNTING SYSTEM MAXI ACCOUNTANT

**Maxi Accountant - Designed to handle the business needs of tomorrow —  
"Today", and you don't have to be an accountant to use it.**

#### Features include:

Fully integrated modules -thirteen major programs contained within Maxi Accountant interact with one another allowing minimal disk handling or runs on any hard drive

Extensive reporting capabilities

Comprehensive, easy to use documentation - including tutorial

Technical support

#### Accounts Payable

- Check writing with automatic posting to Vendors and Bank Account
- Enter A/P invoices with automatic posting to inventory and purchase orders
- Supports partial payments, Aged A/P balances, and Earned discounts
- Monthly Check, Deposit and Petty cash register
- Complete Audit Trail
- Detailed Vendor Activity and Cash Requirements Report
- Uses same commercially available check forms as payroll
- Provides bank statement reconciliation

#### Payroll

- Weekly, Biweekly, Bimonthly, Monthly pay periods
- Complete GTR and YTD Pay Journal records
- Handles hourly, salaried and commission pay
- Sales commissions by percentage or dollar amount
- Only requires input of hours worked
- Automatic calculation of regular and overtime pay and all deductions
- 941A Quarterly State Report
- W-2 Forms printing
- Federal and all State Tax Tables
- Personnel information file
- Uses same commercially available check forms as Accounts Payable
- Comprehensive YTD information printed on employee check stub

#### Accounts Receivable/ Order Entry

- Alphabetical and numerical sorting of customers
- 500 customers and up to 3000 transactions per 320k diskette (Unlimited number of diskettes allowed)
- Extensive customer information file
- Flags Credit limits and overdue balances
- Invoices from sales orders support backordering system
- Invoices for point-of-sale
- Multiple Price discounts and Sales tax rates
- Sales orders with packing slips
- Supports partial payments, finance charges, aged balances, and statements
- Supports special sales packages [bill-of-material]
- Supplies telephone number and contact name for overdue accounts
- Detailed transaction Audit trail
- Customer Activity Report
- Open Item Balance Forward
- Calculates Sales Commissions for payroll module
- Allows Sales of assets
- Allows sales of non-inventory services

#### General Ledger

- Chart of accounts
- Itemized monthly Journal transactions
- Asset depreciation, Complete G/L Reports, Daily Journal, Trial Balance, Operating Statement and Balance Sheet
- Supports up to 9 separate Profit Centers

#### Inventory Control

- Provides ON LINE information to all other modules
- Purchase orders with review or automatic ordering mode
- Complete backordering system included
- 25 items per bill-of-material
- 1500 stock items per 320K diskette with automatic advancement to next diskette
- Complete Vendor information file
- Calculates reorder quantities and displays lead times
- Physical inventory using average cost method adjustments
- Reports in inventory module include: Complete Inventory Report, Sales Analysis, Reorder Report, Purchase Order listing, Sales Package listing, Summary, and Labels

Maxi Accountant is designed for MS-DOS systems, including IBM PC and XT, Zenith Z-100, Victor 8000, Texas Instruments PC, Compaq, Compaq Hyperion, Corona, Eagle PC, and Rainbow 100.

CIRCLE 101 ON READER SERVICE CARD

# The Source For Magazines

Two electronic magazines, *Real Times* and the *IBM PC Gazette* are now available to Source subscribers through an option called "User Publishing."

The electronic universe can generally be divided into two broad areas: information and communication. But there is a third area that is more or less a hybrid of the two. In addition to the official services and features offered by The Source, CompuServe, Delphi, and other information utilities, a subscription to any of these services also gives you the opportunity to make contact with experts and other individuals scattered across North America—people you would never meet any other way.

This type of opportunity is an aspect of the services that is rarely featured in the ads for the information networks—probably because its value can't easily be condensed into a few lines of advertising copy. But among experienced database users, these services are one of the main advantages of going online. Given the complexity of our computers and all the things we want to do with them, and given the dearth of solid information, the easy availability of online expertise can be a godsend.

## A Bonus for PCers

IBM PC owners are particularly fortunate, for in addition to a number of reservoirs of non-machine-specific microcomputer information, there are quite a few individuals dedicated to providing tips and advice about the PC, the XT, and the

PCjr. One such reservoir is the User Publishing area of The Source. Among its offerings are two IBM-specific electronic magazines.

User Publishing contains features, services, and creative efforts offered by individuals. The Source provides the mechanism, but the individuals, and in some cases companies, provide the content. Together there are about 25 features (the most popular is "Dial-A-Date," a sophisticated computerized matchmaking service). The Source charges the information providers for storage, but it also pays a royalty of from 10 to 17.5 percent of the billable connect time its subscribers spend using a particular feature. For Source subscribers there is no additional charge for accessing User Publishing.

You can get into the User Publishing

area either by choosing the "Creating and Computing" option from The Source's main menu, followed by "User Publishing" from the succeeding menu, or by typing PUBLIC at The Source command level (→). Once there, you'll find *The IBM PC Gazette* and *Real Times Magazine*. To go directly to the *Gazette*, type PUBLIC 114 DIRECT at the Command Level. For *Real Times*, you type PUBLIC 117 DIRECT.

Both publications offer menus with table-of-contents format and instructions for reading the various articles. Unfortunately, the *Gazette* seems to be more than a bit moribund. It has not been updated in over a year, so don't run up your bill reading the out-of-date information. Instead, concentrate on two of the *Gazette*'s seven features. One of these, "POST SCAN IBM," consists of many of the notices that appeared on The Source IBM bulletin board (POST) during 1982. (The Source automatically purges its bulletin boards every 2 weeks.) Because each notice contains The Source account number of the person who posted it, it is possible to contact the individual via SourceMail in case you want to further investigate a particular topic.

The other feature is a *VisiCalc* breakdown analysis model or template. When you type in the labels and formulas needed to create a *VisiCalc* spreadsheet and then

# SMARTKEY II<sup>™</sup> IS STILL #1

### A Magazine in Real Time

*Real Times*, the second IBM-specific magazine, is about as vibrant and up-to-date a publication as you will find anywhere. Currency is a matter of pride on the part of its editor and creator, Tom Kashuba. Within hours of the announcement of the XT, for example, *Real Times* had a complete description and analysis online and ready for its readers, making it the first

Real Times is about  
as vibrant and up-  
to-date a publication  
as you will find  
anywhere.

publication in North America to carry news of that computer. And because Kashuba is a computer professional who spends his regular working hours laboring in the microworld vineyards, the coverage offered considerably greater depth than the parroted press releases found in much of the conventional media. *Real Times* did the same thing when the PCjr was announced last November.

For example, on the subject of PC-PCjr software compatibility, Kashuba noted that at the time of the announcement the PCjr did not support a monochrome

## TELECOMMUNICATIONS

screen, making it impossible to use PC software designed for that type of monitor. He also noted that the bus expansion slot on the right side of the unit would enable independent firms to supply the second disk drive and other "missing pieces" that separate the PCjr from a stripped-down PC. "Once the independents understand the bus protocols, adding more memory or

Future plans include a keyword searchable database of manufacturer's names and addresses.

a second drive shouldn't be difficult at all," Kashuba said. This is the kind of information you won't find in the conventional press and, due to the lead time required to produce a magazine, you might have to wait weeks for it in a computer publication.

In addition to fast-breaking news, you'll find a multipart tutorial on telecommunications, commentary on the industry in general, and the IBM PC Forum, a column designed to help readers with the technical questions they submit. Of special note are articles by Larry Magid, a respected computer writer and consultant whose byline you've probably seen in many print publications. You'll also find BASIC subroutines and other programs you can use. A recent issue included a subroutine to print the date, time, and program title on the top line of the screen, while painting the bottom two lines in inverse video for use in displaying program status and error messages.

Future plans include a keyword searchable database of manufacturer's names and addresses, cross-referenced by product, as well as continuing features on the state of the art. One column currently in

# NOW YOU CAN TEACH YOUR PC TO DRAW.

Just slip in your AutoCAD™ graphics software disc and you're ready. Draw a brick and AutoCAD will draw you a wall—automatically.

Move it. Copy it. Modify, rotate, or scale it vertically and horizontally. Store it. Change your mind and erase it.

Do it all on your PC. AutoCAD is the industry standard. It's compatible with most any PC. IBM PC and XT. Zenith Z100. Victor 9000. NEC APC. Columbia. Eagle PC. Not to mention CP/M-80 computers.

It's just about ready for NCR Decision-Mate, DMS, DEC, SONY, Televideo, Eagle 1600, Texas Instruments and Corona.

And it supports a bunch of input and output devices.

You'll work better. And easier. Use a light pen and on-screen menus. A digitizing tablet. A keyboard or a mouse.

Use them to draw lines. Of any width. Circles, arcs and solid-filled areas. Insert them anywhere in your drawing.

And do it in German. Or French. Swedish is coming.

You won't flinch at the price. It's good. Real good. \$1,000. Add another \$500 and you get advanced drafting extensions.

Ask around. You'll find a lot of people know AutoCAD. We've already shipped more than 1,500 systems. All over the

country. All over the world. And you wouldn't believe who some of our customers are.

Architects love it. So do engineers. So do designers. So will you.

You wouldn't have a PC without a word processor. Or without a spreadsheet. Or without AutoCAD.

## TELECOMMUNICATIONS

the works, for example, will deal with new PC-compatible drives capable of storing 2.3 megabytes or more on an ordinary floppy disk. Other databases accessible via UNIX or DOS 2.0-like submenus or "directories" are also planned. As Kashuba put it, "Ultimately, *Real Times* will offer a mini-Source within The Source."

*Real Times* carries an average of seven columns a month and is updated on a weekly basis. The magazine's menu will tell you how long it takes to transmit each article at 1200 baud. If you have a 1200-baud modem, this is definitely the way to

### Real Times is updated on a weekly basis.

read *Real Times* since downloading a given page of text at 1200 baud will cost you an average of nearly 70% less than if you are communicating at 300 baud. Save the file to disk to be read or printed out later, after you have signed off The Source and the meter is no longer running.

### Helpful Hints

The first time you access *Real Times*, it's a good idea to answer "Yes" when you are asked whether you want to read the main help file. Kashuba has written his own "front end" software for his magazine, and in addition to the standard Source commands, it supports a number of other features. Finally, when you've finished reading either the *Gazette* or *Real Times*, respond to the prompt that allows you to leave. This will return you to the User Publishing menu. Type QUIT at the menu's prompt to get out of this area and return to The Source command level. At the point you can type MENU to return to the main menu or enter another command.

In a future issue of *PC*, I'll explore the "Special Interest Group" on the ComputerServe system. ■

## Save space, improve ergonomics and system life.

The SS-I System Stand by Curtis offers you more freedom of arrangement. Reduces the systems unit footprint by 54%. Use less desktop space, or no desktop space at all — put it on the floor! It feels great. Also, with less disk drive wear in the vertical position, systems unit can be expected to have a longer life and less down time with the SS-I.

Get the sturdy SS-I and stand your systems unit on its ear — it feels great and lasts longer.

### Re-arrange your IBM PC ... comfortably

Developed exclusively for the IBM PC, all Curtis products have a lifetime warranty and are a perfect PC match in color, style and finish.

# PROGRAMMER'S GUIDE TO CP/M

EDITED BY SOL LIBES

Here's a collection of CP/M insights that you'll never find in any CP/M manual. CP/M is the most popular microcomputer DOS in use today. Programmer's Guide to CP/M tells you how to get around apparent limitations of a CP/M system and why CP/M is for more versatile than you might have imagined. Every article in Programmer's Guide to CP/M originally appeared in MICROSYSTEMS between January 1980 and February 1982. Except for the collection, these articles are now unavailable! Programmer's Guide to CP/M gives you an in-depth look of CP/M from the viewpoint of the programmer.

Contents include: An Introduction to CP/M, The CP/M Connection, CP/M Software Reviews, CP/M Utilities & Enhancement, CP/M B6 and CP/M Software Directories \$12.95

Also available at your local bookstore or computer store.

## MICROSTAT® Advanced Statistics Package

MICROSTAT® is an interactive, file-oriented statistics package that includes:

- Data Management Subsystem for file creation. Allows editing, sorting, ranking and transformation of data.
- Descriptive Statistics, Hypothesis Testing, Frequency Distributions and Histograms, ANOVA, Nonparametric tests.
- Correlation and Regression (including stepwise multiple regression), Time Series, Scatterplots.
- Crosstabs, Chi-square tests, Factorials, Permutations, Combinations, and eight Probability Distributions.

MICROSTAT® has been the most popular statistics package in the microcomputer market for the past three years and is now available for the IBM-PC.

Requires PC-DOS and 64K memory but can utilize more memory if available. Dual disk drives recommended.

The price is \$325 and the user's manual \$25. To order, call or write:

# Stopping The Mask Pirates

Congress is currently considering legislation that will extend existing copyright protection to the templates used in the manufacture of integrated circuits.

**P**atent law as interpreted by the courts protects the basic circuitry underlying microprocessor chips; copyright law extends protection to the object code contained in ROMs. Neither method of establishing and safeguarding intellectual property rights offers adequate protection for the design works—called “masks”—that are involved in the manufacture of integrated circuit chips.

Numerous court cases have dealt with the ability of copyright laws to protect programming as diverse as computer chess and the Apple operating system (see the report on the Court of Appeals' decision in *Apple vs. Franklin*, *PC*, Volume 2 Number 7). The courts are attempting to extend copyright protection to operating system programs, applications programs, and object and source code. But none of this legal activity helps the original manufacturer of a microprocessor chip. The circuitry or architecture underlying a microprocessor or other integrated circuit component does not fall within even the most liberal interpretation of copyright protection.

The underlying architecture of a microprocessor is covered by patents, however. But timing is a problem. By the time a patent is issued, following an extensive examination by the Patent and Trademark Office, the microprocessor may be obsolete. This gap in the laws—the inapplicability

of copyright law and the undue delays in patent procedures—has created the potential loophole that puts chip copiers in business. The element most vulnerable to copying is the mask, a template that contains the chip design and defines the pattern of the various layers of deposition materials forming the integrated circuit. Following initial layout, each mask must be tested and revised several times before it is finished. This burden of testing and

revising is multiplied by the number of masks the chip in question requires. A chip with six etching and deposition steps during manufacture, for example, requires six different masks. Thus an original, proprietary chip may entail years of development time and millions of development dollars.

In contrast to legitimate manufacturers, whose research and development expenses are substantial, pirates can “knock

# How to use computers to teach math!

## COMPUTERS IN MATHEMATICS:

### A SOURCE BOOK OF IDEAS

Now that more and more math departments have access to a micro-computer, the problem becomes: How to use the computer effectively as a teaching aid?

Here's where **COMPUTERS IN MATHEMATICS** can help you. This book of reprints from *Creative Computing* magazine is a goldmine of learning ideas, problem-solving strategies, programming hints, puzzles, brain teasers, and much more!

**COMPUTERS IN MATHEMATICS** covers nine subject areas:

- Computer literacy and computers in society.
- Thinking strategies and how to solve problems.
- Computer simulations and how to write them.
- Probability.
- Mathematical miscellany, from circular functions to differential equations.
- Art and graphics and their relation to mathematics.
- Computer Assisted Instruction (CAI).
- Programming style.
- Puzzles, problems and programming ideas.

8 1/2" x 11", softcover, hundreds of black-and-white diagrams and illustrations.

In all, **COMPUTERS IN MATHEMATICS** contains 77 fascinating articles, over 200 problems for assignment, and nearly 100 programs. Edited and with a preface by David H. Ahl, Editor-in-Chief of *Creative Computing*, this immensely practical volume is an invaluable classroom tool for teachers and students of all grades.

## ISSUES

off" copies of a chip at relatively low cost, using photographic dissection of the device layers. With several months' work, they can flood the market with clones and undersell the original manufacturer.

The original manufacturer's effort and investment of time and money are put in serious jeopardy if the mask is not proprietary in the eyes of the law. And in fact, it is not.

Copyrights do not cover mask works, and the Copyright Office does not accept such works for registration, contending that the masks are more in the nature of a machine than a work of art.

The problem is that copyrights protect "writings of authors" and have been specifically precluded from covering the function or utility of a device, which is within the domain of patents. For example, an originally contoured circuit housing might be copyrightable if the shape is considered ornamental as well as functional. But if the shape of the housing is intended to improve heat transfer, a patent, not a copyright, is the proper form of protection.

Copiers of integrated circuit chips have argued that they are immune from prosecution since copyrights do not apply to chip designs, and, in many cases, the underlying circuitry is not patented. It has also been argued that any programming embodied by a chip is not protected by copyright law (this, incidentally, is no longer the case).

Many manufacturers of second-source devices are, of course, licensed by the primary device manufacturer. Recently, however, a number of foreign and domestic firms have gone into the second-source business without license, on popular chips such as the 8086 16-bit microprocessor.

### Lobbying Efforts

In response to lobbying by prominent organizations associated with the computer chip industry, including Intel and the Semiconductor Industry Association (SIA), a bill was introduced in Congress in 1978 to amend the Copyright Act of 1976

## ISSUES

to specifically extend copyrightable status to masks. Given the large number of chip developers and manufacturers located in Silicon Valley, it is not surprising that the bill was introduced by Congressman Donald Edwards and Norman Mineta of California. During hearings on the bill in the spring of 1979, it became clear that the chip developers and manufacturers were divided in two camps: Intel was a primary force in favor of the bill, whereas the opposition was headed by three firms, Fairchild, Texas Instruments, and National Semiconductor.

The opposition's principal argument was that masks are utilitarian objects that do not fall within the Constitution's provision for protection of "writings of the authors" upon which the copyright laws are based. Testimony drew attention to the potentially devastating impact of the bill on innocent purchasers of equipment containing a chip that turned out to be an unauthorized copy of a copyrighted one. A copyright suit could ruin an innocent purchaser who may have spent a substantial amount of money tooling up to use the equipment. In addition, the opposition had a legitimate concern for the preservation of a second-source market.

Parties in favor of the bill argued that chip developers should not be left powerless against pirates. Protection, it was argued, would encourage more investment in research and development.

As a result of some compromises and, possibly, because some former members of the opposition have been burned by pirates, there now appears to be substantial support for the latest version of the bill (H.R. 1028), recently reviewed by a House subcommittee.

The new version of the bill contains some compromises with respect to innocent purchasers of copyrighted semiconductor chips. In the event of a good-faith purchase of an unauthorized chip, it offers protection against infringement claims pertaining to any use or distribution before the purchaser had notice of the infringement. The owner of the copyright on a

## ISSUES

mask work must grant a nonexclusive copyright license to an innocent purchaser who would suffer a substantial loss if forced to discontinue use of the infringing work. The royalty amount, which the bill specifies as a "reasonable royalty for infringing products," will presumably be determined by the parties. The determination is likely to be based on what, under a given set of conditions, a willing buyer would pay a willing seller, or, if previous licenses have been granted, on what the "going rate" has been.

There are other improvements in the new version of the bill, as well. With what appears to be a realistic appraisal of the useful life of semiconductor products, the bill provides a 10-year copyright term for mask works embodied in either mask or chip form. The conventional terms of copyright protection, of course, are more than five times as long. Also, whereas the earlier version of the bill clumsily attempted to characterize a mask as something like a pictorial, graphic, or sculptural work, the new version contains a more particularized and realistic definition. And finally, the bill specifically provides copyright protection for a chip made from a copyrighted mask as well as for the mask itself.

Opposition to the bill, though small, is principally directed against the "piecemeal" approach of grafting chip protection onto the copyright laws and the potential blurring of basic copyright principles that covering functional devices may cause.

H.R. 1028, if passed, will help protect the substantial investment for research and development made by innovative firms. At the same time, pirates will be put on notice that Congress is ready to put teeth in the copyright laws to prevent illegal chip copying.

Despite some legal bugs, which should be corrected by the Senate version of the bill, the House bill represents a potentially effective and reasonable approach to preventing chip piracy without placing undue burden on the market. ■

# ANNOUNCING THE MASTER DIRECTORY— THE COMPLETE GUIDE FOR YOUR IBM PC OR XT

**Over 500 pages  
of listings for  
IBM-compatible  
hardware,  
software,  
accessories and  
services—from  
the publishers of  
PC Magazine...**

There are literally thousands of different products on the market that are compatible with your IBM PC or XT. And new ones are being introduced every day.

How do you find the ones you need? How do you decide which ones are best for you? With PC Buyers Guide.

#### **Thousands of products in one convenient source.**

The publishers of PC Magazine have organized the myriad of IBM-compatible products, services and support items into one comprehensive, easy-to-use guide. It's the quickest and most reliable way to put your finger on exactly what you need to enhance the usefulness of your computer.

Every product in the directory is fully and accurately described. You'll find out what it is, what it does, how much it costs, and where to get more information about it. You'll know what level of skill is required—novice, intermediate or technical. And everything is cross-referenced so you won't miss a thing!

#### **Get more from your PC or XT**

The documentation you received from IBM is only the beginning. Finding the right software and hardware is what really makes the difference in how effectively you

IBM PC or XT performs. That's why this kind of complete product information is indispensable.

And in addition to thoroughly covering hardware and software, PC Buyers Guide includes details on all the important extras:

- Accessories
- Supplies
- Furniture
- Books
- Periodicals
- Consultants
- Maintenance and Support
- User Groups
- Bulletin Boards
- Professional Societies

The more complete your knowledge is about what's available for your PC, the more sophisticated a user you'll become.

And the more you'll get from your computer.

#### **Order your copy today**

Demand for PC Buyers Guide is great, so be sure to order your copy now. Simply fill in the coupon below and mail it today.

MAIL TO:

## PSYCHE™ TALKS BACK

### NOW YOUR PC WILL TALK BACK TO YOU

FINALLY A REALLY NEW MODERN ARTIFICIAL INTELLIGENCE PROGRAM. Written especially to capitalize on the speed and power of the IBM PC, PSYCHE will hold a delightfully real keyboard conversation with you on 60 subjects, including marriage, work and sex. PSYCHE's responses are so on target you will find yourself thinking of PSYCHE as an actual person.

**Psyche's Responses** are grammatical, stimulating, provocative and to the point. It's hard to believe PSYCHE isn't a real person.

**Talk It Over With Psyche**, instead of your friends. PSYCHE will always listen quietly and never gossip. Tell PSYCHE anything.

**Psyche is Fun & Educational.** Suitable as a Rogerian Counseling teaching aid, PSYCHE creates responses that are reflective, nonjudgmental and nondirective.

**Psyche Usually Stays With Your Feelings**, like a real therapist, and never judges you, or hands out gratuitous advice. PSYCHE has unlimited time and patience.

**Psyche Is Powerful.** PSYCHE knows 1000 significant words and draws on almost 500 responses. 150K Program and files. NOT A GAME.

**Teach Psyche More.** Simple menus let you expand or edit the vocabulary and responses on-line with no programming.

**Save & Print Conversations** and compile statistics. Machine language gives rapid responses. Seven page manual included.

**Show Off Your Computer.** Invite your friends to talk with PSYCHE about anything at all. PSYCHE will even GREET THEM BY NAME.

**AFFORDABLE PRICE \$50.00**

PHONE OR MAIL: VISA, MASTERCARD OR CHECK  
Shipping & Handling \$2. Florida residents add 5% tax.

## COMING UP

A LIBRARY OF SOFTWARE PROGRAMS FOR THE IBM PERSONAL COMPUTER

# PC DISK MAGAZINE

### Mini-QuikPro (Part I of II)

A program that writes BASIC programs. Describe your information to it, and programs are created to store and maintain that information (Part I), as well as report it (Part II).

### Pie Charter

The third Euclidean element in our series of standalone, automatic graphing programs.

### Bibliographer

Keep a bibliographic reference file of media items that interest you. Recall them by topic.

### Transparent Sort

Learn a sorting technique (the Shell/Metzner sort) through a step-by-step presentation and explanation of an example in BASIC.

### Early Reader

A reading and spelling primer built on clear, vibrant displays.

### Sort/Merge (Part II)

The complement to *PC Disk Magazine's* text file utility; a pair of routines to operate on fixed-length record files.

### Economic Pie

Put your economic convictions to the test in this game of pie shop management.

### Oenophiliac Dossier (Part I)

The secret life of grapes—a reference file of wine ratings.

### ► Pascal and C Programmers

► Blaise Computing's productivity tools allow Pascal and C programmers to develop reliable software taking full advantage of the capabilities of the IBM PC and XT. Support for Microsoft and IBM Pascal, Microsoft (Lattice) C and C-Clie is provided.

#### TOOLS

All Source Code is included

Total string capability, complete screen access, keyboard handling, a graphics interface, access to all BIOS functions, and much more are provided in over 40 routines.

#### TOOLS 2

All Source Code is included

A general DOS gate allows you to access any DOS 2.0 function from Pascal or C. Program execution and DOS internal command execution are supported as high level calls.

#### VIEW MANAGER

Source Code available

VIEW MANAGER is a screen support system of a mainframe for the IBM PC/AT. Screens are constructed with a true Screen Painter supporting any attribute or color, and the screens are stored efficiently in a Screen Database. VIEW LIBRARY supports access to screens and true block mode data capture and display from application programs.

### Comparing Expansion Chassis: Alternative Methods Of Upgrading to Hard Disk.

Expansion chassis from IBM and Tecmar, and the Apparatus fixed disk with the Ibus expansion chassis.

### Guide to Using the IBM Game Adapter.

An overview of the game adapter's hardware and operation, with applications. Also, various ways to monitor the game adapter state from BASIC and to read game adapter input using assembly language.

### Nestar's PLAN 4000: An Overview.

A big step toward bringing maturity to the IBM PC local networking market, this system is a baseband logical ring network, with token-passing access control.

### Database Management from a Spreadsheet Perspective.

Recent developments that involve extending data handling capabilities available to the user: inter-spreadsheet linkages, pseudo tables within a spreadsheet itself, and coupling spreadsheet processor and data management systems into one package.

### Monochrome Boards.

A comparative review of the Hercules Graphics Card and the Orchid Technology Monochrome Graphics Adapter.

### Real-Time Analysis of Simple Digital Logic Circuits.

Using an IBM PC equipped with parallel port and a game adapter card to perform real-time analysis on a simple digital TTL circuit.

# Your IBM PC's Freeway to the Future

3270  
Coax

Micro-mainframe  
link

SPEED UP  
2.35  
Mb.

Your IBM Personal Computer — or PC-XT — can access your IBM mainframe's data base and accomplish file transfers through existing 3270 coaxial network. Easily, inexpensively. There's a family of Forte products for the micro-mainframe link. Plug a Forte board into an expansion slot in your IBM PC — remote or channel attached and linked via BSC or SNA/SDLC — and you've put your PC on-line with your host via coax. To the host, your PC is a 3278/3279 terminal, but functionally you have standalone computing power in a high-performance intelligent workstation.

**Forte products for the micro-mainframe link are totally soft-loaded, and enhancements will be diskette-based.**

Such Forte upgrades as new terminal emulations and custom file transfers will be on diskette, so your investment today is protected. Right now, Forte products provide such delights as switch-selectable address selection, field-configurability of PC elements such as keyboard changes, program symbols, full-color graphics, menu-selected file transfers, and access of full-screen host applications. There's lots more, too, including parity and remote dial-up of the host via coax. All the reasons for a micro-mainframe connection for your business are compelling today. They'll be essential tomorrow. We can help you put your IBM Personal Computers on the Freeway to the Future now. Ask about it. That's our Forte.

# 14 REASONS WHY THE PARADISE MULTI-DISPLAY CARD IS SELLING FASTER THAN WE CAN MAKE THEM.

1. More performance, dollar for dollar. Paradise Systems, Inc. delivers a color display controller, monochrome display controller and printer interface all on a single card.
2. Compatible with IBM® PC/XT and the best productivity software. You can work with all the great IBM productivity packages, like Lotus 123™.
3. Standard monochrome display with no additional software: Fully IBM compatible. All the clean, fully-formed characters you'd expect from IBM.
4. High-resolution color graphics: Fully IBM compatible. 640 × 200 black and white; 320 × 200 medium resolution; 4 colors.
5. The best working display available for IBM. Flicker-free scrolling—even in color.

6. External switch for easy selection of monochrome or color mode on system startup without having to open the machine.
7. Switches easily between monochrome and color modes under software control.
8. IBM character sets and text modes.
9. Paradise delivers character sets identical to IBM offerings. (9 × 14 character box for monochrome and 8 × 8 character box for color/graphic modes.)
10. Built-in fully compatible IBM type printer port.
11. Use two cards for simultaneous display. Two Multi-Display cards—or one in conjunction with an IBM video card—give you the ability to perform simultaneous display on two screens.
12. Individually selectable horizontal and vertical sync polarities: Compatible with the widest range of RGB monitors.
13. Illustrated manual with step-by-step instructions.
14. Fully IBM compatible light pen and RF modulator ports.
15. Separate connectors for easy function changes without changing jumpers. The Multi-Display Card has separate connectors for monochrome display; composite video; RGB video; parallel printer; light pen; and RF modulator.

It's no wonder the Multi-Display Card is in such high demand.

Look for the Multi-Display Card from Paradise Systems, Inc. at your local computer dealer. Call (415) 468-5320 or write to 150 North Hill Drive, Brisbane, CA 94005, for more information.

# DISK MECHANIC<sup>TM</sup>

The ULTIMATE Backup, Analyze & Repair Utility  
The Disk Toolkit! NO IBM PC Should be Without  
Protects Your Software Investment

## BACKUP TOOLS:

- Can Backup Most Every Diskette
- SUCCEEDS where others fail!
- Works Manually or Automatically
- Create "Protected" Diskettes
- Many Additional Analysis Tools

## SECTOR TOOLS:

- Examine/Print Sector Data
- Modify (ZAPI) Sector Data
- Compare, Copy & Zero Sectors
- Search Sectors For Data

## FILE TOOLS:

- Show Disk & File Allocation
- Display & Alter File Data
- Repair Damaged Disks
- Recover Erased Files
- Alter "Hidden" Status
- Search Files For Data

## HACKER TOOLS:

- Modify Floppy Disk Controller Parameters
- Supports All FDC R/W Commands

DISK MECHANIC works with all standard IBM PC disk formats including "protected" diskette with mixed track and sector sizes, blank and high track formatting, CRC errors, and single or double sided drives. DISK MECHANIC requires an IBM PC with 128K of memory or COMPAQ with 162K of memory, DOS 1.10, and 2 floppy disk drives. DISK MECHANIC includes a detailed 48 page instruction manual. To Order DISK MECHANIC send check or money order for \$79 plus \$2 for shipping (Mass. res. add sales tax) to: MLI MICROSYSTEMS, Box 925, Framingham, Mass. 01701 or Call (617) 926-2055 for Mastercard or VISA orders. Dealer/Distributor inquiries welcome. © 1983 MLI MICROSYSTEMS.

## BasicWindow<sup>™</sup>

Screen Generation Systems For BASIC Applications

### Don't Waste Time Programming Screens!

BasicWindow is a productivity package that streamlines  
your application development activity with powerful design  
and programming tools.

BasicWindow is a total package that integrates all screen generation functions. It consists of:

1. A powerful **Screen Editor** which lets you design program screens, including graphics and color
2. A **Macro Language** and **Macro Compiler** to provide an integrated programming interface to the screen driver routines
3. A powerful **Screen Driver** which is easily merged with your application program to control screen processing
4. A complete manual and reference card

If you develop BASIC applications on the IBM PC, IBM XT, or selected compatibles, you can't afford to be without BasicWindow. You also need 385 1.1 or 2.0, 64K RAM, One Disk Drive, 80 Column Display, Optional Printer, and BASICA (for your application)

For a complete description, please contact:

# Coming Up In PC

## **dBase II Roundup.**

PC takes a close up view of *dBase II*. We'll have an introduction to *dBase*, plus reports on *dBase* applications, expanders, program generators, and learning aids—and a comparison of *dBase II* with BASIC. We'll interview Wayne Ratcliffe about the program he wrote, and ask George Tate of Ashton-Tate about the company he built by promoting the program. In addition, PC editors will tell you why they love *dBase II*.

## **PC Hotel**

If you're calling Ramada, the PC is in. The story of how a nationwide reservations network has been linked to PCs.

## **Computers and the Public Interest**

How lobbying groups like the American Civil Liberties Union (ACLU) and Americans for Democratic Action (ADA)—helped by the Public Interest Computer Association—are using micros to fight city hall.

## **Statpro**

A review of a major new package for statistical specialists who use PCs.

## **Game Reviews**

Just when you thought it was safe to go back to your PC: An intrepid reviewer wends his way through fantasy and horror in *Crush Crumble*, *Cyborg*, and *Cosmic Nightmare*.

## **PC at the Olympics**

Organizers in Los Angeles are working feverishly to prepare for this summer's Olympics, and PCs are involved.

We'll watch our favorite micro go for the administrative gold.

## **Taking Flight**

How is private business beating the U.S. Postal Service at its own game? And how does one of those private concerns seek to gain advantage over its competitors? Roving contributor, Mike Muskal, follows an overnight package on its appointed rounds and along the way discovers how the PC figures prominently in the hopes and dreams—not to mention the deliveries—of Airborne Freight Corporation.

## **PC Pilot**

A report on a new learning language designed to help students navigate the difficult shoals of computer programming.

## **DOSSier**

PC Tech Journal Editor-in-Chief Will Fastie offers his perspective on the frustrations of alternating between operating systems.

## **Shootout in Silicon Glen**

IBM has chosen Scotland as its base of PC operations for Europe, Africa, and the Middle East, so PC Magazine sent Special Projects Editor Paul Somers deep into the glens and high into the highlands to track down the story. In his report, our local hero sidesteps the black-faced sheep, the cattle, and the haggis—and doesn't get kilt.

## **Lotus Leaf**

We excerpt a chapter from a new book on 1-2-3, the do-it-all financial management package from Lotus.

## **Attention All Managers**

Reviews of *Decisions* and *Decision Analyst*, software to help managers make up their minds . . .

## **PC Dietician: In Business and Institutions**

You mean you can thank PCs for those wonderful menus you get in schools and hospitals? Sometimes, yes.

## **Printwriter**

There's still something you can do with products from the old Blue line. We'll tell you how to modify the IBM Model 50 typewriter to create a PC-compatible printer.

# Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • XEROX™

## The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

**VERSARECEIVABLES™** \$99.95  
VERSARECEIVABLES™ is a complete memorandum accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owns you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

**VERSAPAYABLES™** \$99.95  
VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check requests, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™ you can even let your computer automatically select which vouchers are to be paid.

**VERSAPAYROLL™** \$99.95  
VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

**VERSAINVENTORY™** \$99.95  
VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

**VERSALEDGER II™** \$149.95  
VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system without any additional software.

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VersaLEDGER II™ manual will help you become quickly familiar with VersaLEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

### SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$5 each, credited toward a later purchase of that module.

**To Order:** Write or call Toll-free (800) 431-2818  
(N.Y.S. residents call 914-425-1535)

- \* add \$3 for shipping in UPS areas
- \* add \$1 to CANADA or MEXICO
- \* add \$4 for C.O.D. or non-UPS areas
- \* add proper postage elsewhere

## The STB Graphix Plus: an affordable way to put a whole new complexion on your IBM PC or XT.<sup>™</sup>

You get color or monochrome graphics plus a parallel printer port, all in one slot.

**O**ur Graphix Plus multi-function video board gives you three of the most in-demand text and graphics capabilities for one very attractive price.

Graphix Plus includes functions for color or monochrome graphics and text displays, and a parallel printer. A clock/calendar is available as an option.

This versatile board will drive an RGB color monitor or composite B&W monitor with the identical colors, resolution and modes as IBM's Color/Graphics Monitor Adapter. Graphix Plus improves on IBM's adapter with 50% faster scrolling, which eliminates annoying flashing and flicker.

Graphix Plus also drives the IBM monochrome display, in graphics and high resolution text modes, and is compatible with Lotus 1-2-3<sup>™</sup>, Microsoft Flight Simulator<sup>™</sup> and other popular software. And, Graphix Plus provides for extended text capability.

Graphix Plus also includes a lightpen interface and PC

Accelerator, STB's super ram disk emulator and print spooler program.

For a graphic demonstration of how Graphix Plus can expand your personal computing capabilities, see your local dealer. For more information on the entire line of quality products, write or call us.

# ELAN™ From TECMAR

## The Most Powerful Local Area Network for the IBM PC

- Networking using Ethernet protocol
- Telephone support — autodial/autoanswer modem
- Voice recognition of commands and voice response
- Voice mail and messages
- Dictating system using Pearlcorder X-02 or XR from any telephone in the U.S.
- Complete software for written/voice mail, time management and audio/visual clock, calendar, and calculator functions
- Three ELAN Systems; the Secretary, the Manager and the Executive

The Executive

ELAN is designed to meet your total communications needs, including computer-to-computer (i.e., networking), person-to-computer, and person-to-person communication requirements for data and voice. The Industry-standard high speed Ethernet network protocol is employed in ELAN, permitting many IBM Personal Computers to be linked together by ordinary thin coaxial cable. In addition to his own computer, an ELAN system user can access the other devices attached to the cable — such as printers and large disks.

All versions of ELAN include an Ethernet interface with equipment to convert voice into data and back again. This enables the user to give and receive spoken messages from any location as well as store them for later use. In addition, with the Executive version, all ELAN software packages can be operated through verbal commands, through the telephone keypad or through the IBM PC keyboard. The computer can then respond verbally, either by telephone or 'in person'.

\*ELAN (Extended Local Area Network) formerly ComNet

The Manager

The MANAGER system adds a modem for telephone data communications and by adding a separate handset, will permit voice communications. The modem enables the MANAGER to receive unattended voice and data from any telephone in the U.S. Also, the MANAGER can accept commands through decoding the tones from the telephone keypad.

The EXECUTIVE is the most complete implementation of ELAN, adding computer recognition of spoken commands. An executive might phone the PC to leave or retrieve messages or request specific information. The PC, in a spoken voice, can request a user's access code or prompt the user for a command. The executive can respond either by pushing buttons on the telephone, or by actually speaking back to the computer.

The SECRETARY is the basic ELAN system. It includes an Ethernet interface and all other ELAN features except modem and voice recognition.

Whether you choose the EXECUTIVE, MANAGER or SECRETARY, an ELAN system will improve your productivity and expand the versatility of your IBM PC.

The Secretary
